For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.47.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.62.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

Territory No. 3 - Eastern, excl. N. E.
but incl. No. Ill.

1/ Based on a tare weight of 20.9 tons and a ratio of empty car miles to loaded car miles of 1.006. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.14.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.47.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.62.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 20.—TERRITORY NO. 3 - EASTERN, excluding New England but including Northern Illinois

1/ Based on a tare weight of 27.3 tons and a ratio of empty car miles to loaded car miles of 0.869. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.14.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.47.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.62.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 21.—TERRITORY NO. 3 - EASTERN, excluding New England but including Northern Illinois

LESS-CARLOAD COST SCALES BASED ON SHIPMENTS MOVING IN BOX CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 23.3 tons and a ratio of empty car miles to loaded car miles of 0.350. The Less-carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Less-carload operating expenses, rents and taxes, plus a return at 4 percent upon the less-carload portion of the value, multiply by 1.21.

For Cost Level III(b), Less-carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the less-carload portion of the value, multiply by 1.31.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds on less-carload traffic. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 23.0 tons and a ratio of empty car miles to loaded car miles of 0.340. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.14.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.63.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 22 (Concluded).—TERRITORY NO. 4 - TOTAL EASTERN, including New England and Northern Illinois

CARLOAD COST SCALES FOR COMMODITIES MOVING IN BOX CARS

1/ Based on a tare weight of 23.0 tons and a ratio of empty car miles to loaded car miles of 0.340. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.14.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.63.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 23.—TERRITORY NO. 4 - TOTAL EASTERN, including New England and Northern Illinois

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 20.5 tons and a ratio of empty car miles to loaded car miles of 0.838. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.14.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.63.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 23 (Concluded).—TERRITORY NO. 4 - TOTAL EASTERN, including New England and Northern Illinois

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 20.5 tons and a ratio of empty car miles to loaded car miles of 0.838. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.
For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.
For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.
For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.14.
For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.
For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.63.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 22.0 tons and a ratio of empty car miles to loaded car miles of 0.845. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.14.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.63.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 24 (Concluded).--TERRITORY NO. 4 - TOTAL EASTERN, including New England and Northern Illinois

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.0 tons and a ratio of empty car miles to loaded car miles of 0.845. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.14.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.63.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

Territory No. 4 - Total Eastern, incl.
N. E. & No. Ill.

TANK CARS

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.983. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.14.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion; multiply by 1.63.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 25 (Concluded).--TERRITORY NO. 4 - TOTAL EASTERN, including New England and Northern Illinois

CARLOAD COST SCALES FOR COMMODITIES MOVING IN TANK CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.983. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.3[illegible].

For Cost Level IV, Carload operating expences, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.14.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.63.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 26.—TERRITORY NO. 4 - TOTAL EASTERN, including New England and Northern Illinois

CARLOAD COST SCALES FOR COMMODITIES MOVING IN STOCK CARS

1/ Based on a tare weight of 20.9 tons and a ratio of empty car miles to loaded car miles of 1.005. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.14.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.63.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 27.—TERRITORY NO. 4 - TOTAL EASTERN, including New England and Northern Illinois

CARLOAD COST SCALES FOR COMMODITIES MOVING IN REFRIGERATOR CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 27.3 tons and a ratio of empty car miles to loaded car miles of 0.867. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.14.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.63.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 28.--TERRITORY NO. 4 - TOTAL EASTERN, including New England and Northern Illinois

LESS-CARLOAD COST SCALES BASED ON SHIPMENTS MOVING IN BOX CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 23.0 tons and a ratio of empty car miles to loaded car miles of 0.340. The Less-carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Less-carload operating expenses, rents and taxes, plus a return at 4 percent upon the less-carload portion of the value, multiply by 1.21.

For Cost Level III(b), Less-carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the less-carload portion of the value, multiply by 1.31.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds on less-carload traffic. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 24.0 tons and a ratio of empty car miles to loaded car miles of 0.330. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.09.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.35.

For Cost Level V(b), Carload operating expenses, rents and taxes plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.47.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 24.0 tons and a ratio of empty car miles to loaded car miles of 0.330. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.09.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.35.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.47.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 30.—TERRITORY NO. 5 - POCAHONTAS

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of [illegible] tons and a ratio of empty car miles to loaded car miles of 0.568. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.09.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.35.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.47.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 30 (Concluded).—TERRITORY NO. 5 - POCAHONTAS

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 19.4 tons and a ratio of empty car miles to loaded car miles of 0.568. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.09.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.35.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.47.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 22.1 tons and a ratio of empty car miles to loaded car miles of 0.928. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.09.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.35.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.47.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 22.1 tons and a ratio of empty car miles to loaded car miles of 0.928. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.09.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.35.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.47.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 32.—TERRITORY NO. 5 - POCAHONTAS

CARLOAD COST SCALES FOR COMMODITIES MOVING IN TANK CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.999. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.09.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.35.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.47.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 32 (Concluded).--TERRITORY NO. 5 - POCAHONTAS

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.999. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.09.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.35.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.47.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 20.8 tons and a ratio of empty car miles to loaded car miles of 1.500. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.09.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.35.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.47.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 27.3 tons and a ratio of empty car miles to loaded car miles of 0.696. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.09.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.35.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.47.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 35.--TERRITORY NO. 5 - POCAHONTAS

LESS-CARLOAD COST SCALES BASED ON SHIPMENTS MOVING IN BOX CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 24.0 tons and a ratio of empty car miles to loaded car miles of 0.330. The Less-carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Less-carload operating expenses, rents and taxes, plus a return at 4 percent upon the less-carload portion of the value, multiply by 1.21.

For Cost Leve III(b), Less-carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the less-carload portion of the value, multiply by 1.30.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds on less-carload traffic. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 22.4 tons and a ratio of empty car miles to loaded car miles of 0.294. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.16.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage paym per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter hav been increased by ratios shown.

See Text, Chapter I for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 36 (Concluded).—TERRITORY NO. 6 - SOUTHERN

CARLOAD COST SCALES FOR COMMODITIES MOVING IN BOX CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.4 tons and a ratio of empty car miles to loaded car miles of 0.294. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.16.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 37.—TERRITORY NO. 6 - SOUTHERN

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 19.0 tons and a ratio of empty car miles to loaded car miles of 0.789. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.16.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 37 (Concluded).—TERRITORY NO. 6 - SOUTHERN

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 19.0 tons and a ratio of empty car miles to loaded car miles of 0.789. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.16.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 38.—TERRITORY NO. 6 - SOUTHERN

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 21.2 tons and a ratio of empty car miles to loaded car miles of 0.918. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.16.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 21.2 tons and a ratio of empty car miles to loaded car miles of 0.918. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is commuted at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.16.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 39.--TERRITORY NO. 6 - SOUTHERN

CARLOAD COST SCALES FOR COMMODITIES MOVING IN TANK CARS

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.960. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.16.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 39 (Concluded).--TERRITORY NO. 6 - SOUTHERN

CARLOAD COST SCALES FOR COMMODITIES MOVING IN TANK CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.960. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.16.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

Territory No. - - Southern

1/ Based on a tare weight of 20.5 tons and a ratio of empty car miles to loaded car miles of 0.897. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.16.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 27.3 tons and a ratio of empty car miles to loaded car miles of 0.846. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.30.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.18.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 65 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

5310

1/ Based on a tare weight of 22.4 tons and a ratio of empty car miles to loaded car miles of 0.294. The Less-carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Less-carload operating expenses, rents and taxes, plus a return at 4 percent upon the less-carload portion of the value, multiply by 1.21.

For Cost Level III(b), Less-carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the less-carload portion of the value, multiply by 1.30.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds on less-carload traffic. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 22.9 tons and a ratio of empty car miles to loaded car miles of 0.378. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.20.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.29.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.62.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 43 (Concluded).—TERRITORY NO. 7 - SOUTHWESTERN, including Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN BOX CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.9 tons and a ratio of empty car miles to loaded car miles of 0.378. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.20.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.29.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.62.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 44.--TERRITORY NO. 7 - SOUTHWESTERN, including Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 18.5 tons and a ratio of empty car miles to loaded car miles of 0.576. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.20.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.29.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value; including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.62.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 44 (Concluded).--TERRITORY NO. 7 - SOUTHWESTERN, including Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 18.5 tons and a ratio of empty car miles to loaded car miles of 0.676. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.20.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.29.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.62.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 45.--TERRITORY NO. 7 - SOUTHWESTERN, including Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 21.9 tons and a ratio of empty car miles to loaded car miles of 0.802. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.20.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.29.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.62.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 45 (Concluded).--TERRITORY NO. 7 - SOUTHWESTERN, including Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 21.9 tons and a ratio of empty car miles to loaded car miles of 0.802. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.20.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.29.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.62.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

Territory No. 7 - Southwestern, incl.
Southern Missouri

TANK CARS

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.955. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.20.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.29.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.62.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 46 (Concluded).—TERRITORY NO. 7 - SOUTHWESTERN, including Southern Missouri

1/ Based on a tare weight of 21.0 tons and a ratio of empty car miles to loaded car miles of 0.332. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.20.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.29.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.62.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 48.—TERRITORY NO. 7 - SOUTHWESTERN, including Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN REFRIGERATOR CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 27.3 tons and a ratio of empty car miles to loaded car miles of 0.658. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.20.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.29.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.49.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.62.

Note: The above costs do not include an allowance for loss and damage. See Table 65 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 22.9 tons and a ratio of empty car miles to loaded car miles of 0.378. The Less-carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Less-carload operating expenses, rents and taxes, plus a return at 4 percent upon the less-carload portion of the value, multiply by 1.20.

For Cost Level III(b), Less-carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the less-carload portion of the value, multiply by 1.29.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds on less-carload traffic. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes these expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 22.0 tons and a ratio of empty car miles to loaded car miles of 0.341. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.57.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.72.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 50 (Concluded).—TERRITORY NO. 8 - WESTERN TRUNK LINE, excluding Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN BOX CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.0 tons and a ratio of empty car miles to loaded car miles of 0.341. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.57.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.72.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 51.—TERRITORY NO. 8 - WESTERN TRUNK LINE, excluding Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 19.1 tons and a ratio of empty car miles to loaded car miles of 0.703. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.57.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.72.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 51 (Concluded).—TERRITORY NO. 5 - WESTERN TRUNK LINE, excluding Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 19.1 tons and a ratio of empty car miles to loaded car miles of 0.703. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.57.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.72.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 52.--TERRITORY NO. 8 - WESTERN TRUNK LINE, excluding Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 21.0 tons and a ratio of empty car miles to loaded car miles of 0.530. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.57.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.72.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 52 (Concluded).—TERRITORY NO. 8 - WESTERN TRUNK LINE, excluding Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 21.0 tons and a ratio of empty car miles to loaded car miles of 0.530. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.57.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.72.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 53.--TERRITORY NO. 8 - WESTERN TRUNK LINE, excluding Northern Illinois and Southern Missouri

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.990. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.57.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.72.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 53 (Concluded).—TERRITORY NO. 8 - WESTERN TRUNK LINE, excluding Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN TANK CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.990. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.57.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.72.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 54.--TERRITORY NO. 6 - WESTERN TRUNK LINE, excluding Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN STOCK CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

Miles	Net load in tons per car

---

1/ Based on a tare weight of 20.1 tons and a ratio of empty car miles to loaded car miles of 0.906. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.57.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.72.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 55.—TERRITORY NO. 8 - WESTERN TRUNK LINE, excluding Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN REFRIGERATOR CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 27.3 tons and a ratio of empty car miles to loaded car miles of 0.698. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.57.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.72.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 56.--TERRITORY NO. 8 - WESTERN TRUNK LINE, excluding Northern Illinois and Southern Missouri

LESS-CARLOAD COST SCALES BASED ON SHIPMENTS MOVING IN BOX CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 [1]

---

[1] Based on a tare weight of 22.0 tons and a ratio of empty car miles to loaded car miles of 0.341. The Less-carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Less-carload operating expenses, rents and taxes, plus a return at 4 percent upon the less-carload portion of the value, multiply by 1.22.

For Cost Level III(b), Less-carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the less-carload portion of the value, multiply by 1.32.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds on less-carload traffic. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

[2] Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

[3] Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 22.0 tons and a ratio of empty car miles to loaded car miles of 0.341. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.59.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.74.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 57 (Concluded).—TERRITORY NO. 9 - WESTERN TRUNK LINE, including Northern Illinois but excluding Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN BOX CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.0 tons and a ratio of empty car miles to loaded car miles of 0.341. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.59.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.74.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 58.--TERRITORY NO. 9 - WESTERN TRUNK LINE, including Northern Illinois but excluding Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 19.1 tons and a ratio of empty car miles to loaded car miles of 0.703. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.59.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.74.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 19.1 tons and a ratio of empty car miles to loaded car miles of 0.703. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.59.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.74.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 59.—TERRITORY NO. 9 - WESTERN TRUNK LINE, including Northern Illinois but excluding Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 21.0 tons and a ratio of empty car miles to loaded car miles of 0.830. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.59.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.74.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 59 (Concluded).—TERRITORY NO. 9 - WESTERN TRUNK LINE, including Northern Illinois but excluding Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

sed on a tare weight of 21.0 tons and a ratio of empty car miles to loaded car miles of 0.830. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.59.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.74.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 60.--TERRITORY NO. 9 - WESTERN TRUNK LINE, including Northern Illinois but excluding Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN TANK CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.390. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.59.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.74.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 60 (Concluded).--TERRITORY NO. 9 - WESTERN TRUNK LINE, including Northern Illinois but excluding Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN TANK CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.990. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.59.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.74.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

Territory No. 9 - Western Trunk Line, incl.
No. Ill. but excl.
Sou. Mo.

1/ Based on a tare weight of 20.1 tons and a ratio of empty car miles to loaded car miles of 0.906. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.59.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.74.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 62.--TERRITORY NO. 9 - WESTERN TRUNK LINE, including Northern Illinois but excluding Southern Missouri

1/ Based on a tare weight of 27.3 tons and a ratio of empty car miles to loaded car miles of 0.698. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.23.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.59.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.74.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 63.—TERRITORY NO. 9 - WESTERN TRUNK LINE, including Northern Illinois but excluding Southern Missouri

1/ Based on a tare weight of 22.0 tons and a ratio of empty car miles to loaded car miles of 0.341. The Less-carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Less-carload operating expenses, rents and taxes, plus a return at 4 percent upon the less-carload portion of the value, multiply by 1.23.

For Cost Level III(b), Less-carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the less-carload portion of the value, multiply by 1.33.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds on less-carload traffic. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

For mechanical reasons, this page number not shown

INTENTIONALLY LEFT BLANK

1/ Based on a tare weight of 22.7 tons and a ratio of empty car miles to loaded car miles of 0.333. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.23.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.33.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.55.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.71.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 64 (Concluded).—TERRITORY NO. 10 - MOUNTAIN PACIFIC

CARLOAD COST SCALES FOR COMMODITIES MOVING IN BOX CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.7 tons and a ratio of empty car miles to loaded car miles of 0.333. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.23.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.33.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.55.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.71.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 65.—TERRITORY NO. 10 - MOUNTAIN PACIFIC

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 16.1 tons and a ratio of empty car miles to loaded car miles of 0.760. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.23.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.33.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.55.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.71.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 65 (Concluded).—TERRITORY NO. 10 - MOUNTAIN PACIFIC

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 16.1 tons and a ratio of empty car miles to loaded car miles of 0.760. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.23.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.33.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.55.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload ng deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.71.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 66.--TERRITORY NO. 10 - MOUNTAIN PACIFIC

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 23.3 tons and a ratio of empty car miles to loaded car miles of 0.789. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.23.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.33.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.55.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.71.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 66 (Concluded).--TERRITORY NO. 10 - MOUNTAIN PACIFIC

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 23.3 tons and a ratio of empty car miles to loaded car miles of 0.789. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.23.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.33.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.55.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.71.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 67.--TERRITORY NO. 10 - MOUNTAIN PACIFIC

CARLOAD COST SCALES FOR COMMODITIES MOVING IN TANK CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 1.000. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.23.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.33.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.55.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.71.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 67 (Concluded).—TERRITORY NO. 10 - MOUNTAIN PACIFIC

CARLOAD COST SCALES FOR COMMODITIES MOVING IN TANK CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 1.000. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.23.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.33.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value including the less-carload and passenger portion, multiply by 1.55.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.71.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 68.—TERRITORY NO. 10 - MOUNTAIN PACIFIC

CARLOAD COST SCALES FOR COMMODITIES MOVING IN STOCK CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 19.6 tons and a ratio of empty car miles to loaded car miles of 0.879. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.23.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.33.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.55.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.71.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 69.—TERRITORY NO. 10 - MOUNTAIN PACIFIC

CARLOAD COST SCALES FOR COMMODITIES MOVING IN REFRIGERATOR CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 27.3 tons and a ratio of empty car miles to loaded car miles of 0.734. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.23.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.33.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.20.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.55.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.71.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 70.—TERRITORY NO. 10 - MOUNTAIN PACIFIC

LESS-CARLOAD COST SCALES BASED ON SHIPMENTS MOVING IN BOX CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.7 tons and a ratio of empty car miles to loaded car miles of 0.333. The Less-carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Less-carload operating expenses, rents and taxes, plus a return at 4 percent upon the less-carload portion of the value, multiply by 1.22.

For Cost Level III(b), Less-carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the less-carload portion of the value, multiply by 1.31.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds on less-carload traffic. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 22.5 tons and a ratio of empty car miles to loaded car miles of 0.351. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.21.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.56.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.70.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 71 (Concluded).—TERRITORY NO. 11 - TOTAL WESTERN, including Southwestern, Western Trunk Line, Mountain Pacific, Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN BOX CARS

1/ Based on a tare weight of 22.5 tons and a ratio of empty car miles to loaded car miles of 0.351. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.
For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.
For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.
For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.21.
For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.56.
For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.70.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 72.—TERRITORY NO. 11 - TOTAL WESTERN, including Southwestern, Western Trunk Line, Mountain Pacific, Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 17.4 tons and a ratio of empty car miles to loaded car miles of 0.723. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.21.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.56.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.70.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 72 (Concluded).--TERRITORY NO. 11 - TOTAL WESTERN, Including Southwestern, Western Trunk Line, Mountain Pacific, Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

Miles	Net load in tons per car																														Miles

1/ Based on a tare weight of 17.4 tons and a ratio of empty car miles to loaded car miles of 0.723. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.21.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.56.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.70.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 73.--TERRITORY NO. 11 - TOTAL WESTERN, including Southwestern, Western Trunk Line, Mountain Pacific, Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 21.7 tons and a ratio of empty car miles to loaded car miles of 0.812. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.21.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.56.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.70.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 73 (Concluded).—TERRITORY NO. 11 - TOTAL WESTERN, including Southwestern, Western Trunk Line, Mountain Pacific, Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 [1]

---

[1] Based on a tare weight of 21.7 tons and a ratio of empty car miles to loaded car miles of 0.812. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.21.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.56.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.70.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

[2] Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

[3] Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 74.—TERRITORY NO. 11 - TOTAL WESTERN, including Southwestern, Western Trunk Line,
Mountain Pacific, Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN TANK CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for [illegible] 1/

Net load in tons per car

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.977. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.21.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.56.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.70.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 74 (Concluded).--TERRITORY NO. 11 - TOTAL WESTERN, including Southwestern, Western Trunk Line, Mountain-Pacific, Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN TANK CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.977. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.21.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.56.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.70.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

Territory No. 11 - Total Western, incl. Southwestern,
West. Trunk Line, Mt. Pac.,
No. Illinois and Sou. Missouri.

STOCK CARS

1/ Based on a tare weight of 20.1 tons and a ratio of empty car miles to loaded car miles of 0.880. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.21.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.56.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.70.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 76.—TERRITORY NO. 11 - TOTAL WESTERN, including Southwestern, Western Trunk Line, Mountain Pacific, Northern Illinois and Southern Missouri

CARLOAD COST SCALES FOR COMMODITIES MOVING IN REFRIGERATOR CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 27.3 tons and a ratio of empty car miles to loaded car miles of 0.695. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.22.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.32.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.21.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.56.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.70.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

Territory No. 11 - Total Western, incl. Southwestern,
West. Trunk Line, Mt. Pac.,
No. Illinois and Sou. Missouri

LESS-CARLOAD

TABLE 77.—TERRITORY NO. 11 - TOTAL WESTERN, including Southwestern, Western Trunk Line, Mountain Pacific, Northern Illinois and Southern Missouri

LESS-CARLOAD COST SCALES BASED ON SHIPMENTS MOVING IN BOX CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.5 tons and a ratio of empty car miles to loaded car miles of 0.351. The Less-carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Less-carload operating expenses, rents and taxes, plus a return at 4 percent upon the less-carload portion of the value, multiply by 1.22.

For Cost Level III(b), Less-carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the less-carload portion of the value, multiply by 1.32.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds on less-carload traffic. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.335. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.17.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 78 (Concluded).--TERRITORY NO. 12 - TOTAL UNITED STATES

CARLOAD COST SCALES FOR COMMODITIES MOVING IN BOX CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.335. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below: The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.17.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 79.—TERRITORY NO. 12 - TOTAL UNITED STATES

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 18.1 tons and a ratio of empty car miles to loaded car miles of 0.748. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.17.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 79 (Concluded).--TERRITORY NO. 12 - TOTAL UNITED STATES

CARLOAD COST SCALES FOR COMMODITIES MOVING IN FLAT CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 18.1 tons and a ratio of empty car miles to loaded car miles of 0.748. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.17.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 80.—TERRITORY NO. 12 - TOTAL UNITED STATES

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 [1]

[1] Based on a tare weight of 21.9 tons and a ratio of empty car miles to loaded car miles of 0.857. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.23.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.17.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

[2] Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

[3] Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 80 (Concluded).--TERRITORY NO. 12 - TOTAL UNITED STATES

CARLOAD COST SCALES FOR COMMODITIES MOVING IN GONDOLA AND HOPPER CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 21.9 tons and a ratio of empty car miles to loaded car miles of 0.857. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.17.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 81.--TERRITORY NO. 12 - TOTAL UNITED STATES

CARLOAD COST SCALES FOR COMMODITIES MOVING IN TANK CARS

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.977. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.17.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portions, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portions, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 81 (Concluded).--TERRITORY NO. 12 - TOTAL UNITED STATES

CARLOAD COST SCALES FOR COMMODITIES MOVING IN TANK CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.977. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.17.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

5409

1/ Based on a tare weight of 20.4 tons and a ratio of empty car miles to loaded car miles of 0.919. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.17.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 83.—TERRITORY NO. 12 - TOTAL UNITED STATES

CARLOAD COST SCALES FOR COMMODITIES MOVING IN REFRIGERATOR CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 27.3 tons and a ratio of empty car miles to loaded car miles of 0.795. The Carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Carload operating expenses, rents and taxes, plus a return at 4 percent upon the carload portion of the value, multiply by 1.21.

For Cost Level III(b), Carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the carload portion of the value, multiply by 1.31.

For Cost Level IV, Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, but excluding return, multiply by 1.17.

For Cost Level V(a), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.50.

For Cost Level V(b), Carload operating expenses, rents and taxes, plus the passenger and less-carload operating deficits, and a return at 5-3/4 percent upon the total value, including the less-carload and passenger portion, multiply by 1.65.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds by commodity groups and by territories. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

TABLE 84.--TERRITORY NO. 12 - TOTAL UNITED STATES

LESS-CARLOAD COST SCALES BASED ON SHIPMENTS MOVING IN BOX CARS

Cost in Cents per Hundred Pounds, Based on Freight Operating Expenses, Rents and Taxes for 1939 1/

1/ Based on a tare weight of 22.8 tons and a ratio of empty car miles to loaded car miles of 0.335. The Less-carload cost study provides for several levels of cost. Cost Level II is that shown in this table. Compute the cost for other levels by multiplying the costs shown herein by the ratios shown below. The return is computed at both 4 percent and 5-3/4 percent.

For Cost Level III(a), Less-carload operating expenses, rents and taxes, plus a return at 4 percent upon the less-carload portion of the value, multiply by 1.21.

For Cost Level III(b), Less-carload operating expenses, rents and taxes, plus a return at 5-3/4 percent upon the less-carload portion of the value, multiply by 1.31.

Note: The above costs do not include an allowance for loss and damage. See Table 85 herein for loss and damage payments per 100 pounds on less-carload traffic. Payments to be added to cost scales after latter have been increased by ratios shown.

See Text, Chapter I, for a discussion of the economic significance of each of the above levels of cost.

2/ Terminal expenses per 100 pounds. Includes those expenses which are independent of the length of haul.

3/ Line-haul expenses per 100 pounds per mile. Includes those expenses which are variable with the length of haul. The factors shown for terminal and line-haul expenses were those used in compiling the cost scale.

For mechanical
reasons, this

35	Grand total, carload and l.c.l.	860	18,522,493	18,315,798,540	.101	35

1/ The amounts shown in this table include only the loss and damage payments as reported by the carriers in answer to a questionnaire dated November 19, 1940. The remaining charges to Account 418 have been treated as an overhead and are included in the figures shown in the cost scales. Reference appears in footnote 1 of each table of the cost scales directing the reader to Table 85 for loss and damage payments per 100 pounds by commodity groups and by territories. Subsequent to the completion of the cost scales the conclusion was reached that the loss and damage payments by territories based upon the traffic originated, and received from connections, would not be meaningful for the purpose intended. For this reason the loss and damage payments per hundred pounds by commodity groups are shown only for the United States as a whole. The costs per hundredweight were obtained by dividing the payments shown in column (3) by the hundredweight originated or terminated, whichever was the greater. (See column (4)). The amount of traffic by commodity groups was obtained from Freight Commodity Statistics, Statement 40100 (1939). The difference reported between the traffic originated and terminated by Class I carriers is occasioned by the interchange of such traffic with Class II and Class III carriers, Canadian and Mexican railroads, and switching and terminal companies. The larger figure more closely represents the volume of traffic handled. The loss and damage payments shown necessarily represent the amount applicable to the average length haul obtaining in the United States on the respective commodity groups.

Table 86.—Statement of Territorial Average Tare Weights and Ratios of Empty to Loaded Car Miles by Classes of Equipment for 1939 1/

1/ Tare weights are based on a weighted average of the tare weights for railroad owned equipment as reported by the carriers in reply to a questionnaire issued under date of November 19, 1940. Territorial averages obtained by weighting the weight reported by each carrier for each class of equipment by the number of carloads forwarded in such class of equipment by each carrier.
Ratios of empty to loaded car-miles are based on the data furnished by carriers in response to questionnaire under date of November 19, 1940. Territorial averages obtained by weighting the ratio of the empty to loaded car-miles reported by each carrier for each class of equipment by the number of carloads forwarded in such class of equipment by each carrier.

2/ Figures based on railroad owned equipment. United States average tare weights used for all territories in compiling cost scales.

3/ No information provided.

Table No. 87.—Territorial Summary of Aggregate Costs, Aggregate Units, Unit Costs, and the Computation of the Territorial Allowances for Less-carload Deficit, Passenger Deficit, and Return on the Value of the Property

Terri-tory No.	Territory	Group I Carload and less-carload freight-train car expenses - running, other than mileage cars			Group II Carload and less-carload other running expenses common to all cars, mileage and other				Group III Carload and less-carload remaining running expenses treated on a gross ton-mile basis			Group IV Carload switching expenses, origin or destination only, treated on per loaded car basis			Group IV Less-carload switching expenses, origin or destination only, treated on per loaded car basis			Terri-tory No.
		Expenses	Revenue car-miles, other than mileage cars - loaded and empty	Cost per revenue car-mile - loaded and empty (col.(1) ÷ col.(2))	Expenses	Total revenue car-miles including mileage cars, loaded and empty	Cost per revenue car-mile - loaded and empty (col.(4) ÷ col.(5))	Total cost per car-mile other than mileage cars (col.(3) + col.(6)) 1/	Expenses	Revenue gross ton-miles - cars and contents excluding caboose	Cost per revenue gross ton-mile (col.(8) ÷ col.(9))	Expenses	Cars switched, loads	Cost per loaded car (col.(11) ÷col.(12))	Expenses	Cars switched, loads	Cost per loaded car (col.(14) ÷ col.(15))

Table No. 87.—(Concluded) Territorial Summary of Aggregate Costs, Aggregate Units, Unit Costs, and the Computation of the Territorial Allowances for Less-carload Deficit, Passenger Deficit, and Return on the Value of the Property

Territory No.	Territory	Carload operating expenses, rents & taxes	Cost of providing 5-3/4% return on carload portion of value		Cost of providing 5-3/4% return on total freight value carload and less-carload		Cost of providing 5-3/4% return on total value freight and passenger		Cost of providing 4% return on carload portion of value		Cost of providing 4% return on total freight value carload and less-carload		Cost of providing 4% return on total value, freight and passengen.		Cost of providing current rate of return		
			Amount	Ratio of carload 5-3/4% ret. to carload oper. expe., rents and taxes (col. (61) + col. (60))	Amount	Ratio of total frt. 5-3/4% ret., carload and less-carload, to carload oper. expe., rents and taxes (col. (63) + col. (60))	Amount	Ratio of total 5-3/4% ret., frt. and pass., to carload oper. expe., rents & taxes (col. (65) + col. (60))	Amount	Ratio of carload 4% ret. to carload oper. expe., rents and taxes (col. (67) + col. (60))	Amount	Ratio of tot. frt. 4% ret., carload & less-carload, to carload oper. expe., rents and taxes (col. (69) + col. (60))	Amount	Ratio of tot. 4% ret., frt. & pass., to carload oper. expe., rents and taxes (col. (71) + col. (60))	Current return all services, 1939	Recommended value of property As of Dec. 31, 1939	Current rate of return, all services (col. (73) + col. (74))

Table 86.--Statement Showing the Procedure Used in the Assembly of Carload Unit Costs for the Purpose of Computing the Carload Cost Scales 1/

For Purposes of Illustration the Costs Shown Are Based on a Movement in Box Cars
The Expenses Are Those Compiled for the United States, Territory No. 17

Line No.	Net load per car tons	Expenses independent of distance (origin plus destination)						Expenses treated as proportional to the length of haul						Line No.
		Group IV - C.L. Industry and team track switching expense per loaded car 2/	Group VI - C.L. Carload freight train car maint. and rentals, switching serv. origin + dest. only, expense per loaded car 3/	Group VIII - C.L. Station clerical exp. so per carload 4/	Total C. L. switching expenses, freight train car expenses (terminal) and station expe., per loaded car (Cols. (2), (3), and (4))	Number of cwt. per net load per car (Col. (1) x 20 cwt.)	Switching freight train car maint., and station expenses per cwt. (Col. (5) + col. (6))	Group I - C. L. freight train car expenses - running, other than mileage cars, per loaded car-mile 5/	Group II - C.L. Running expe. common to all cars, incl. interchange and intertrain switching per loaded car-mile 6/	Gross tons of car & contents, incl. empty return (Col. (1) + footnote 1, line (d))	Group III - C.L. Remaining running expenses treated on GTM basis and converted to a cost per loaded car-mile (Col. (10) x .151 cents per GTM) 7/	Total running expe. stated in terms of loaded car-mile incl. empty ret. (Cols. (8), (9), and (11))	Running expe. per 100 pounds of net load per mile (Col. (12) + col. (6))

1/ (a) Territorial average tare weight: 22.8 tons. Computed by weighting the tare weight of each reporting carrier in the given territory by the number of carloads handled by each carrier in this type of car.
(b) Territorial ratio of empty to loaded car-miles: 33.5%. Computed by weighting the ratio for each reporting carrier in the territory for the type of car shown by the number of carloads handled by each carrier in this type of car.
(c) Equated empty tare tons: 7.638 tons. (Line (a) x line (b)).
(d) Total territorial tare weight: 30.438 tons. (Line (a) + line (c)).

2/ Table 87, twice column (13).

3/ Table 87, twice column (22). Where costs are developed for equipment rented on a mileage basis (refrigerator cars and tank cars) column (3) is not filled in, since the mileage rental is presumed to include maintenance and rentals chargeable to the terminal operations as well as the line haul.

4/ Table 87, twice column (31).

5/ Cost computed for loaded and empty directions in terms of the loaded direction only. Lines (a) and (b) used for railroad owned equipment and lines (c) and (d) for equipment rented on a mileage basis. The amounts from lines (b) or (d) are carried forward to column (8)

Item	Source	Amount	
		Railroad owned equipment	Cars rented on mileage basis
(a) R.R. owned equipment, cost per mile, loaded direction ..	Table 87, column (3).	1.537	xxx
(b) R.R. owned equipment, cost per mile, loaded + empty ret.	Line (a) x (1.0 + .335 ratio) from 1/, line (b)	2.052	xxx
(c) Equipment rented on mileage basis, cost per mile loaded direction	Cost per mile from AAR Mileage Tariffs, Series 7, x (1.0 + __ ratio of traffic general and misc. overheads and taxes to all other expenses incl. equip. rents.)	xxx	xxx
(d) Equipment rented on mileage basis, cost per mile loaded plus empty return	Line (c) x (1.0 + ________ ratio) from 1/, line (b)	xxx	xxx

6/ Cost computed for loaded and empty directions in terms of loaded direction only. Cost per car-mile from Table 87, column (6), 1.373 cents x (1.0 + .335 ratio) from 1/, line (b).

7/ Cost per gross ton-mile from Table 87, column (10).

Table 89.--Statement Showing the Procedure Used in the Assembly of Less-Carload Unit Costs for the Purpose of Computing the Less-Carload Cost Scales 1/ For Purposes of Illustration, the Expenses Are Those Compiled for the United States, Territory No. 12

Line No.	Expenses independent of distance (origin plus destination)									Expenses treated as proportional to the length of haul										Line No.
	Net load per less-carload car (tons)	Grp. IV Less-carload switching expenses, frthouse, per loaded car 2/	Grp. VI Less-carload frt. train car maint. & rentals switching expe. per loaded car 3/	Grps. IV & VI Switching plus freight train car expenses per ton (Cols. (2) + (3)) ÷ Col. (1))	Grp. VIII Less-carload station clerical expenses per ton 4/	Grp. IX Less-carload station platform handling per ton 5/	Total less-carload switching expe., frt. train car expe. (terminal) & station expe. per ton (Cols. (4), (5) and (6))	Number of cwt. per net load (Col. (1) x 20 cwt.)	Total switching frt. train car expe. (terminal) station clerical and platform expe. per cwt. (Col. (7) ÷ 20 cwt.)	Grp. I Less-carload frt. train expenses - running, per loaded car-mile 6/	Grp. II Less-carload running expe. common to all cars incl. interchange & intertrain switching per loaded car-mile 7/	Grp. V Less-carload freighthouse switching expe. acct. transfer stated in terms of loaded car-miles (Table 87, col. (19))	Grp. VII Less-carload frt. train car expe. (terminal) acct. transfer stated in terms of loaded car-miles (Table 87, col. (28))	Subtotal running expenses stated in terms of loaded car-miles, incl. empty return (Cols. (10), (11), (12) and (13))	Gross tons of car and contents, incl. empty return 8/	Grp. III Less-carload remaining running expe. treated on GTM basis and converted to cost per loaded car-mile (Col. (15) x .151 cents per GTM 9/	Subtotal running expe. treated on loaded car-mile basis, incl. empty return (Col. (14) + col. (16))	Subtotal running expe. per 100 lbs. of net load per mile (Col. (17) ÷ col. (8))	Total running expe. per 100 lbs. per mile, incl. station platform expe., account transfer (Col. (18) + .01113 cents per 100 lbs.) 10/

1/ Unless otherwise indicated, the less carload assembly is based on movement of less-carload traffic in box cars.
2/ From Table 87, twice column (16).
3/ From Table 87, twice column (25).
4/ From Table 87, twice column (34).
5/ From Table 87, twice column (37).
6/ Cost computed for loaded and empty directions in terms of the loaded direction only. Amount for line (b) carried forward to column (10).

	Item	Source	Amount
(a)	Cost per mile, loaded direction	Table 87, column (3)	1.537
(b)	Cost per mile, loaded plus empty return	Line (a) x (1.0 + .335 ratio) See Table 88 1/, line (b)	2.052

7/ Cost computed for loaded and empty directions in terms of loaded direction only. Cost per car-mile from Table 88, column (9).
8/ Computed as follows: Column (1) + 30.438 tare tons, loaded plus empty direction, from Table 88, footnote 1, line (d).
9/ Cost per gross ton-mile from Table 87, column (10).
10/ Cost per net ton mile .2225 (cents), from Table 87, column (40) divided by 20 cwt.

701A	Forwarder traffic included in Class 701	10.6	11.3	11.2	14.3	12.4	14.1	14.9	12.2

1/ The average load is obtained by dividing the number of tons of total freight traffic by the number of carloads, Freight Commodity Statistics Statement No. 40100 (1939) Table 3. The railroads included in each of the regions and districts listed are the same as those used for the purpose of compiling the Freight Commodity Statistics, with the exception of the Eastern district. See footnote 2.

2/ Based on combination of data shown for Great Lakes Region and Central Eastern Region.

Note:--The average load per car represents an average based on the sum of the tons originated and the tons received from connections divided by the corresponding number of carloads, thereby including duplications in each territory. This is necessary to give effect in each territory to the total traffic handled. The average load per car originated would differ slightly from the averages shown. For the average load of less-carload traffic see text p. 35.

(Name of Carrier)

TABLE OF CONTENTS

Schedule A, Sheet 1	-	System freight statistics and locomotive repair expenses separated between territories.
Schedule A, Sheet 2	-	Equipment maintenance and rental expenses separated by classes of equipment and by territories.
Schedule A, Sheet 3	-	Computation of car-miles and car-days in running, switching, and loading and unloading services and a separation of the mileage and time portion of the freight-train car expenses by territories.
Schedule B, Sheet 1	-	System freight maintenance of way expenses separated between territories and special services.
Schedule B, Sheet 2	-	Territorial freight maintenance of way expenses separated between running, switching, station service, general overhead, and special services.
Schedule C, Sheet 1	-	System freight transportation expenses separated between territories.
Schedule C, Sheet 2	-	Territorial freight transportation expenses separated between running, switching, station service, general overhead, and special services.
Schedule D, Sheet 1	-	Computation of territorial unit costs in station service.
Schedule E, Sheet 1	-	Computation of the ratio of traffic, general and miscellaneous overhead, and taxes to the remaining operating expenses.
Schedule E, Sheet 2	-	Computation of the revenue gross ton-miles and the revenue freight portion of the total freight operating expenses.
Schedule E, Sheet 3	-	Computation of the less-carload and passenger deficiencies and the ratio of such deficiencies to carload operating expenses, rents and taxes.
Schedule F, Sheet 1	-	Separation of the total rate-making value between less-carload freight traffic, carload freight traffic, and passenger traffic, and the computation of the ratio of the cost of providing the specified returns to the less-carload and carload operating expenses, rents and taxes.
Schedule F, Sheet 2	-	Separation of the value of road and equipment by territories and by services.
Schedule F, Sheet 3	-	Separation of the value of equipment by territories.
Schedule G	-	Summary of loss and damage payments by commodity groups.
Schedule H, Sheet 1	-	Summary of carrier operating expenses, rents and taxes by expense groups.
Schedule H, Sheet 2	-	Footnotes for Schedule H, Sheet 1.
Schedule H, Sheet 3	-	Separation of switching expenses by classes of switching.
Territorial Summary, Sheets 1-8	-	Territorial summary of aggregate costs, aggregate units and unit costs.
Loss and Damage Summary	-	Loss and damage payments by commodity groups. (Each sheet provides for two commodity groups. Use as many sheets as necessary to provide for all commodities).
Carload Assembly Schedule, Sheet 1	-	Assembly of costs for net loads of from 5 to 34 tons, inclusive.
Carload Assembly Schedule, Sheet 2	-	Assembly of costs for net loads of from 35 to 64 tons, inclusive.
Less-carload Assembly Schedule, Sheet 1	-	Assembly of costs for less-carload traffic.
Territorial Carload Cost Scales, Sheet 1	-	Carload distance cost scales based on net loads of 5 to 19 tons, inclusive, and hauls of 10 to 500 miles. (Additional sheets were used as needed to provide for net loads of more than 19 tons and hauls of more than 500 miles).
Less-carload Cost Scales	-	Less-carload distance cost scales for net loads of from 1.0 to 7.5 tons and hauls of from 10 to 3,500 miles, inclusive. (Additional sheets were used as needed to provide for net loads of more than 7.5 tons).

INTRODUCTORY REMARKS

1. (a) This rail cost formula, designated as Rail - Form A, is one of several developed by the Bureau of Statistics for use in different types of cases. Form A is intended to develop costs based upon respondent's system average operations, including main and branch lines, through and way trains, and large and small terminals.

(b) The formula provides for several levels of cost based upon a distribution of respondent's operating expenses, rents and taxes, and return on value, to the movement of the traffic, giving consideration to the following:

1. Length of haul,
2. Net weight of load,
3. Tare weight of car,
4. Percent of empty return movement of the equipment,
5. Volume of switching service (carload versus less-carload),
6. Car rental expenses paid, if any.

The levels of cost are as follows:

I. Carload and less-carload out-of-pocket costs. (Based on the application of the formula to the out-of-pocket portion of each account).

II. Carload and less-carload freight operating expenses, rents and taxes.

III(a). Carload and less-carload operating expenses, rents and taxes, plus an allowance for a return at 4 percent, upon the carload and less-carload portions of the value of the property.

III(b). Carload and less-carload operating expenses, rents and taxes, plus an allowance for a return at 5-3/4 percent upon the carload and less-carload portions of the value of the property.

IV. Carload operating expenses, rents and taxes, plus less-carload and passenger operating deficits, but excluding return.

V(a). Carload operating expenses, rents and taxes, plus less-carload and passenger operating deficits and a return at 4 percent upon the total value of the property, including the less-carload and passenger portions.

V(b). Carload operating expenses, rents and taxes, plus less-carload and passenger operating deficits, and a return at 5-3/4 percent upon the total value of the property, including the less-carload and passenger portions.

(c) The formula provides for the computation of the passenger and less-carload deficits. These deficits represent that portion of the total operating expenses, rents and taxes (with and without an allowance for return) which were assigned to the passenger and less-carload services and which the revenues from those services during the annual period covered by the study were unable to meet. The amount of the deficit apportioned to any given carload traffic movement is based upon the freight service expenses assigned assigned and apportioned to such carload traffic, i.e., the distribution is based on the relative use which such carload traffic itself makes of respondent's transportation facilities. No consideration is given to the commodity's relative ability to pay.

1 - Continued

(d) The respective levels of cost developed by the formula serve to indicate that average revenue which each 100 pounds of freight would have had to earn during the period studied (considering the length of haul, net weight of load, percent of empty return movement and tare weight of the equipment) to cover the elements of cost indicated. The nature of the commodity carried receives consideration in these scales only through the variation in load per car, and type of car used. Loss and damage receives separate consideration apart from the scales.

(e) This formula does not reflect those rate-making factors which occasion differences in rates which cannot be justified under a strict adherence to a cost of service principle. Such factors include ability to pay, value of service, value of commodity, competitive relationships, degree of manufacture, etc.

2. The steps in filling out this questionnaire are as follows:
   (a) Fill out Schedules A, B, C, D, E, F, G, and H from the accounting and statistical sources indicated.
   (b) Fill out the Territorial Summaries from the sources indicated.
   (c) Fill out the carload and less-carload assembly schedules from the sources indicated.
   (d) Fill out the carload and less-carload cost scales from the sources indicated.

3. Apportionment factors shown throughout the formula should be used only in the absence of data permitting direct assignment.

4. Where cost scales are being developed for individual carriers, observe the following:

(a) In the development of the unit costs respondent should not include the joint facility debits and credits where it does not also include in its statistics the corresponding service units. (For example, if respondent's expenses include joint facility debits for yard engine operations performed for it by others, but its statistics do not include the corresponding yard engine hours performed, its costs per yard engine hour will be overstated. Similarly, if respondent performs switching service for others and includes in its statistics the total engine hours for such work performed, its cost per engine hour will be understated, unless it excludes the corresponding joint facility credit for the amount billed others). Such debits and credits should be assigned to the columns designated "Special services" when they will significantly affect the computation of the unit costs. See paragraph (b) for instructions in this respect.

(b) Where an annual debit or credit of the nature outlined in (a) above exceeds $_______ for an individual facility (freight portion only) assign such debit or credit to the column designated "Special services". Distribute the remaining joint facility debits and credits on the basis indicated in each schedule hereto.

1/ Name the divisions assigned to each territory for the purpose of Schedules A, B. & C of this statement:

______________ Territory includes ______________________________ (Div's)
______________________________ (Div's)
______________ Territory includes ______________________________ (Div's)
______________________________ (Div's)
______________ Territory includes ______________________________ (Div's)
______________________________ (Div's)

2/ A.R. Schedule 531, item 61, column (b) minus caboose ton-miles. Compute the caboose ton-miles by multiplying the caboose car-miles by the average weight of a caboose.

3/ Designate the classes or groups for which the carrier currently compiles its repair costs. The class designation is that used by the carrier for managerial purposes.

4/ Weight of locomotive, including tender two-thirds loaded.

5/ Locomotive miles include principal, helper and light and train switching (if latter available).

Footnotes for Schedule A, sheet 2

1/ Repairs to floating equipment to be separated between line and terminal from information supplied by the carriers, where necessary.

2/ Compute depreciation as follows: (Where carrier has no regularly assigned yard engines, omit Parts I.-II, III, and apply Part IV)

Part I. Depreciation - Steam locomotives

Item	Source	Amount
(a) Road portion of loco. tons (given weight of 1.2 per Eng. Section, Bu. of Val.)	A.R.Sch.417, p.405, col.(z), (lines 1 plus 2 plus 3) x 1.2	tons
(b) Yd. portion of loco. tons (wt. given 1.0)	A.R.Sch.417, p.405, line 4, col.(z)	tons
(c) Total rd. plus yd. portion loco. tons.	Lines (a) plus (b)	tons
(d) Yd. portion of total tons	Line (b) divided by line (c)	ratio
(e) Total depreciation expense (frt. and passenger)	A.R.Sch. 320, page 308, line 132, col. (b)	$
(f) Yard portion of total depreciation ...	Lines (d) x (e)	$
(g) Ratio of yd. switching loco. miles, frt., to total yd. switching loco. miles	A.R.Sch. 531, p.508, item 25, col.(b) divided by col.(d)	ratio
(h) Frt. port. of yd. loco. depreciation .	Line (f) x line (g)	$
(i) Tot. loco. deprec., frt., road and yard.	A.R.Sch.320, line 132, col.(e)	$
(j) Deprec. steam locos., frt., road portion.	Line (i) minus line (h)	$

Part II. Depreciation - Other locomotives

Item	Source	Amount
(k) Tot. weight of internal combustion switchers (yd.)	A.R.Sch.419, col.(j), line 1 x line 7	tons
(l) Wt. of electric locos., switching (yard)	A.R.Sch.417, line 8, col.(z)	tons
(m) Tot. wt. internal combustion and electric locomotives (yard)	Line (k) plus line (l)	tons
(n) Tot. weight electric and internal combustion locomotives, road plus yard	A.R.Sch.417, p.405, line 9, plus line 10, col.(z)	tons
(o) Ratio of wt., yd. switching locos. to total locos.	Line (m) divided by line (n)	ratio
(p) Total depreciation - other locomotives	A.R.Sch.320, line 133, col.(b)	$
(q) Yd. portion of total loco. depreciation	Line (o) x line (p)	$
(r) Frt. port. of loco. depr., - yard	Line (g) x line (q) *	$
(s) Tot. loco. depr., frt., road and yard.	A.R.Sch.320, line 133, col.(e)	$
(t) Depr., other locos., road portion	Line (s) minus line (r)	$

Part III. Total depreciation, steam and other locomotives, separated between road and yard

Item	Source	Amount
(u) Road portion	Line (j) plus line (t)	$
(v) Yard portion	Line (h) plus line (r)	$

Part IV. Treatment where carrier has no regularly assigned locomotives in yard service

Item	Source	Amount
(w) Ratio of yard switching loco. miles to total loco miles in freight service	A.R.Sch.531, col.(b), item 25 divided by item 26	ratio
(x) Locomotive depreciation, steam and other locomotives, freight service ..	A.R.Sch.320, col.(e), lines 132 and 133	$
(y) Yd. port. of loco. depr. steam and other, freight	Line (w) x line (x)	$
(z) Rd. port. of loco. depr. steam and other, freight	Line (x) minus line (y)	$

Part V. Freight-train car depreciation

Assign 45% to the mileage portion, col.(8), and 55% to time portion, col.(9).

* It is assumed that the distribution of the yard locomotive-miles between freight and passenger is the same for steam locomotives as other locomotives. Separate mileage for (1) steam locomotives and (2) other locomotives, in freight versus passenger service, is not available.

3/ For the purpose of territorial aggregations, assign 100% to column (9). (Note: Where supplemental studies are to be made by individual carriers, assign as follows: If a debit balance, 100% to column (9); if a credit balance, apportion _____ % of such amount between columns (8) and (9) on basis of lines 3, 8, and 10, columns (8) and (9). Show remainder in column (4) for purpose of reconciliation. Such remainder must be deducted from the allowences for return on carrier's valuation when such valuation includes all freight car equipment owned. See Schedule . This procedure to be followed only upon special instructions).

4/ Ratio from Schedule E, sheet 2, line 28, column (14).

5/ Where the separation of locomotive expense, running, by territories is made on the basis of lines 23 and 24, the expenses equal column (17) multiplied by columns (18), (20), or (22), as applicable. Where the separation is provided by the carriers, see Schedule A, sheet 1, lines 13 to 35. Where the separation of locomotive expense, yard, by territories is made on the basis of line 19, the expenses equal column (17) multiplied by columns (18), (20), or (22), as applicable.

6/ Thousands.

7/ Column (3), line 8, divided by line 5.

8/ Adjust totals for passenger portion of nonrevenue freight by multiplying by ratio shown in footnote 4. The aggregate of the adjusted territorial totals should equal the amount shown in line 18, column (6) (for yard locomotives) and column (5) for road locomotives.

9/ Leave blank.

10/ Insert system and territorial (if any) expenses direct from Schedule A, sheet 3, line 31. Leave columns (16), (18), (20), and (22) blank.

11/ Insert system and territorial (if any) expenses direct from Schedule A, sheet 3, line 32. Leave columns (16), (18), (20), and (22) blank.

12/ Insert system and territorial (if any) expenses direct from Schedule A, sheet 3, line 29. Leave columns (16), (18), (20), and (22) blank.

13/ Where a carrier shows no expenses for yard locomotives, separate the expenses for road locomotives between train switching and running on the basis of the locomotive-miles in each service. Compute as follows:

Item	Source	Amount
(a) Train switching portion of mileage	Column 16, line 20 ÷ (column 16, line 20 + line 23)	Ratio
(b) Train switching expenses	Column 5, line 18 x line (a)	
(c) Road - running portion of expenses	Column 5, line 18 minus line (b)

6075

Footnotes for Schedule A, sheet 3

1/ Where the separation of respondent's freight-train car expenses is made on a system basis use only one sheet of this schedule, filling out lines 1 to 33 with columns (16) to (24) being left blank. Where the separation of respondent's freight-train car expenses is required on a territorial basis use a separate sheet for each territory. The total car-miles and car-days for all territories shall be aggregated and the expenses distributed on lines 24 to 33, columns (12) to (24), using for this purpose the first of the territorial pages, leaving such portion of the remaining territorial pages blank.

2/ Show the approximate car-days per car for each class of switching for which the number of cars are shown in column (3). Such estimates should reflect system averages, the data to be estimated on the basis of car records, per diem reclaims, demurrage records and available switching studies. Unless otherwise instructed, assume the following:

Class of switching	Switching service	Loading and unloading
(a) Carrier term. switch., indus. and team tracks		
(b) Carrier term. switching, freight-house tracks		
(c) Interchange switching		
(d) Other (designate)________		
(e) Other (designate)		

3/ From Annual Report, Schedule 531, column (d), sum of items 40, 41, and 48.

4/ Compute car days - running service as follows:

Item	Amount
(a) Train hrs. incl. train-switch. hours at way stations (A.R. Sch. 531, item 64, col.(b))	
(b) Avg. cars per train (A.R.Sch.531, (items 40 and 41, col.(b)))÷ (items 15, col.(b))	
(c) Freight train cars, hrs. - running (line (a) x line (b))	
(d) Freight train car days - running (line (c) ÷ 24 hours)	
(e) Caboose car days (train hours, line (a) ÷ 24)	
(f) Total car days, incl. caboose (line (d) plus line (e))	

For purposes of territorial breakdown, distribute between territories on the basis of the total car-miles, loaded and empty, including cabooses, shown on Schedule A, sheet 1, line 8, columns (4) to (7).

5/ Compute total loads from A.R. Sch. 541, Class 850, sum of columns (d) and (f) plus twice column (b). If information available, exclude respondent's cars upon which origin or destination switching is performed by connecting line. In such case show on lines 6 and 7 the cars for which origin or destination switching is performed for a connecting line. For purposes of compiling territorial aggregates, this adjustment may be ignored.

6/ The number of empties equals the number of loads times the ratio of the total empties spotted and switched out to the total loads spotted and switched out as developed from available test studies. (Show ratios used: Line 3 ______ ; line 5 ______ ; line 7 ______ ; line 13 _____ ; line 15 ______).

7/ If not readily available, compute as follows:

Item	Source	Amount
(a) Total tons of l.c.l. traffic handled	A.R.Sch.541, Class 710, sum of cols. (e) + (g) + twice col. (c)	tons
(b) Average load, tons per loaded car	From Senate Resolution 146, 76th Congress, First Session, Vol.1, Statement 6, col.(14)	tons
(c) Number of loaded cars	Line (a) divided by line (b)	cars
(d) Number of loaded cars originated or terminated, re transfers ..	Tons transferred (from Sch.D, sh.1, 6/ line (g), col.(3)) ÷ avg. load, line (b)	cars
(e) Total cars	Line (c) plus line (d)	cars

Note: If information available, exclude respondent's cars upon which origin or destination switching performed by connecting line. In such case show on lines 6 and 7 the cars for which origin or destination switching is performed by connecting line. For purposes of compiling territorial aggregates this adjustment may be ignored.

8/ Compute as follows:

Item	Source	Amount
(a) Number of cars, carload traffic	A.R.Sch.541, Class 850, sum of cols. (d) + (f) + twice col. (h)	c.ls.
Number of cars, l.c.l. traffic:		
(b) Number tons rec. from and deliv. to conn.	A.R.Sch.541, Class 710, cols. (e) + (g) + twice col. (i)	tons
(c) Percentage of tons (interline traffic) in thru cars not worked at interchg.	Senate Resolution 146, State. 6, cols. (3) ÷ (2)	ratio
(d) Number of tons (interline) in thru cars not worked at interchange points	Line (b) x line (c)	tons
(e) Average tons for thru car, interline	Senate Resolution 146, State. 6, col. (13)	tons
(f) Number of cars not worked at interchange	Line (d) divided by line (e)	cars
(g) Total cars, c.l. and l.c.l. ...	Line (a) plus line (f)	cars

9/ The number of empties equals the number of loads multiplied by the system ratio of empty car-miles to loaded car-miles. A.R. Sch. 531, col. (d), item 41 divided by item 40 ______ ratio.

10/ Insert, if available, from data furnished by respondent. Give single count for each car handled covering switching at both origin and destination industries. Increase estimates of car-days and car-miles accordingly.

11/ Insert, if available, from data furnished by respondent.

12/ To be computed from an analysis of the number of intertrain and intratrain switching movements received by the average car for the average length haul. For purposes herein, compute the number of handlings, loads, by dividing the loaded car-miles in A.R. Sch. 531, col. (d), item 40 by 150. (This treatment assumes that there is one handling for every 150 car-miles).

13/ The factor of 2.0 is used to give weight to the conclusion that a car handled one mile in switching service is subject to 2.0 times as much wear as a car handled one mile in running service. Weighting based on studies made by Engineering Section of Bureau of Valuation.

14/ Car-miles, running, from line 1, column (5). Car-miles, switching, from line 21, column (5).

15/ Show percentage relationship that the car-miles bear to the total system equated car-miles in line 26, column (13). Compute the corresponding relationship for the car-days to the system total car-days shown on line 30, column (13).

16/ Insert the mileage portion of freight-train car expenses in line 26, column (15) and the time portion in line 30, column (15) from Sch. A, sheet 2, line 18, columns (8) and (9), respectively. Distribute the mileage portion of the system freight-train car expenses shown on line 26, column (15) on the basis of the percentage distribution of the car-miles in columns (14), (17), (20), and (23). Similarly, distribute the time portion of the freight-train car expenses shown on line 30, column (15) on the basis of the percentage distribution of the car-days.

17/ Insert in lines 27, 28, and 29 the car-days from line 23, columns (6), (8), and (10), respectively.

18/ Insert, if available, from data furnished by respondent. Give single count for each car handled covering switching at point of receipt and point of delivery. Increase estimates of car-days and car-miles accordingly.

19/ The entries in columns (4), (7), and (9), line 18, are the same as in line 2, columns (4), (7), and (9), respectively. The entries in columns (4), (7), and (9), line 19, will be the same as the entries in line 3, columns (4), (7), and (9), respectively. Compute count of cars as follows:

Item	Source	Amount
(a) Tons of nonrevenue freight carried .	A.R.Sch. 531, item 80	
(b) Average net load of company material	Sch.E. sheet 2, line 5, col.(3) ÷ col.(5)	
(c) Total number of loaded cars handled, nonrevenue freight	Line (a) ÷ line (b)	
(d) Count of cars, nonrevenue, loads	Line (c) x 2	
(e) Count of cars, nonrevenue, empties .	Line (c) x 2	

Where the carrier's expenses and statistics are broken down by territories, distribute the system entries in Schedule A, sheet 3, column (3), lines 18 and 19, on the basis of the entries in column (3), lines 2 and 3.

25		Total for reconciliation purposes (line 17 plus line 23)	7/	-						25

1/ Separate between road and yard on basis of accounts 382 and 394. Separate road portion between running and train switching on the basis of account 394. Compute as follows the apportionment factor to be applied to amount shown above in column (3):

Line No.	Acct. No.	Item	Total	Running	Switching Train	Switching Yard
(1)	382	(A.R. Sch. 320, p.308, 1, 173, col. (e))		xxx	xxx	
(2)	394	(Sch. C, sheet 2, line 9) *				xxx
(3)		Total				
(4)		Percentage distribution of line (3) ...	%	%	%	%

* Line (2), account 394 - Take total from Annual Report, Schedule 320, line 185, col. (e). Compute train switching portion by obtaining proportion of account 394 to accounts 394-97, Schedule C, sheet 2, line 9, and multiplying this percentage by the train switching amount, line 9, Schedule C, sheet 2, column (6). Obtain running portion by deducting train switching portion from total

2/ See locomotive-miles, Schedule A, sheet 2, column (16), as follows: Running - line 23, train switching - line 20, yard switching - line 19. For territorial locomotive mileage see columns (18), (20) and (22).

3/ Separate between road and yard on the basis of accounts 383 and 395. Separate road portion between running and train switching on the basis of account 395. Compute ratio to be applied to amount in column (3) as follows: (If no charges to these accounts, assign entire amount to column (9)).

Line No.	Acct. No.	Item	Total	Running	Switching Train	Switching Yard
(1)	383	(A.R. Sch. 320, p.308, 1.174, col.(e))		xxx	xxx	
(2)	395	(Sch. C, sheet 2, line 9)*..........				xxx
(3)		Total				
(4)		Percentage distribution of line (3) ..	%	%	%	

* Line (2), account 395 - Take total from Annual Report, Schedule 320, line 186, column (e). Compute train switching portion by obtaining proportion of account 395 to accounts 394-97, Schedule C, sheet 2, line 9, and multiplying by the train switching amount, line 9, Schedule C, sheet 2, column (6). Obtain running portion by deducting train switching portion from total.

4/ Separate between road and yard on basis of accounts 383, 384 and 395, 396. Separate road portion between running and train switching on basis of accounts 395 and 396 from Schedule C, sheet 2, lines 10 and 11, respectively. Compute ratio to be applied to amount in column (3) as follows: (If no charges to these accounts, assign entire amount to column (9)).

Line No.	Acct. No.	* Item *	Total	Running	Switching Train	Switching Yard
(1)	383	(A.R. Sch.320, p.308, 1. 174, col. (e))		xxx	xxx	
(2)	384	(A.R. Sch.320, p.310, 1. 177, col. (e))		xxx	xxx	
(3)	395	(Sch. C, sheet 2, line 10)				xxx
(4)	396	(Sch. C, sheet 2, line 11)				xxx
(5)		Total				
(6)		Percentage distribution of line (5)	%	%	%	%

* Amounts under accounts 383 and 384 to be secured directly from Annual Report, Schedule 320, lines 174 and 177, column (e), respectively. Account 395 to be apportioned between running and train switching as per footnote 3. Account 396 to be apportioned between running and train switching by obtaining the proportion of account 396 to accounts 394-97, Schedule C, sheet 2, line 9, and multiplying this percentage by the amount in line 9, Schedule C, sheet 2, column (6). Running portion is obtained by deducting train switching portion from total.

5/ From Schedule A, sheet 2, line 17, column (10).

6/ Ratio from Schedule E, sheet 2, line 28, column (14).

7/ For carrier operations within one territory this total should agree with A.R. Schedule 320, page 307, line 114, column (e) plus maintenance of work equipment from Schedule A, sheet 2, line 17, column (10). If expenses separated by territories, total should equal that shown for the respective territories on Schedule B, sheet 1, line 28.

8/ Charges to accounts 245-46, gas producing plants, included with accounts 235-36.

20	374, 407	Weighing, inspection, etc.; tel. & tel.		-	xxx	xxx	xxx	xxx		20
21		Total, lines 19 and 20								21
22		Percentage distribution of line 21	100%	-	%	%	%	%	%	22
23	371, 410-411, 414, 420	Superintendence, stationery, insurance, injuries, etc.		Line 22						23
24		Total, line 19 + line 23								24
25		Total, less passenger proportion of non-[illegible] freight (line 24 x ____ratio) 7/		-					xxx	25
26	418	Loss and damage—Freight		Direct	xxx	xxx	xxx	xxx		26
27		Total for reconciliation (lines 21, 23, 26) 8/		-						27

1/ If no breakdown provided, charge to platform labor all station employees' compensation included in A.R., Sch. 561, pp. 522-23, division Nos. 88, 89, 90, 91, 92, and 94. Charge remainder of account 373 to "Other employees."

2/ Separate between running and train switching on the basis of the percent of the locomotive-miles in each service as follows: (From A.R., schedule 531, p. 508, column (b))

Item No.	Item	Locomotive-miles	Percent
21-23	Running - principal, helper and light locomotives ..		%
24	Train switching		%
	Total		%
25	Yard switching		xxx
26	Total (Reconciliation)		xxx

3/ Compute train-switching portion col. (6), on basis of average fuel, power, and water cost per yard switching locomotive-mile multiplied by the train switching miles as follows:

Line No.	Item (1)	Source (2)	Amount (3)
(1)	Sys. exp., yd., fuel, power, water.	A.R. Sch. 320, Accts. 382, 383, 384, 385 col. (c), or Terr.-data, Sch. C, sheet 1.	
(2)	Cost/yd. sw. loco.-mile	Line (1) + item 25, footnote 2/	
(3)	Train sw. portion	Line (2) x item 24, footnote 2/	

Note: Col. (3) minus train switching portion equals running portion.

4/ Separate between running and train switching on the basis of the percent that the ordinary and light train-miles on the one hand and the train switching miles on the other hand bear to the total. Compute percentages as follows: (From A.R. schedule 531, p. 508, column (b)).

Item No.	Item	Miles	Percent
11-12	Running, ordinary and light train-miles		%
24	Train switching		%
	Total		%

5/ Separation to be provided by carrier.

6/ On the territorial basis the net charges should approach zero. The net debits and credits assignable to train switching in such event are negligible for the purpose of this territorial study.

7/ See Schedule E, sheet 2, line 25, column (14).

8/ When system data is provided in this schedule, the total should agree with A.R. Schedule 320, line 215, column (c). Where a territorial breakdown of a carrier's expenses is made, the total shown on line 24, column 3, plus the amount shown on line 20, column (3), should equal the total shown in Schedule C, sheet 1, line 50, columns (5), (6), (7) or (8), respectively, depending upon the territory for which the expenses have been brought forward.

Computation of Territorial Unit Costs in Station Service

Station Expenses Separated between Carload and Less Carload

Computation of Unit Station Costs 3/

Line No.	Item (9)	Source (10)	Carload (clerical) (11)	L.C.L. (clerical) (12)	L.C.L. (platform) (13)	Line No.
	Clerical					
11	Consignments, carload and l.c.l.	4/, 5/			xxx	11
12	Cost per consignment, carload and l.c.l., respectively	Carload: Line 10a, col. (6) divided by line 11, col. (11) L.C.L.: Line 10a, col. (7) divided by line 11, col. (12)			xxx	12
	Platform					
13	L.C.L. tons handled at origin and at destination	5/	xxx	xxx		13
14	L.C.L. tons receiving a platform transfer	6/	xxx	xxx		14
15	Total l.c.l. tons originated, terminated and transferred	Line 13 plus line 14	xxx	xxx		15
16	Platform cost per ton	Line 10a, col. (8) divided by line 15	xxx	xxx		16
17	Aggregate platform cost for tons originated and terminated	Line 13 x line 16	xxx	xxx		17
18	Aggregate platform cost for tons transferred (assignable as line-haul cost)	Line 14 x line 16	xxx	xxx		18

1/ Compute apportionment factors as follows: (Assign weight of 5.0 to carload consignments and the weight of 1.0 to l.c.l. consignments in column (3) of the following)

Line	Item (1)	Number of consignments (2)	Weighting (3)	Weighted consignments (cols. 2 x 3) (4)	Percentage distribution (5)
(a)	C.L. consignments (see line 11, col. (11))				%
(b)	L.C.L. consignments (see line 11, col. (12))				%
(c)	Total, lines (a) plus (b)				%

2/ Ratio from Schedule E, sheet 2, line 28, column (14).

3/ The unit cost developed herein must be multiplied by 2 to obtain the total cost for both origin and destination.

4/ Compute carload consignments by giving a separate count to each carload originated, to each carload terminated, and to each carload billed in switching service, the billing of which has not been previously included in the above. For system figures see A.R. Schedule 541, class 850, sum of columns (d) and (f) plus twice column (b). Add count of cars billed in switching service if furnished by carrier ____________ carloads. For territorial data, see statement to be furnished by carriers.

5/ Compute l.c.l. consignments and tons as follows:
- (a) L.C.L. tons originated and terminated (see A.R. Schedule 541, class 710, column (e), plus column (g) plus twice column (c), or territorial data furnished by carrier) ______________ tons.
- (b) Estimated average weight of l.c.l. shipments (see item 7 of statement I supplied by carriers). Convert to tons to two decimal places ______________ tons.
- (c) Total number of l.c.l. consignments (lines (a) divided by (b)) ______________

6/ L.C.L. tons receiving a platform transfer to be developed from forwarder report (Senate Resolution 146, 76th Congress, first session, Vol. I, statement 6), as follows:

Line	Item (1)	Source (2)	Amount (3)
(a)	Tons originated—Test period	Forwarder report, statement 6, col. (1)	
(b)	Tons received—Test period	Forwarder report, statement 6, col. (2)	
(c)	Total—Test period	(a) plus (b)	
(d)	Tons actually transferred—Test period	Forwarder report, statement 6, col. (5)	
(e)	Ratio of tons actually transferred to originated and received—Test period	(d) divided by (c)	
(f)	Total tons originated and received—Annual period	A.R. Sch. 541, class 710, col. (k)*	
(g)	Total tons transferred—Annual period	(e) x (f)	

* For the purpose of line (f) (territorial application), see statement entitled "System Statistics for Carload and L.C.L. Traffic for 1939, Separated between Territories", furnished by the carrier in answer to a questionnaire dated November 19, 1940. For territorial data take one-half of the sum of items 3 and 4, columns (4)-(7), as applicable. (Note: The sum of items 3 and 4, column (3), representing the system aggregates, when divided by 2 should equal the system tons handled, as reported in A.R. Schedule 541, class 710, column (k)).

21	Total (lines 17, 19 and 20) 3/		xxx	xxx		21

1/ Compute as follows:

(a) Total M. of W. expenses from Sch. B, sheet 2, col. (3), line 23 ** .... $__________
(b) Subtract M. of work equipment, Sch. B, sheet 2, col. (3), line 22 .... $__________
(c) Subtract overhead assigned to tel. & tel., etc., Sch. E, sheet 1, col. (4), line 3 $__________
(d) Total, excluding duplications and overhead (Subtract (b) plus (c) from (a)) .... $__________
(e) Total, less passenger portion of nonrevenue freight ((d) x ________ ratio*) ... $__________

* Ratio from Schedule E, sheet 2, line 28, column (14).

** Where a territorial breakdown of a carrier is provided on Schedule B, change line (a) to read as follows:
Total maintenance of way expenses from Schedule B, sheet 2, line 23, column (3) plus Schedule B, sheet 1, line 24, column (9).

2/ Where the carrier's costs are separated on a territorial basis, line 8, column (2) should read as follows:
Schedule C, sheet 1, line 48, column (9) minus total loss and damage claim payments furnished by carrier, Statement 1, item 6 (carload plus l.c.l.).

3/ The reconciliation of the distributed expenses, lines 1-15, with the total expenses from the Annual Report plus the statement of loss and damage claim payments furnished by carriers, columns (17)-(20), is made as follows:

(a) See column (3) sum of lines 1, 4 and 7 .... $__________
(b) Line (a) + ______ ratio from Sch. E, sh. 2, line 28, col. (14) $__________
(c) Line 10, col. (3), plus line 15, column (4) .... $__________
(d) Sum of lines (b) + (c). This amount should equal line 21, column (5) .... $__________

36	Total passenger income or deficit (after operating expenses & return at ______%)	Line 33 plus line 35, signs considered	(+)or(-)				36
37	Ratio of passenger operating income or deficit (after operating expenses and return at ______%) to carload operating expenses (excluding l.c.l.)	Line 36 divided by line 24					37

1/ If territorial separation is made, data must be obtained from carriers.

2/ Senate Resolution 146, 76th Congress, First Session, Volume I, Statement 6, total pedler and other l.c.l. cars.

3/ Ratio to be determined by rate of return (i.e., ratio for 5-3/4% equals .0575).

4/ Maintenance of equipment, maintenance of way and transportation expenses, Sch. E, sheet 1, column (3), the sum of lines 1 plus 4 plus 7 divided by the ratio in Sch. E, sheet 1, footnote 1, line (e), totalling $________ times ________ ratio (ratio equals 1.00 minus ratio from Sch. E, sheet 2, line 28, column (14)).

5/ Compute as follows:

	Item	Amount
(a)	Sch. E, sh. 1, line 15, col. (5)	$
(b)	Subtract exps. miscl. opers., Sch. E, sh. 1, line 10, col. (3)	
(c)	Subtract overhead assignable to miscl. opers. (line (b) above x ratio from Sch. E, sh. 1, line 16, col. (5))	
(d)	Subtract l.c.l. exps., station, line-haul & switching (from Sch. E, sh. 3, line 21, col. (3))	
(e)	Carload costs (freight serv. costs minus costs for miscl. opers. & l.c.l.) (line (a) minus lines (b), (c) and (d))	

(See reverse side for continuation of footnotes)

Footnotes for Schedule E, sheet 3 - Continued

5/ Continued

Supplement to Footnote 5 of Schedule E, Sheet 3, to Be Used for the Purpose of Computing Carload Operating Expenses, Rents, and Taxes Where Territorial Separations Are Made
(See line (g) below)

Line	Item (1)	Source (2)	Total all territories (3)	Territory	Territory	Territory	Territory	Line
(a)	Total freight expenses, c.l. and l.c.l., excluding car hire and overhead apportioned to such car hire	Schedule H, sheet 1, line 44, columns (4), (5), (6) or (7), as appropriate	$	$	$	$	$	(a)
(b)	Percentage distribution of car-miles, cars rented on mileage basis	Schedule A, sheet 1, line 9, columns (4), (5), (6), and (7), respectively, + column (3)						(b)
(c)	Distribution of hire of freight cars rented on a mileage basis .	Schedule A, sheet 2, line 11, column (3) ($________) times ratio from line (b) above	$	$	$	$	$	(c)
(d)	Increase of the car hire for overhead and taxes	Line (c) times ______ ratio from schedule E, sheet 1, line 16, column (5)	$	$	$	$	$	(d)
(e)	Total freight service costs, c.l. and l.c.l.	Sum of lines (a), (c), and (d)	$	$	$	$	$	(e)
(f)	L.C.L. expense, station, line haul, and switching	Schedule E, sheet 3, line 21, columns (4), (5) or (6)	$	$	$	$	$	(f)
(g)	Carload costs (freight service costs minus cost for miscellaneous operations plus l.c.l.) (Carry forward to line 24)	Line (e) minus line (f)	$	$	$	$	$	(g)

6/ Insert the same figure as shown in line 27, column (3).

7/ Line 24 x ratio (percent) shown in line 27. If a deficit exists, indicate with a minus sign.

8/ Insert the same figure as shown in line 34, column (3).

9/ Line 24 x ratio (percent) shown in line 34. If a deficit exists, indicate with a minus sign.

Basis I for Treatment of Return on Valuation

Seperation of the Total Rate-making Valuation between L.C.L. Freight Traffic, Carload Freight Traffic and Passenger Traffic,
and the Computation of the Ratio of the Cost of Providing the Specified Returns to L.C.L. and Carload Operating Expenses, Rents and Taxes

______________________ Territory

(See reverse side for footnotes)

Footnotes for Schedule F, sheet 1

1/ Docket 26712, Exhibit 1263, Cost of reproduction new less depreciation plus present value of land and rights brought down to December 31, 1939 on the basis of the changes shown in A.R. Sch.211E plus an allowance for working capital based on the ratio of the working capital to total value of property on January 1, 1937. The tentative valuation, if used, is to be replaced by the recommended rate-making valuation, furnished by the Bureau of Valuation, when such becomes available.

2/ Compute ratio as follows:

Item	Amount
(a) A.R.Sch. 320, col.(e), line 247 minus lines 160, 228, and 245	
(b) Carload and l.c.l. portion of frt. exps. (line (a) x ratio, Sch. E, sheet 2, line 28, col.(14)),(excl. passenger port. nonrev. exps.).	
(c) L.C.L. and carload overhead exps. (A.R.Sch.320, col.(e), sum of lines 160 and 245) (Assign 100% to freight for purposes herein) ..	
(d) Total carload & l.c.l. port. of frt. exps., excl. passenger portion of nonrevenue expenses (line (b) plus line (c))	
(e) Ratio of carload and l.c.l. oper. exps. to total expenses (line (d) divided by A.R. Sch. 320, col.(b), line 247)	(ratio)

3/ Compute ratio as follows: L.C.L. costs divided by total freight service costs, i.e., Sch. E, sheet 3, col. (3), line 21, divided by sum of lines 21 plus 24. _______ ratio.

4/ Compute ratio as follows:

Item	Amount
(a) A.R. Sch. 320, col. (h), line 247	
(b) Passenger port. of nonrevenue frt. oper. exps. (A.R.Sch. 320, col.(e), line 247 minus lines 160, 228, and 245, the remainder to be multiplied by (1.0 minus ratio, Sch.E, sheet 2, line 28, col.(14))	
(c) Total passenger exps., incl. passenger portion of nonrevenue freight (line (a) plus line (b))	
(d) Passenger portion of valuation (line (c) divided by A.R. Sch. 320, col. (b), line 247)	(ratio)

5/ Do not compute if there is a net railway operating deficit.

6/ The carload net railway operating income indicates that income which the carload traffic (freight) necessarily had to earn during 1939 if the carrier was to yield the return indicated on lines 25 and 26, after allowances for the passenger, less-carload, or other deficits (or income).

1/ I. Compute from Schedule E, sheet 3, the less-carload income (or deficit) before payments to others for pick-up and delivery service, as follows:

- (a) Where Schedule E, sheet 3, line 26, column (3), shows a deficit, and that amount is greater than that shown on line 22, obtain the less-carload deficit by subtracting the amount shown on line 22 from that shown on line 26.
- (b) Where the amount on line 26 reflects an income, obtain less-carload income by adding the amount shown on line 22 to that shown on line 26.
- (c) Where Schedule E, sheet 3, line 26, column (3), shows a deficit and that amount is less than that shown on line 22, obtain the less-carload income by subtracting the amount shown on line 26 from that shown on line 22.

II. Compute the carload traffic portion of the net railway operating income as follows:

- (a) Where the total freight railway operations show an income (A.R. Schedule 300I, line 25, column (g) __________) and the less-carload operations show a deficit, (I-(a) above), obtain by adding the less-carload deficit to the income shown in Schedule 300I. Insert result in column (3) and indicate (+).
- (b) Where the total freight railway operations show an income (A.R. Schedule 300I, line 25, column (g) __________) and the less-carload operations show an income (I-(b) or (c) above), obtain by subtracting the less-carload income from the income shown in Schedule 300I. Insert result in column (3) and indicate (+).
- (c) Where the total freight railway operations show a deficit (A.R. Schedule 300I, line 25, column (g) __________) and the less-carload operations show a deficit (I-(a) above), obtain by subtracting the less-carload deficit from the deficit shown in Schedule 300I. Insert result in column (3) and indicate (+) or (-) as applicable.
- (d) Where the total freight railway operations show a deficit (A.R. Schedule 300I, line 25, column (g) __________) and the less-carload operations show an income (I-(b) or (c) above), obtain by adding the less-carload income to the deficit shown in Schedule 300I. Insert result in column (3) and indicate (-).

Separation of the Value of the Road and Equipment by Territories and by Services, Freight and Passenger

(See reverse side for footnotes)

____________ Railway

Schedule F
Sheet 2 - Contd.

Footnotes for Schedule F, sheet 2

1/ Furnished by carriers in reply to letter of March 12, 1941.

2/ Distribute the special services shown in Schedule B, sheet 1, line 24, column (9), to territories on the basis of Sch. B, sheet 1, line 24, columns (5), (6), (7) or (8) as applicable. Insert territorial costs thus computed in Schedule F, sheet 2, line 1, columns (3) and (7) and Line 15, columns (12) and (16), as applicable.

3/ Schedule B, sheet 1, line 24, columns (5), (6), (7) or (8) as applicable.

4/ Compute by subtracting the sum of the special service and miscellaneous expenses and the freight expenses from the total expenses. For example, in Territory 1, subtract the sum of columns (3) and (4) from column (2).

5/ Compute transportation expenses for each territory as follows:

LINE	Item	Source	Terr. 1	Terr. 2	Terr. 3	Terr. 4	Total
(a)	Total transp. exps. excl. L. & D. ..	Sch. C. sh. 1, line 50, cols. (5,6,7, 8 resp.)					
(b)	Percentage distrib. of line (a)						
(c)	Distribution of L. & D., frt., by territories	Distribute amount from Sch. C, sh. 1, line 50, col. (9) on basis of line (b)					
(d)	Tot. transp. exps., frt., by terrs.	Line (a) + line (c)					

6/ Adjust for passenger portion of nonrevenue freight expenses as follows using Territories I and II as an example. Multiply line 3, columns (4) and (8), respectively, by _______ ratio. (Ratio equals 1.00 minus _______ ratio from Schedule E, sheet 2, line 28, column (12)). Insert the product as a credit in line 4, columns (4) and (8), respectively. Insert the product as a debit in line 4, columns (5) and (9), respectively. The effect of this computation is to reduce the freight expenses by the amount of the adjustment for "the passenger portion of the nonrevenue freight expenses," and to add this amount to the passenger expenses.

7/ Apportion the sum of the amounts shown in A. R. Schedule 320 column (e) line 160 and line 245, on the basis of the amounts shown in line 3, columns (4) and (8) and line 17, columns (13) and (17).

8/ Apportion the sum of the amounts shown in Annual Report, Schedule 320, column (h), line 160 and line 245, on the basis of the amounts shown in line 3, columns (5) and (9) and line 17, columns (14) and (18).

9/ Distribute total miscellaneous expenses from Annual Report, Schedule 320, line 228, column (b), to territories on the basis of the amounts shown in line (8) columns (2) and (6) and line 22, columns (11) and (15).

10/ Compute the percentage relationship by territories, i.e., for Territory I, columns (3), (4) and (5) divided by column (2).

11/ Insert in columns (2), (6), (11) and (15) the value of road as furnished by the Bureau of Valuation. Distribute each territorial road value on the basis of the territorial percentages shown in lines 11 and 25, respectively.

12/ From Schedule F, sheet 3, line 41.

13/ Freight portion of value by territories to be carried forward to Schedule F, sheet 1, line 2, columns (4), (5) or (6) as applicable. Passenger portion of value by territories to be carried forward to Schedule F, sheet 1, line 5, columns (4), (5), or (6) as applicable.

Segregation of the Value of Equipment by Territories and between Freight and Passenger for Each Territory for Those Railroads Whose Expenses Are Separated by Territories

______________________ Railway

38	Station expenses - Carload, clerical	Sch. D, sh. 1, line 10A, col. (6)						38
39	Station expenses - L.C.L., clerical	Sch. D, sh. 1, line 10A, col. (7)						39
	Group IX - L.C.L. station expenses, platform handling at origin & destination, treated on a per ton handled basis 13/							
40	Station expenses, platform	Sch. D, sh. 1, line 17, col. (13)						40
	Group X - L.C.L. station expenses, platform handling account transfer, treated on net ton-mile basis							
41	Station expenses, platform cost for tons transferred (assignable as line-haul cost)	Sch. D, sh. 1, line 18, col.(13)						41
42	Net ton-miles l.c.l. traffic	Sch. E, sh. 3, line 8						42
43	Unit cost per l.c.l. net ton-mile	Line 41 ÷ line 42						43
44	Total frt. oper. exps., rents and taxes (excl. passenger portion of nonrevenue frt. exps., L. & D. claim payments and miscl. opers.) 14/	Lines 2, 6, 8, 16, 26, 32, 34, 36, 38, 39, 40 and 41	$	$	$	$	$	44

(For footnotes see Schedule H, sheet 2)

Footnotes for Schedule H, sheet 1

1/ Compute ratio of revenue car-miles to total car-miles, other than mileage as follows: Schedule E, sheet 2, column (14), line 20 ÷ line 18 __________ (ratio).

2/ Ratio from Schedule E, sheet 1, line 16, column (5). NOTE: Convert the percentage figure to ratio before bringing forward. For example, if the figure shown on Schedule E equals 15%, the ratio equals 0.15. This figure added to 1.0 equals 1.15. __________ (ratio).

3/ Compute cost per active car-day, revenue and nonrevenue traffic, as follows:

Item	Source	Amount
(a) Time portion of freight train car expenses, other than mileage cars	For system expense, see Schedule A, sheet 2, line 18, column (9); for territorial expense see Schedule A, sheet 3, line 30, columns (18), (21) or (24) as applicable	$
(b) Total increased for overhead and taxes	Line (a) x (1.0 + ratio) from 2/	$
Computation of total active car days, revenue and nonrevenue, other than mileage cars		
(c) Car days in running service, revenue and nonrevenue, including mileage cars	Sch. A, sheet 3, line 1, col. (11)	
(d) Ratio of car-miles, other than mileage cars, revenue and nonrevenue, to total car-miles .	Sch. E, sheet 2, col. (14), lines 18 ÷ 16	
(e) Car days, running service, revenue and nonrevenue, other than mileage cars	Line (c) x line (d)	
Computation of active car days in terminals, other than mileage cars		
(f) Car days in terminals, revenue only, including mileage cars but excluding l.c.l. cars ...	Sch. A, sheet 3, col. (11), lines 2 and 3, 6, 7, 12-15	
(g) Car days in terminals, other than mileage cars, carload traffic only	Line (f) x ratio from 11/ line (f)	
(h) Car days, freighthouse cars only	Sch. A, sheet 3, col. (11), lines 4 & 5	
(i) Car days, interchange switching and inter- and intratrain switching	Sch. A, sheet 3, col. (11), lines 8, 9, 16, and 17	
(j) Car days, interchange switching, inter- & intratrain switching, other than mileage cars	Line (i) x line (d)	
(k) Car days, nonrevenue, in terminals	Sch.A, sheet 3, col.(11), lines 18 & 19	
Total active car days, other than mileage cars		
(l) Total car days, revenue and nonrevenue, other than mileage cars	Lines (e), (g), (h), (j), and (k)	
Computation of cost per active car day, other than mileage cars		
(m) Cost per car day, other than mileage cars, including overhead and taxes	Line (b) ÷ line (l)	
(n) Cost per car day, other than mileage cars, excluding overhead and taxes	Line (a) ÷ line (l)	
Computation of revenue car-day costs, other than mileage cars, running service		
(o) Ratio of nonrevenue car-miles to total car-miles, other than mileage cars	Sch. E, sheet 2, col. (14), line 19 ÷ line 18	
(p) Nonrevenue portion of car days in running service	Line (e) x line (o)	
(q) Revenue car days in running service, other than mileage cars	Line (e) minus line (p)	
(r) Aggregate cost for revenue car days, other than mileage cars, running service, excluding overhead and taxes	Line (q) x line (n)	

3/ - Continued

Item	Source	Amount
Computation of nonrevenue car days, running, switching, plus loading and unloading		
(s) Car days in inter- and intratrain switching, revenue and nonrevenue, including mileage cars	Sch.A, sheet 3, col.(11), lines 16 and 17	
(t) Car days, inter- and intratrain switching, revenue and nonrevenue, other than mileage cars	Line (s) x line (d)	
(u) Nonrevenue car days, inter- and intratrain switching, other than mileage cars	Line (t) x line (o)	
(v) Total nonrevenue car days, loading, unloading, running and switching (excl. intchg.)	Lines (k), (p), and (u)	
Computation of active revenue car-day cost in running service plus interchange, intertrain and intratrain switching		
(w) Revenue car days in interchange switching and inter- and intratrain switching, other than mileage cars	Line (j) minus line (u)	
(x) Aggregate cost for revenue car days in interchange, inter- and intratrain switching, other than mileage cars, excluding overhead and taxes .	Line (w) x line (n)	
(y) Total revenue car-day cost, running service, plus interchange, inter- and intratrain switching, other than mileage cars, excluding overhead and taxes	Line (r) + line (x)	
Computation of the revenue portion of the mileage portion of the freight train car expenses, other than mileage cars		
(z) Running port. of frt. train car mileage exp., other than mileage cars	Sch. A, sheet 3, line 24, cols. (15), (18), etc.	
(aa) Rev. car-mile port. of frt. train car mileage exps., other than mileage cars	Line (z) x _____ ratio, from Sch. H, sheet 2 1/	
Total freight train car expenses, running, mileage plus time portion, other than mileage cars (insert in Sch. H, sheet 1, line 1		
(bb) Total frt. train car exps., rev. port., mileage plus time, run. service, other than mileage cars, excl. overhead and taxes	Line (y) + line (aa)	
Computation of the nonrevenue portion of freight train car expenses, including the nonrevenue portion of the car-day expenses, running, switching, loading, and unloading, and the nonrevenue portion of the mileage expenses, running service only (insert total in Sch. H, sheet 1, line 8)		
(cc) Nonrev. port. of frt. train car exps., mileage port., running service, other than mileage cars, excl. overhead and taxes	Line (z) minus line (aa)	
(dd) Total nonrev. frt. train car day exps., running, switching, loading and unloading, other than mileage cars, excl. overhead and taxes ..	Line (v) x line (n)	

(See reverse side for remaining footnotes)

(Footnotes for Schedule H, sheet 1 - continued)

3/ - Continued

Item	Source	Amount
(ee) Total nonrevenue freight train car expense, mileage plus time portion, excluding overhead and taxes	Line (cc) + line (dd)	
(ff) Total nonrevenue freight train car expenses, mileage plus time portion, including overhead and taxes	Line (ee) x (1.0 + _______ ratio) from 2/	
Reconciliation of freight train car expenses with total expenses in Sch. A, sheet 2		
(gg) Total freight train car expenses, running, mileage plus time portion, other than mileage cars incr. for overhead and taxes	Sch. H, sheet 1, line 1, col. (3) x (1.0 + ratio 2/)	
(hh) Freight train car expenses, switching, mileage portion, incr. for overhead & taxes .	Sch. H, sheet 1, line 22, col. (3) x (1.0 + ratio 2/)	
(ii) Total nonrevenue freight train car expenses, mileage plus time portions	Sch. H, sheet 1, line 6, col. (3)	
(jj) Freight train car-day expenses, switching at origin and destination industries, team tracks and freighthouses ...	Sch. H, sheet 1, col. (3), lines 32, 34, and 36	
(kk) Total freight train car expenses incr. for overhead and taxes	Sum of lines (gg) to (jj), inclusive	
(ll) Reconciliation - line (kk) should agree with total freight train car expenses, mileage plus time portion incr. for overhead & taxes .	Schedule A, sheet 2, line 18, (columns (8) plus (9)) x (1.0 plus _______ ratio 2/). For territorial expenses, see Schedule A, sheet 3, line 33, (columns (18), (21) or (24) as applicable) x 1.0 plus _______ ratio 2/).	
Reconciliation of active car days		
(mm) Total active car days for reconciliation with Sch. A, sheet 3, line 23, col. (11)	Sum of lines c + f + h + i + k	

4/ Where territorial distribution is made, distribute on the basis of special study in each case based upon the location of the floating equipment. For this purpose see Ex Parte 122 file, and distribution of operating expenses made by carrier on Schedule C, sheet 1, lines 38-39.

5/ Where territorial separation is made, bring forward the territorial totals, line 25, cols. (6) and (12), respectively.

6/ Freight-train car repairs, other than mileage cars, chargeable to the movement of nonrevenue traffic must be distributed over the traffic moving both in railroad-owned equipment and in cars rented on a mileage basis. For this reason the freight-train car expenses incurred in the handling of company material are distributed over all revenue traffic on the basis of car-miles.

7/ If cars rented on a mileage basis are used for the hauling of company materials, subtract the nonrevenue car-miles thus produced (see Schedule E, sheet 2, footnote 5) from the car-miles shown in Schedule E, sheet 2, line 17, column (14). The remainder should then be added to line 20 brought forward.

8/ Compute car-mile costs for cars rented on a mileage basis by adding to the cost per revenue car-mile, shown on line 11 (loaded + empty movement) the appropriate rental charge. (For example, 1.5 cents per car-mile, loaded and empty, for tank cars and gondolas and hoppers, 2.0 cents for refrigerator cars, etc. (AAR Mileage Tariff, Series No. 7)). Such rental charge must be increased for overhead and taxes by multiplying the rental per mile (i.e., 1.5 cents; 2.0 cents, etc.) by (1.0 + _______ ratio, from footnote 2). NOTE: The ratio of overhead expenses and taxes to operating expenses is derived by dividing the former by the operating expenses, including mileage rental payments.

9/ If carrier provides a separation of road locomotive repairs by territories on Sch. A, sheet 1, lines 21 to 36, bring forward territorial figures from Sch. A, sheet 2, line 22, cols. (19), (21), and (23), respectively. If carrier provides no such territorial breakdown and the separation was statistically made on the basis of the locomotive miles and locomotive ton-miles operating in each territory, bring forward the sum of lines 23 and 24, Sch. A, sheet 2, cols. (19), (21), and (23), respectively.

10/ See Schedule H, sheet 3, cols. (7) and (13) for the unit cost per car. Where territorial separation is made bring forward the territorial data.

11/ In computing the aggregate freight-train car expenses handled in other than mileage cars, data must be adjusted for (1) Overheads and taxes, (2) Distribution of freight-train car expenses incurred in the hauling of nonrevenue freight, and (3) Separation of the total car-days in terminal between that for mileage cars and that for other than mileage cars. Separation made by assigning to mileage cars all carload traffic reported in the freight commodity statistics customarily handled in refrigerator cars and tank cars. (In 1938 only 5.6% of the tank cars were railroad owned. The comparable figure for refrigerators was 15.1%. All Class I carriers. From Stat. of Railways in U.S., 1939, pages 21 and 23). Balance assigned to "Other than mileage" cars. The necessary ratio is developed on lines (a) to (f) below. This ratio is then applied to the total car-days in terminals for carload traffic to obtain the car days in terminal chargeable to "Other than mileage" cars. This step is taken on line (h) below. The car-days in terminal for "Other than mileage" cars, carload traffic, is then multiplied by the car-day cost per active car-day to obtain the aggregate freight-train car expense, industry and team track, "Other than mileage" cars, for carload traffic. The product is to be inserted in Schedule H, sheet 1, line 32, column (3).

Item	Source	Amount
(a) Carloads assigned to refrigerator cars	A.R. Sch. 541, cols. (d) plus (f) plus twice col. (b), classes 110-143, 210-222, 231-251, 630	
(b) Carloads assigned to tank cars	A.R. Sch. 541, cols. (d) plus (f) plus twice col. (b), classes 280, 360, 370, 441, 450, 451, 460-462, 472, 660, 661	
(c) Total carloads assigned to refrigerator and tank cars (Total assumed to approximate the mileage cars originated & terminated	Sum of (a) plus (b)	
(d) Total carload traffic mileage plus "All other" cars	A.R. Sch. 541, Class 650, cols. (d) plus (f) plus twice (b)	
(e) Carloads, originated and terminated, "Other than mileage" cars	Line (d) minus line (c)	
(f) Ratio of carloads, "Other than mileage" cars, to the total carloads, carload traffic	Line (e) ÷ line (d)	
(g) Car-days incl. mileage cars, sw. plus detention for ldg.& unldg.	Sch. A, sheet 3, col. (11), sum of lines 2, 3, 6, 7, and 12-15	
(h) Car-days, "Other than mileage" cars, sw. plus detention for loading and unloading	Line (f) x line (g)	
(i) Aggregate frt. trn. car exp.other than mileage cars, carld.traf. .	Line (h) x cost per active car-day from footnote 3, line (m)	

12/ Compute freight-train car expenses for L.C.L. traffic at origin and destination points, also at transfer points, as follows: (Assumes use of other than mileage cars)

Item	Source	Amount
(a) Car-days, including switching plus detention for loading and unloading, origin and destination points only	Sch. A, sheet 3, 7/, line (c) x _______ days per loaded car, (Sch. A, sheet 3, line 4, cols. (7) + (9) + (_______ ratio x line 5, col. (7). See Sch. A, sheet 3, 6/, line 5, for ratio.	
(b) Aggregate expenses, L.C.L. traffic at origin and destination points	Line (a) x cost per car-day from 3/, line (m)	
(c) Car-days, L.C.L., account transfer	Sch. A, sheet 3, 7/, line (c) x days per loaded car (See line (a))	
(d) Aggregate expenses, L.C.L., account transfer	Line (c) x cost per car-day from 3/, line (m)	

13/ For unit costs, see Schedule D, lines 12 or 16.

14/

Item	Source	Amount
Reconciliation of total expenses, Schedule H, with total expenses, Schedule E, sheet 1, line 15, column (5)		
(a) Aggregate expenses	Sch. H, sheet 1, line 44, column (3)	
Items included in Schedule E but not brought forward in Schedule H		
(b) Hire of mileage cars	Sch. A, sheet 2, line 11, column (3)	
(c) Maintenance of grain elevators and storage warehouses	Sch. B, sheet 2, column (3), lines 9 + 10	
(d) Miscellaneous operations	Sch. E, sheet 1, line 10, column (3)	
(e) _______________		
(f) Total	Lines (b) to (d), inclusive	
(g) Total including overhead and taxes	Line (f) x (1.0 + ratio, 2/	
(h) Grand total	Lines (a) + (g)	

Separation of Switching Expenses by Classes of Switching 5/

(Expenses exclude all freight-train car expenses except switching portion of mileage expenses)

1/ Compute the cost scale by inserting in the line designated "0" the terminal expenses per hundred pounds for each net load shown in the Carload Assembly Schedule, column (7). For any given distance increase such terminal expense per hundred pounds by the line-haul expenses obtained by multiplying the length of haul in miles by the line-haul expenses per hundred pounds per mile for each net load shown in the Carload Assembly Schedule, column (13). The carload cost study provides for several levels of cost. Cost Level II, covering operating expenses, rents and taxes, is that shown in this table. To compute the remaining levels of cost, III to V(b), inclusive, increase the costs shown herein by the percentages developed from the Territorial Summary as follows:

Cost Level III(a): See Territorial Summary Schedule, sheet 7, column (10).
Cost Level III(b): See Territorial Summary Schedule, sheet 7, column (4).
Cost Level IV: See Territorial Summary Schedule, sheet 5, columns (4) plus (8).
Cost Level V(a): See Territorial Summary Schedule, sheet 5, columns (4) plus (8), plus sheet 8, column (4).
Cost Level V(b): See Territorial Summary Schedule, sheet 5, columns (4) plus (8) plus sheet 7, column (8).

See Introductory Page 1 for the items included in each level of cost. Include the loss and damage for any given commodity group by adding to the costs shown above the loss and damage payments per hundred pounds for such group. Payments to be added after the cost scales have been increased by the percentages referred to above.

1/ Compute the less-carload cost scale by inserting in the line designated "0" the terminal expenses per hundred pounds for each net load shown in the Less-carload Assembly Schedule, column (9). For any given distance increase such terminal expense per hundred pounds by the line-haul expenses obtained by multiplying the length of haul in miles by the line-haul expenses per hundred pounds per mile for each net load shown in the Less-carload Assembly Schedule, column (19). The less-carload cost study provides for three levels of cost. Cost Level II, covering operating expenses, rents and taxes, is that shown in this table. To compute the remaining levels of cost, III(a) and III(b), increase the costs shown herein by the percentages developed from the Territorial Summary as follows:

Cost Level III(a): See Territorial Summary Schedule, sheet 6, column (13).
Cost Level III(b): See Territorial Summary Schedule, sheet 5, column (13).

See Introductory Page 1 for the items included in each level of cost. Include the loss and damage by adding to the costs shown above the loss and damage payments per hundred pounds on less-carload traffic. Payments to be added after the cost scales have been increased by the percentages referred to above.

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF NEW YORK

Civil No. 2311

THE STATES OF NEW YORK, DELAWARE, INDIANA, MARYLAND, MICHIGAN, NEW JERSEY, OHIO, WISCONSIN, AND THE COMMONWEALTH OF PENNSYLVANIA,

Plaintiffs,

vs.

THE UNITED STATES OF AMERICA,

Defendant.

Civil No. 2337

THE ATCHISON, TOPEKA AND SANTA FE RAILWAY COMPANY, ET AL.,

Plaintiffs,

vs.

THE UNITED STATES OF AMERICA,

Defendant.

JURISDICTIONAL STATEMENT

Pursuant to Rule 12 of the revised rules of the Supreme Court of the United States, the plaintiff appellants respectfully present the following statement disclosing the basis upon which it is contended that the Supreme Court of the United States has jurisdiction upon appeal to review the final judgment or decree in the above entitled cause sought to be reviewed.

A. Jurisdiction

The statutory provisions believed to sustain the jurisdiction of the Supreme Court to review by direct appeal the final decree entered in these causes by the Court below are contained in U. S. C., Title 28, Section 47a, which provides:

> "A final judgment or decree of the District Court in the cases specified in Section 44 of this title may be reviewed by the Supreme Court of the United States if appeal to the Supreme Court be taken by an aggrieved party within sixty days after the entry of such final judgment or decree, and such appeals may be taken in like manner as appeals are taken under existing law in equity cases." (36 Stat. 1150; 38 Stat. 220.)

These causes being actions "to enjoin, set aside, annul, or suspend in whole or in part" orders of The Interstate Commerce Commission are cases "specified in Section 44 of this title."

The following decisions sustain the jurisdiction of the Supreme Court to review the final decree and order on direct appeal in these causes:

Ann Arbor R. Co. v. *United States*, 281 U. S. 658;
Texas & Pacific Ry. Co. v. *United States*, 289 U. S. 627;
United States v. *Chicago, M. St. P. & P. R. Co.*, 294 U. S. 499;
Atchison, T. & S. F. Ry. Co. v. *United States*, 284 U. S. 248.

B. The Statutes of the United States which are involved

The validity of a statute of a state, or of a treaty of the United States, is not involved.

The statutory provisions involved are Section 1(4) and (5)(a), Section 3(1) and Section 15(1) of the Interstate Commerce Act (U. S. C., Title 49) and Section 5(b) of the

Transportation Act, 1940 (U. S. C., Title 49, footnote following Section 3(5) in 1945 supplement, 54 Stat. 902), commonly referred to as the Ramspeck Resolution.

C. Date of the judgment or decree sought to be reviewed and the date upon which the application for appeal was presented.

The decree sought to be reviewed was entered on May 27, 1946. The petition for appeal was presented and allowed on June 25, 1946, together with the assignment of errors.

D. Nature of the Case and of the Rulings of the District Court.

These are two suits, brought in the United States District Court for the Northern District of New York, under the provisions of U. S. Code, Title 28, Sections 41 and 43 to 48, inclusive, seeking a review of and a final decree setting aside, annulling and enjoining orders of the Interstate Commerce Commission in proceedings before it entitled *Class Rate Investigation, 1939,* Docket No. 28300, and *Consolidated Freight Classification,* Docket No. 28310. These proceedings were conducted upon a single record as one investigation, commonly referred to as the Class Rate Investigation. The Commission's original report is printed in 202 I. C. C. 447. A supplemental report made by the Commission has not yet been printed. The orders sought to be enjoined were a so-called interim order, dated May 15, 1945, as amended with respect to its effective date by several subsequent orders, and a supplemental order dated October 30, 1945, which for brevity are jointly referred to herein as the Commission's orders.

In the course of the development of railroad systems and railroad transportation, the country, for the purposes of railroad freight rates, has come to be divided into sections referred to as rate or classification "territories." The boundaries of these territories conform generally but with some exceptions with the termini of the railroad systems so that each territory embraces railroads which are chiefly competitive each with the other and are affected by common, physical, business, and other conditions. Official or Official Classification Territory, so-called, is roughly that portion of the United States north of the Ohio and Potomac Rivers and east of the western shore of Lake Michigan, extending diagonally to the western bank of the Mississippi River opposite Illinois. It embraces the plaintiff states and New England. The Southern or Southern Classification Territory is that section of the country, roughly, south of the Ohio and Potomac Rivers and east of the Mississippi River. Western or Western Classification Territory includes the part of the country west of the Mississippi River and also part of Wisconsin.

Corresponding with the foregoing divisions of the country, the railroads publish and maintain in tariff schedules filed with the Commission three major classifications of freight, known respectively as the Official, Southern and Western Classifications. In these classifications many thousands of articles of freight are listed and are assigned to classes—for example, first class, second class, etc.—for the purpose of determining the freight rates to be charged for transportation by railroad. Then by other tariff schedules filed with the Commission the several railroads publish and maintain freight rates to be charged for the transportation of freight of each of the several classes between various points. These rates are known as the class rates. The classifications or classes to which many of the articles are assigned are not uniform in the several classifications. For example, an article may be classified third class in the Official, fourth class in the Southern, and fifth class in the Western Classifications.

In addition to the classifications and class rates, the railroads in the several sections or rate territories have from time to time published and now maintain tariff schedules providing numerous exceptions to the classifications. They also have filed and published a large number of tariff schedules naming rates for the transportation of individual commodities between specified points, which rates are commonly referred to as "commodity rates." As a general rule these exceptions and commodity rates are lower than and supersede the class rates so that the classifications and class rates determine the charges for transportation only as to freight for which no exception or commodity rates are in effect.

Due to various factors, such as the characteristics and volumes of freight to be transported, the varying competitive conditions encountered and the influences and orders of different governmental authorities, the railroads in the several classification and class rate territories—Official, Southern and Western—have followed different theories and practices in establishing and maintaining their various rates. In Official Territory the transportation of a larger proportion of the total freight moving by railroad is made subject to class rates, as distinguished from exception and commodity rates, than is the case in Southern and Western territories. The class rates are charged principally for the transportation of manufactured articles. Many commodity rates, for the transportation of low-grade freight and raw materials, are higher mile for mile in Official Territory than the corresponding rates in Southern and Western territories. For the transportation of many articles for which the railroads in Official Territory charge class rates, the railroads in the South and West charge exception rates or commodity rates which are lower than the class rates in those territories and in some instances are as low as or lower than the class rates charged in Official Territory for the same distances.

The Commission's order with which this action is concerned related only to the class rates.

The present class rates for transportation in each territory and from one territory to another were prescribed by the Commission not long ago after extensive investigations. In these investigations, because of and on the basis of findings of great differences in the kinds and volumes of freight in the several territories, in the physical and competitive conditions encountered by the railroads, in the rate schemes of the railroads and in other factors, the Commission prescribed quite different class rate scales for the several territories, different in level and in rate of progression with distance. The class rates for transportation between points in Official Territory [illegible]e set at a level somewhat lower than the levels determined for the class rate in the South and West. *Eastern Class Rate Investigation* (1930), 164 I. C. C. 314; 171 I. C. C. 481; 177 I. C. C. 156; 203 I. C. C. 357; *Southern Class Rate Investigation* (1925), 100 I. C. C. 513; 109 I. C. C. 300; 113 I. C. C. 200; 128 I. C. C. 567; *Western Trunk Line Class Rates* (1930), 164 I. C. C. 1 and several supplemental reports of which the sixth (1934), 204 I. C. C. 595 contains the principal bases for the present rates; *Consolidated Southwestern Cases* (1927), 123 I. C. C. 203 and several supplemental reports of which the twenty-first (1934), 205 I. C. C. 601 contains the principal bases for the present rates; *Western-Southern Class Rates* (1938), 226 I. C. C. 497; 231 I. C. C. 315; 232 I. C. C. 81; 238 I. C. C. 681 and 246 I. C. C. 119 (1941).

Notwithstanding these facts, the Commission in its report here in issue has concluded that the class rates for transportation in each territory and from Southern and Western territories to Official Territory are unlawful under the

Interstate Commerce Act because they are not uniform and to the extent that each is higher or lower than the other. Based upon such a conclusion and as a temporary measure pending the working out of a completely revised basis of class rates the Commission has made the interim order involved in this action. By this order, for the purpose of bringing about, as nearly as may be, a uniform level of class rates, the Commission would require the railroads in Official Territory to increase by ten percent their class rates for transportation within that Territory and would require a ten percent reduction in the class rates for transportation in the South and West and from those territories to Official Territory.

Civil No. 2311 was brought by nine Northern States located in Official Classification Territory, the States suing in their own capacity as shippers and receivers of freight and also in their representative capacities on behalf of their communities, citizens and industries, who would be subjected by the Commission's order to the ten percent increase in the class rates for railroad transportation within Official Territory. Because of the large volume of freight on which class rates are charged in Official Territory, the Commission's findings and the evidence indicate that the increases in freight charges resulting from the Commission's order would amount to many millions of dollars annually.

Civil No. 2337 was brought by the Western railroads and attacked particularly so much of the Commission's order as would require a ten percent reduction in the class rates charged by those railroads.

The Governors of the New England States intervened in both actions. The Western railroads intervened as intervening plaintiffs in No. 2311 and the States of New York and Ohio intervened as intervening plaintiffs in No. 2337.

The Commission appears to have been led to its ultimate conclusion upon which its interim order was based by a belief that the so-called Ramspeck Resolution together with an amendment made to Section 3 of the Interstate Commerce Act by the Transportation Act of 1940 accomplished a change in the substantive requirements of the law and that the Commission was thereby under a mandate or at least authorized to bring about a uniform basis of class rates throughout the country, to find the existing class rates unlawful because not uniform and to order both increases and reductions to accomplish uniformity without findings on proof of the preliminary facts which have heretofore been held to be essential as the basis of ultimate findings that rates are in violation of Sections 1 and 3 of the Interstate Commerce Act.

Thus the Commission's order, in supposed exercise of its power to prescribe minimum reasonable rates, would require a ten percent increase in the class rates for transportation between points in Official Territory, notwithstanding that there is no finding and no evidence to support a finding that the existing class rates are not fully compensatory to the railroads for the transportation for which they are charged, or a finding that the maintenance of the present class rates threatens a rate war or is otherwise likely to jeopardize the financial ability of the railroads to provide adequate and efficient transportation service. The question is presented whether the Commission may require rates raised under such circumstances and in the face of evidence, reflected also in findings in its report, that the existing class rates are highly profitable to the railroads in Official Territory. It has never heretofore been held that the Commission may order an increase in freight rates under these circumstances.

One of the principal questions for determination in the action is whether under the law as it now is and in the light of the changes made by the Transportation Act of 1940, the Commission has the power and is under a duty to require shippers and receivers of freight in Official Territory to pay increased freight charges to the carriers by whom they ship in order that uniformity of class rates may be accomplished at a level which will not bankrupt the railroads in other sections of the country.

Again the action presents a question whether, in the guise of accomplishing a uniform level of class rates, the Commission may require an increase in the class rates for transportation in Official territory and may find that undue prejudice and preference in violation of Section 3(1) of the Interstate Commerce Act exists by reason of the differences in the levels of the published class rates, in the absence of findings and of evidence to support findings that the freight for the transportation of which class rates are charged in Official Territory is likewise subject to class rates for transportation within and from the other territories, in the absence of any finding or evidence to support a finding that the differences in the levels of the class rates have been the cause of any substantial injury to Southern and Western territories or to shippers or industries therein, and in the face of findings and evidence that whereas the class rates to be increased for transportation within Official Territory are charged upon a very large volume of freight transported within that Territory, only a negligible proportion of freight is charged class rates in the other territories because the railroads have there established exception or commodity rates lower than the class rates.

The case presents the very important and far-reaching question whether notwithstanding the wide variations in kinds and volumes of freight transported in the different territories, the different physical and other transportation conditions encountered by the carriers therein, the different schemes of rates evolved and maintained by the carriers in the different territories, in the face of the fact that for the most part the carriers serving one territory do not operate in another territory, and in the face of the Commission's own decisions in the past that these considerations required that the freight rates should be at different levels in the different sections of the country, the class rates are now unlawful because not on a uniform level throughout the entire country east of the Rocky Mountains.

Without here detailing all of the other matters involved, these actions further present the question whether the Court should not take judicial notice of the profound economic changes wrought by the war now confronting the nation in the postwar period, as it took judicial notice of the consequences of the depression of the '30s, *Atchison T. & S. F. Ry. Co.* v. *United States*, 284 U. S. 248, and whether in the light thereof it should not conclude, as it did in the case cited, that because the Commission's order is based upon evidence relating to conditions in 1939 and the early war years, this order which would take effect in the postwar period is now invalid because not based upon competent proof as to the conditions in which it is to operate.

The statutory district court denied a permanent injunction of the Commissioner's order. The court appears to have rested its decision primarily upon a holding that the amendment made to Section 3(1) of the Interstate Commerce Act by the Transportation Act, 1940 so changed the law that the Commission in the accomplishment of a uniform level of freight rates was justified in finding the existing rates previously prescribed by it unlawful without findings of preliminary facts heretofore considered essential to such an ultimate conclusion. However, the district court has certified reasonable doubt as to its decision in this regard.

E. The substantial character of the issues

The impact of the Commission's decision and order would fall principally upon the States, communities, industries and individuals embraced within Official Territory. The mere fact that a ten percent increase is proposed in the freight rates charged upon a substantial proportion of the total freight traffic transported throughout the northern quarter of the country should alone call for full judicial review, lest the citizens of that section be subjected to additional freight costs amounting to many millions of dollars annually as the result of an erroneous interpretation of the law or without adequate justification in the evidence for overturning a rate adjustment upon which the business of the country has developed.

But it is not only the magnitude of the territorial reach of the Commission's order or the amount of the additional transportation costs which it would impose upon shippers and receivers of freight in the appellant States which affords basis for the appeal to the Supreme Court. The fact that these results proceed from or are based upon an interpretation of an amendment to the Interstate Commerce Act not heretofore judicially construed and whose construction will affect railroad rate regulation in the future adds to the importance of the issues. In addition to this is the significant feature that the Commission's decision and order resting upon its interpretation represent a departure from or reversal of previously established tenets as to what must be proved and found to sustain an ultimate conclusion that freight rates violate the Interstate Commerce Act and what is necessary to justify the exercise by the Commission of its power to order freight rates increased. These considerations certainly afford strong reason for scrutiny by the highest court of the lower court's decision upholding the action of the Commission.

The Commission knew that it was departing from previously recognized paths in the interpretation and administration of the Interstate Commerce Act, as is indicated by its attempt to find justification of its action in the supposed change in the law accomplished by the amendment to Section 3 of the Act. That there was doubt as to the soundness of the decision of the majority of the Commission both as to the interpretation of the law and as to the sufficiency of the evidence to sustain the order is shown by the vigorous dissents of some of the members of the Commission. The decision of the District Court upholding the order of the Commission, which represents a departure both from previous rate-making practices and standards and from long accepted interpretation of the Interstate Commerce Act, which rests upon legislative enactment not heretofore construed by the Supreme Court but whose effect will be felt in all future rate litigation, and which would impose an added freight burden of many millions of dollars upon the communities, shippers and industries of a large section of the country, is certainly of such importance as to be worthy of review by the Supreme Court.

And if there were need for further confirmation that this is a case especially calling for review by the Supreme Court, it is found in the final decree signed by the three judges of the district court, where after having pondered the record, the authorities and the original arguments of the parties in the preparation of its decision and then having heard the parties in all-day argument upon motions to continue and to dissolve the interlocutory injunction, the court certified:

> "The decision of these consolidated cases necessarily involves the determination of novel questions of law of great importance to the shippers, the carriers and the public of this country. There are reasonable

> and serious doubts as to the determination of these novel and important questions."

Toward the conclusion of the argument upon the continuance of the interlocutory injunction, Circuit Judge Chase, the presiding judge of the three-judge court, said:

> "While we used our best endeavors to decide this case promptly I still am and always have had serious doubt as to whether we properly construed that Section 3 of 1940, whether we have given it the right scope, and if we have, I should have serious doubt as to whether the findings made by the Commission were adequate to support their conclusions as to prejudice and discrimination." (Minutes of Hearing, May 28, 1946, p. 73)

Shortly before that Judge Knox had said:

> "I think from our study of the law the order may not be sound * * *." (Minutes, p. 69)

With doubt thus expressed by the court below as to the crroectness of its decision and as to the validity of the Commission's order, and with members of the Commission having challenged the action of their associates in issuing the order, it is submitted that there can be no question but what the Supreme Court should hear this appeal.

F. Opinion, decree and order of the District Court

Appended to this Statement are: (1) Copy of the opinion of the District Court, dated May 9, 1946; (2) the interlocutory injunction dated December 20, 1945, restraining the enforcement of the Commission's order pending determination of the petitions for a permanent injunction; and (3) final decree and order of the District Court dated May 24, 1946, dismissing the petitions in the above entitled causes and continuing the interlocutory injunction in effect, pending the taking of an appeal and the determination thereof by the United States Supreme Court.

Prayer for Reversal

WHEREFORE appellants pray that their appeal may be heard and that the judgment, decree and order of the District Court may be reversed.

Respectfully submitted,

APPENDIX "A"

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF NEW YORK

Civil No. 2311

THE STATES OF NEW YORK, DELAWARE, INDIANA, MARYLAND, Michigan, New Jersey, Ohio, Wisconsin and The Commonwealth of Pennsylvania, *Plaintiffs,*

against

THE UNITED STATES OF AMERICA, *Defendant*

Civil No. 2337

THE ATCHISON, TOPEKA AND SANTA FE RAILWAY CO., et al., *Plaintiffs,*

against

THE UNITED STATES OF AMERICA, *Defendant*

Before Chase, Circuit Judge, Knox and Brennan, District Judges

Two suits brought pursuant to 28 U. S. C. A. Pars. 41 (28) and 43-48 inclusive and also under the general jurisdiction of the court in equity to enjoin, annul, set aside and suspend orders of the Interstate Commerce Commission, Petitions dismissed.

Parker McCollester, New York City; Frank J. Clark, New York City, Special Assistant Attorneys General, for the State of New York.

Herbert T. Ferguson, Madison, Wisconsin, Assistant Attorney General for the State of Wisconsin.

Kenneth L. Sater, Columbus, Ohio for the State of Ohio.

Robert Peacock, for the State of New Jersey, Deputy Attorney General.

Henry E. Foley, Boston, Mass., for New England Governors.

Vincent G. Hart, New York City in behalf of Department of Law of the State of New York.

H. C. Barron, Chicago, Ill., for Western Railroads.

Edward H. Miller, Special Assistant to the Attorney General, Washington, D. C., for The United States of America.

Daniel W. Knowlton, Chief Counsel to the U. S. Interstate Commerce Commission, Washington, D. C., for Interstate Commerce Commission.

George T. Simpson, St. Paul, Minn. for J. A. A. Burnquist, Attorney General, and the State of Minnesota.

J. V. Norman, Louisville, Kentucky, for the Southern States and Southern Governors' Conference.

Byron M. Gray, Topeka, Kansas, for States of North Dakota, South Dakota, Kansas, Nebraska, Oklahoma, Texas and Arkansas, and their respective State Commissions.

C. E. Logwood, Public Service Commission of South Carolina, Columbia, South Carolina, for Public Service Commission.

Robert F. Park, Montgomery, Alabama, for Alabama Public Service Commission.

Douglas F. Smith, Chicago, Ill., for Western Railroads.

Lewis Petteway, Tallahassee, Florida, for Florida Railroad Commission.

Karl J. Stipher, Deputy Attorney General of Indiana, Indianapolis, Indiana.

Hugh S. Jenkins, Columbus, Ohio, for State of Ohio.

J. C. Murray, Little Rock, Arkansas, for State of Arkansas, the Governor of Arkansas and the Arkansas Public Service Commission.

Neal E. Williams, Fargo, North Dakota, Solicitor for Nels G. Johnson, Attorney General of North Dakota, and Public Service Commission, State of North Dakota.

H. Emerson Kokjer, Deputy Attorney General of Nebraska, Lincoln, Nebraska, Solicitor for State of Nebraska and Nebraska State Railway Commission.

Duane T. Swanson, State Capitol Bldg., Lincoln, Nebraska, for State Railway Commission.

C. B. Bee, Oklahoma City 5, Oklahoma, for Governor Robert S. Kerr; State of Oklahoma, Corporation Commission, and Western and Southwestern States.

Walter R. McDonald, Georgia Public Service Commission, Atlanta, Georgia, for Southeastern Association of R. R. and Utilities Commissioners.

Jerry W. Carter, Tallahassee, Florida, for Florida Railroad Commission.

David O. Mathews, Special Assistant to the Attorney General of the United States, of Counsel for the United States.

D. Robert Thomas, Chicago, Ill., for Western Railroads.

James Noel, Assistant Attorney General, Austin, Texas, for State of Texas and Railroad Commission of Texas.

STATEMENT AND FINDINGS OF FACT BY THE COURT

These two suits put in issue the validity of the same orders of the Interstate Commerce Commission and were consolidated for hearing before a court of three judges constituted in accordance with provisions of the Urgent Deficiencies Act, 38 Stat. 29.

The first was brought against the United States by the States of New York, Delaware, Indiana, Maryland, Michigan, New Jersey, Ohio, Wisconsin and The Commonwealth of Pennsylvania to enjoin, set aside, annul and suspend orders of the Interstate Commerce Commission requiring an increase of ten per cent in what are called the class rates charged by the railroads for transporting freight in the so-called Official Territory and a decrease of ten per cent in the class rates charged by railroads for transporting freight in the so-called Southern Territory, Western Trunk Line Territory and Southwestern Territory and corresponding changes in the interterritorial rates. Parties in interest were permitted to intervene [1] and, after hearing, an injunction pendent lite was granted.

Minneapolis and Omaha Railway Company; The Colorado and Southern Railway Company; The Denver and Rio Grande Western Railroad Company; The Duluth, South Shore and Atlantic Railway Company; Elgin, Joliet & Eastern Railway Company; Fort Dodge, Des Moines & Southern Railway Company; Fort Worth and Denver City Railway Company; Great Northern Railway Company; Green Bay and Western Railroad Company; Gulf, Colorado and Santa Fe Railway Company; The Kansas City Southern Railway Company; Midland Valley Railroad Company; The Minneapolis & St. Louis Railway Company; Minneapolis, St. Paul & Sault Ste. Marie Railroad Company; Missouri and Arkansas Railway Company; Missouri-Kansas-Texas Railroad Company; Missouri-Kansas-Texas Railroad Company of Texas; Guy A. Thompson, Trustee, Missouri Pacific Railroad Company, Debtor; Northern Pacific Railway Company; Panhandle and Santa Fe Railway Company; St. Louis Southwestern Railway Company; Southern Pacific Company; Texas and New Orleans Railroad Company; Union Pacific Railroad Company; The Texas and Pacific Railway Company; The Wichita Valley Railway Company, Intervening Plaintiffs. The United States, Defendants. The Interstate Commerce Commission; The Southern States; Alabama, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, and Tennessee; and The Southern Governors' Conference, a voluntary organization of the Governors of the Southern States; The States of Arkansas, Kansas, Nebraska, North Dakota, Oklahoma, South Dakota, and Texas, and their respective State Commissions; The Arkansas Public Service Commission, The State Corporation Commission of Kansas, The Kansas Industrial Development Commission, The Nebraska State Railway Commission, The Public Service Commission of the State of North Dakota, The Corporation Commission of the State of Oklahoma, The Public Utilities Commission of the State of South Dakota, and The Railroad Commission of the State of Texas; The State of Minnesota; and The Southeastern Association of the Railroad and Utilities Commissioners, Intervening Defendants.

Thereafter the Atchison, Topeka and Santa Fe Railway Company and others which will be referred to as the Western Lines,[2] brought another petition against the United States in which the same relief was sought in respect to the same orders. Interested parties were allowed to intervene.[3]

These two suits were heard as a consolidated action, all questions relating to venue having been waived.

In order to understand the issues here presented, as well as the action of the Commission and the relevancy of the facts found by it, some preliminary statement of what was in 1939 apparently the prevailing situation in this country in respect to freight classifications and freight rates is necessary.

For the purpose of fixing freight rates the country was, and now is, divided into the four territories already mentioned and one other which is called Mountain-Pacific Territory, and which is not involved in these suits. It covers the States of Montana, New Mexico, the western portions of Colorado and Wyoming, and all the States west of them. The other territories, which are all involved in these suits, may be roughly described as follows: Western Trunk Line Territory includes the States east of Mountain-Pacific Territory, north of Oklahoma and Arkansas, and west of the Mississippi River and the greater part of Wisconsin and the northwestern portion of Michigan. Southwestern Territory includes the country south of Western Trunk Line Territory and west of the Mississippi River. Southern Territory consists of the country lying east of the Mississippi and south of the Ohio and Potomac rivers. Official Territory comprises the remainder of the country lying north of the Ohio and Potomac rivers and east of the western boundary of Lake Michigan and a line drawn diagonally therefrom to the western bank of the Mississippi River opposite Illinois. Official Territory has two subdivisions one of which includes all of New England and the other of which, known as Zone C, takes in the northern part of Michigan and a small part of Wisconsin. In the Southern Territory the greater part of Florida is a subdivision and in Western Trunk Line Territory there are Zones I, II, III, and IV. In each of these subdivisions rate differentials are applicable which vary the class rates from those in force elsewhere in the territories.

---

[2] The plaintiffs were the Western Railroads, supra footnote 1.

[3] The States of New York and Ohio; The New England Governors (listed above), Plaintiff Intervenors. The Interstate Commerce Commission; The Southern States, and The Southern Governors' Conference (listed above); The Western States and their respective Commissions; The Southeastern Association of Railroad and Utilities Commissioners, Defendant Intervenors.

There are different freight rates in all the territories and these are known as class rates, exceptions to class rates, column rates and commodity rates. Only the class rates are involved in these suits. They are rates based on published classifications which are lists of commodities by name grouped in designated classes. To compute a freight charge under class rates it is necessary to know the classification, the rate for that classification and then take into account factors like weight of the shipment and distance to be carried. The basic rate so fixed for Class I is applicable percentagewise to the other classes, the rates for them being higher or lower than for Class I as the case may be. Commodity rates are special rates which have been fixed for designated commodities transported between specified points regardless of the class rates; column rates are special rates for certain named commodities which are based upon a given percentage of the class rates; and exception rates are, as their name implies, variations from the class rates. There are also key rates which apply to certain so-called key points. These differing rates, of which all but the class rates will hereafter be called for convenience special rates, have come into being because of various considerations among which have been competition between the railroads themselves, between railroads and carriers by water and by motor truck, orders issued by the Interstate Commerce Commission, which will hereafter be called the Commission, composition and amount of traffic available for carriage, cost of operation and other like relevant factors. The result is more or less of a hodge podge at least so far as class rates are concerned and various efforts have been made to secure greater uniformity and simplicity in rate making ever since the Commission was created. Despite the efforts of the Commission and the cooperation of the railroads these efforts have heretofore been mainly fruitful only in respect to improving conditions in regard to intraterritorial rates.

Not only have the class rates varied among the territories but the classifications published for the several territories have been so different that like articles were, and are, often classified in one class in one territory and in a different class in the others or in one of them. All this has brought about a most complex system of class rate fixing which has, generally speaking, produced lower class rates for Official Territory than for the others though that appears not to hold true in respect to special rates. Another result has been that a greater proportion of all freight in Official Territory moves on class rates than in the others where exception, column and commodity rates have become more prevalent, though it has come about that in all the territories only a comparatively small percentage of the entire freight carried has been on class rates. What is so carried moves both in carload, and in less-than-carload, lots and the cost of its transportation varies accordingly throughout the territories and also varies somewhat because of dissimilar conditions affecting cost of operation.

Although the products of farm, mine and forest are by no means negligible within Official Territory, that portion of the country does in some respects stand apart from the remainder because it is there that the greatest concentration of industrial plants, population, and buying power is found. The larger and better markets which producers in general wish to reach are found there and the prevailing lack of uniformity in classifications and in class rates, in so far as they directly bear upon the cost of transportation by freight within Official Territory and interterritorially between it and the other territories, and indirectly through the special rates, was thought by many to be on the whole more favorable to Official Territory, and to shippers and receivers of freight therein, than to the other territories and their shippers and receivers of freight.

It was against this general background that the Commission determined to institute two investigations and on July 29, 1939, issued orders which, as later modified, resulted in prolonged hearings by Division 2 of the Commission upon due notice to all parties in interest, as to the lawfulness of the classifications and of the class rates in each of the territories now involved. These investigations known as Docket No. 28300 which dealt with the rates and Docket No. 28310 which dealt with the classifications were so related that they were conducted simultaneously. The cooperation of the state commissions was sought in accordance with Par. 13 of the Interstate Commerce Act (49 U. S. C. A. Par. 13), and a committee representing such conmisssions sat with the Division. The investigation became extremely comprehensive and a large amount of evidence was received which was reviewed by the full Commission. It filed a proposed report in No. 28310 providing for the creation of a uniform classification for all the territories including that part which is now subject to what is called the Illinois classification which has some interstate application in a border area between Official Territory and Western Territory but has no interterritorial effect, to be compiled by the Commission or by the railroads for the approval of the Commission provided the railroads were willing to undertake the task. The railroads indicated their willingness to do so and the classification is now being made. That will require an enormous amount of work and will take a considerable time, perhaps years. No issues respecting that classification which is dealt with in Part I of the Report are raised now.

Without serving a proposed report in No. 28300, the Commission filed a comprehensive report dealing with class rates to become effective when the classification is prepared and approved. This report contained numerous findings as to the characteristics of the existing rate structures, the importance of interterritorial traffic, the relative levels of class rates in each territory and the indirect results of the proposed revision. Evidence afforded by intricate and detailed cost studies made by employees of the Commission to show the relative cost of the carriage of freight in the several territories was also received and considered following revisions of the studies made in response to criticisms by interested parties. Findings were made as to interterritorial class rates, the relative levels of revenue from all freight in the Southern and Official Territories, the effect of applying the Official Territory level of all freight rates to all freight moved in Southern Territory, the relative costs and composition of all freight moved in Southern Territory, and the rates of return. The Commission also made findings as to the effect of the class rates on shippers in Southern Territory, the relative costs and composition of the traffic, the rates of return and their effect on the economic development of that territory. Findings on similar or kindred subjects were made respecting the other territories and the interterritorial freight movement among them. The costs of carload and less-than-carload service were considered and findings made as to each. Findings were made as to the effect of motor truck and water-borne freight competition, as to the effect of the special rates on movement of freight taking class rates, and of the discrepancies in the existing class rates on the attainment of uniformity in classification. There is an area geographically within Official Territory which is served by the so-called Pocahontas lines, which are predominantly coal carrying roads, that is for statistical purposes at times treated separately from the remainder of Official Territory because, though those railroads do carry freight at class rates, the bulk of their freight, being coal, is quite different in respect to the means and cost of carriage from the kinds of freight which characterize the carriage elsewhere in the territory. For like reasons Kentucky in the Southern territory was at times likewise treated separately from the remainder of Southern territory in the Report.

The Commission then found as follows:

> "1. That the intraterritorial class rates (except as they apply to rail-and-water coastal service or relate to short- or weak-line arbitraries) applicable within

official, Illinois, southern, southwestern, and western trunk-line territories, are, and for the future will be, unjust and unreasonable, in violation of section 1 (4) and (5) of the act.

“2. That the interterritorial class rates in issue in this proceeding applicable between official, Illinois, southern, southwestern, and western trunk-line territories are, and for the future will be, unjust and unreasonable, in violation of section 1 (4) and (5) (a) of the act.

3. That the relation between the interterritorial class rates applicable from southern, southwestern, and western trunk-line territories to official and Illinois territories, on the one hand, and the intraterritorial class rates applicable within official and Illinois territories, on the other hand, makes, gives, or causes, and for the futre will make, give, or cause undue and unreasonable preference and advantage to official and Illinois territories as a whole and the shippers and receivers of freight located therein, and subjects and for the future will subject, southwestern, and western trunk-line territories as a whole and the shippers and receivers of freight located therein to undue and unreasonable prejudice and disadvantage, in violation of section 3 (1) of the act.

“4 That a just and reasonable basis of class rates, not unjustly discriminatory or unduly preferential or prejudical, to be observed by the respondents with respect to the traffic described in findings 1, 2, and 3 immediately preceding, will be the following:

(a) The application as a maximum for class 1 (class 100) of the scale of rates shown in appendix 10.

(b) The rates herein prescribed are to applied to the distances over the shortest possible rail routes by which carload traffic can be interchanged between carriers without transfer of lading.

(c) That the scales of class rates for each class, other than class 1 (class 100), shall bear the percentage

> relations, to class 1 (class 100) rates found in part I hereof to be just, fair, and reasonable for the classes in the uniform classification. Appendix M to *Western Trunk Line Class Rates,* 164 I. C. C. 1282 contains a table which shows the percentages of class 100, below 100, herein found reasonable; and shows the rates which will result from applying these percentages to any given rate from 30 cents to $4. The rates shown in this table should be applied in establishing the rates for classes below 100. For classes above 100, fractions of a cent should be disposed of by dropping those less than one-half and by increasing these of one-half cent or more to the next whole cent.
>
> (d) Key-point class rates based on the scale herein found reasonable may be established subject to our approval between points where such rates were prescribed by us in the prior general class rate revisions.
>
> (e) That such class rates shall apply to the ratings of commodities taking class rates as the same shall be rated in the uniform classification found to be just, fair, and reasonable in part I hereof.
>
> (f) That such revised uniform class rates and classification ratings shall be made applicable simultaneously."

No order putting the class rates found to be just and reasonable for the future has been, or will be, made until the new classification becomes effective and no issue is now directly raised as to such rates with which the Commission dealt, but not unanimously in Part II of its Report.

What the Commission, also not unanimously did which is ~~now~~ attacked was to provide in Part III of its Report for an ad interim class rate revision which with certain designated minima class I rates provides in general for a 10 per cent increase in class rates in Official Territory and for a 10 percent decrease in such rates in the other territories involved herein with corresponding changes in interterritorial class rates as already mentioned. The Commission said in part:

> "In parts I and II of this report we have found the classification ratings and class rates involved in

this proceeding to be an unjust and unreasonable, and unduly and unreasonably preferential and advantageous, as well as unduly and unreasonably prejudicial and disadvantageous in certain respects for the reasons therein stated. It is our duty under Section 15 (1) of the act to determine and prescribe what will be the just and reasonable rates and charges, and what classification will be just, fair, and reasonable, to be hereafter followed.

"The record herein is extensive, but from the very nature of these proceedings the comprehensive basis of just and reasonable rates cannot at this time be established in connection with a uniform classification such as we have found to be required as just, fair and reasonable, until that classification is brought into being. The comprehensive rate revision and classification, unification and revision should be accomplished simultaneously, if possible. From our prior experience with extensive rate readjustments and classification proceedings, and from the record in this proceeding, we know that necessarily considerable time must elapse before the respondents can formulate and tender for our approval a classification which will conform to our findings with respect to justness, fairness, and reasonableness. The many complexities inherent in a task of such character and magnitude are inevitable. The shipping public and rate-making authorities of the States should be afforded opportunity for participation in the undertaking as far as their interests are concerned. And as shown by the record, and as within our common knowledge, there is at the present time a shortage of men who may be devoted to such task by the respondent carriers, public authorities, including this Commission, and by shippers and their organizations. This latter condition is a direct consequence of the withdrawal of such experts from their former employment for active participation in the war.

"We find, however, that in the circumstances it is possible and practicable to make certain readjustments in the existing basis of class rates, predicated upon the continued application of the existing classifications, which will be just and reasonable, which will have the effect of bringing to the minimum the preferences and prejudices which we have found to be unlawful, as completely as it is practicable now to eliminate such violations. This finding is based upon the peculiar circumstances of the present time, largely the result of the war, and because time will be needed to effectuate a classification revision and application of a scale or scales of class rates as our findings in part I and part II hereof contemplate. The adoption of the simple and direct method of rate revision which we are about to outline will conserve time, and will obviate many tariff publishing difficulties without complete revision of the classifications before us and the determination and prescription of new scales of rates based thereon.

"Our general conclusions and findings heretofore made have emphasized the importance and desirability of bringing the several intraterritorial freight-rate structures under consideration closer together in level and more upon the same pattern or scheme. We have also emphasized the importance and desirability of removing as many differences as possible between the interterritorial rates of the respondents and the intraterritorial rates which they maintain. The basis which we shall not outline is in harmony with that objective, and will approach, as a preliminary step, the uniformity of class rate structure which we have previously found will be just, fair, and reasonable.

"We find and determine that the basis hereinafter outlined will result in rates which, until a complete revision in harmony with our previous findings is possible, will be just and reasonable.

"We find and determine that on and after the effective date of the order to be entered herein, the existing and current interstate class rates applicable to freight traffic moving at the classification ratings within southern, southwestern and western trunk-line territories as those territories have heretofore been described in this report, and interterritorially between those territories, and also between those territories, and official territory, as hereinbefore described, will be unjust and unreasonable unless reduced 10 percent, subject to the class 1 scale shown at the end of this paragraph as minima for class 1 rates, and subject to the qualifications hereinafter indicated. This reduction is to be made by using the present current applicable class 1 rates as a base, and reducing them 10 percent, subject to observance of the rates in the distance scale set out hereinafter as minima. The rates on all the other classes in each class-rate system are to be correspondingly reduced by observing the same percentage relations to the class 1 rates thus reduced that such classes bear to the currently applied class 1 rates. No changes in existing exception rates or column rates are contemplated by this finding. No increase in any existing class rates is to be made under this finding within the southern, southwestern, and western trunk-line territories, and interterritorially between those territories, and also between those territories and official territory. In determining resulting rates, fractions of a cent should be disposed of by dropping those of less than one-half cent and by increasing those of one-half cent or more to the next whole cent. We do not contemplate that groupings in connection with the present class rates shall be changed as a result of this finding. In applying the scale of minimum rates, the distances between groups or blocks of stations upon which the present class rates are based are to be observed, rather than the actual distances to or from such station, when differing therefrom. (The table of rates included at this point in the report is here omitted).

"We find and determine that simultaneously as a part of the adjustment hereinbefore outlined, the existing applicable interstate class rates for freight traffic moving at classification ratings within official territory (including Illinois territory) should be increased 10 percent as maximum scales, superseding the intraterritorial official class-rate scale heretofore prescribed or authorized by us, subject to the qualifications hereinafter indicated, and that as so increased those scales will be just and reasonable as maximum. The increase of maximum class rates applicable within official territory is to be made by using the present current applicable class I rates as a base, and increasing them 10 percent. The rates on the other classes should be correspondingly increased by observing the same percentage relations to the maximum class I rates as thus increased that such classes bear to the currently applied class I rates. No changes in existing exception rates or column rates are contemplated by this finding. The same provision with respect to disposition of fractions of a cent, as to groupings, and as to the ascertainment of distance hereinbefore stated with respect to the reductions within and between other territories and between those territories and official territory, shall in like manner apply to the increases in the maximum class-rate charge without additional charge therefor. We also find and determine that such pick-up and delivery service has been extended in scope largely since our findings and orders in the various proceedings hereinbefore recited which prescribed or approved the class rates in issue in this proceeding. We find and determine from the evidence of record in this proceeding, that when such service is performed the applicable class rate with the existing minimum charge as stated does not yield the out-of-pocket costs incident to the transportation service which it purports to cover. We further find that to the extent the minimum charge per shipment is less than 75 cents, it is below a just and reasonable minimum rate and charge. Upon the record as it stands, and predicated upon the adjustments for the interim period hereinbefore found to be just and reasonable, we determine and find that the minimum charge per shipment, whether pick-up and delivery service is afforded or not, whenever such charge is below 75 cents, is below the minimum of a just and reasonable rate and charge and that 75 cents is and will be a just and reasonable minimum charge to be made.

"The foregoing findings and determinations are made as of the date when the order to be entered herein becomes effective. Inasmuch as these proceedings will necessarily be held open upon our docket and as our power to suspend, modify, or set aside our orders is recognized [illegible] act, we do not now prescribe, a specified period of time during which these findings as to the interim adjustment shall continue in force, but make them as continuing until our further order.

"In certain States the applicable intrastate class rates are held to a basis prescribed by us in orders entered in proceedings under section 13 (3) and (4) of the act. No especial consideration has been given to such intrastate rates in this proceeding. If any modification of our outstanding orders seems necessary, it should be sought by appropriate action as contemplated by our general rules of practice.

"Our outstanding orders will be modified to the extent necessary to enable the carriers which are bound thereby to publish and file schedules embodying such increases and decreases; and authority will be given by appropriate order under section 6 of the act for the publication of simple forms of supplements to existing schedules to effectuate such increases and decreases. If carriers need relief under the provisions of section 4 of the act, we will give prompt consideration to applications therefor."

And order was entered making this ad interim revision effective as of January 1, 1946, but it was suspended pendente lite by order of this Court.

We find that the facts found by the Commission are supported by substantial evidence and adopt them as our findings. Their inclusion herein by reference to the Commission's Report is to be understood.

The Western Lines were allowed at the final hearing in this court, over the objection of the defendant, to introduce some evidence on the question of the confiscatory character of the ad interim order as to them. This was received subject to a motion to strike on which decision was reserved at the close of the hearing. The motion to strike is now denied on the authority of Baltimore & Ohio R. R. *v.* United States, 298 U. S. 349 and we make the following findings on the evidence thus received.

A very large number of different commodities are carried at one time or another in less-than-carload lots by the so-called Western Lines within the rate territories here involved west of the Mississippi River. Some of this traffic, though what percentage was not definitely shown, moves on exception rates and some on commodity rates but a substantial amount of it is carried on class rates. The average loading per car of this traffic for the year 1939 was 4.3 tons and that is close to what it had been for some six years previously, though on the whole the year 1939 showed a little decline mainly due to competition by carriers by motor truck and to the greater combining of shipments into carload lots. Because of an order of the Office of Defense Transportation issued in 1942 the minimum per car loading of the less-than-carload traffic was set at 10 tons and that more than doubled the previous average loading per car. That order was still in effect at the time of the hearing. When it is rescinded the railroads intend to return to pre-order practices and may have to cut the average loading to move the freight more quickly though that will depend upon the impact of competition and the volume offered for such carriage. There are some items in what is known as Consolidated Freight Classification No. 16, and the supplements thereto, which are rated fourth class, column 55, to which no commodity or exception ratings are applicable in less-than-carload lots. That is also true in respect to some third class ratings, column 70. There is a substantial movement of such commodities in Southwestern Territory and there is no major railroad, other than the so-called Burlington Lines, which relies for its revenues exclusively on its operations within the Western Trunk Line and Southwestern Territories which has not been in some sort of a receivership or bankruptcy proceeding within the last five years. The raising of rates, other than class rates, for less-than-carload lots as suggested by the Commission in its report for consideration by the railroads has not been done since that has not been thought feasible in view of the probable loss of traffic it would cause.

There was evidence indicating that the carriage of the commodities above referred to which are not carried by the railroads within Western Trunk Line and Southwestern Territories other than on class rates in less-than-carload lots will not produce enough revenue to pay the cost of their carriage when the ad interim reduction in class rates becomes effective but we are unable to find that to be a fact proved. The statistical evidence to support that contention was based on the assumption that the average car loadings would be as low as 4.3 tons, which was a low point average, and apparently did not take into account that part of the Commission's order which requires a minimum charge of 75 cents per shipment less-than-carload instead of the 55 cent minimum charge heretofore. We have not sufficient confidence in that type of evidence to be satisfied that it proves that deficit carriage is required by the ad interim order, though we find from the evidence that costs of the carriage have for some time been increasing and will probably show additional increases.

Chase, Circuit Judge:

The Commission acted, in making the investigations and the resulting orders, pursuant to its conception of its duties as the agency created to administer the Interstate Commerce Act (49 U. S. C. A. Par. 1.), which will hereinafter be called the Act. Its action was taken particularly with reference to Par. 1 (4) which imposes upon every railroad which is a common carrier in interstate commerce the duty

> "to provide and furnish transportation upon reasonable request therefor, and to establish * * * just and reasonable rates, fares, charges and classifications applicable thereto; * * *."

And to Par. 1 (5) (a) which provides that:

> "All charges made for any service rendered or to be rendered in the transportation of passengers or property, * * * or in connection therewith, shall be just and reasonable, and every unjust and unreasonable charge for such service or any part thereof is prohibited and declared to be unlawful."

Also to Par. 3 (1), which, as amended by the Transportation Act of 1940 (49 U. S. C. A. (Supp.) Par. 3 (1), provides that it shall be unlawful:

"For any common carrier * * * to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever; * * *."

"That whenever after full hearing, upon a complaint made as provided in section 13 of this part, or after full hearing under an order for investigation and hearing made by the Commission on its own initiative, either in extension of any pending complaint or without any complaint whatever, the Commission shall be of opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers subject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly prefential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation or practice is or will be just, fair and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

The inquiries were commenced, the report filed, and the order made as provided in Pars. 13 (2), 14 (1) and 15 (1) of the Act.

In the first of the two suits which were brought the plaintiffs and the intervenors who support them attack the ad interim order on the grounds that it is an attempt to regulate industrial conditions by means of rate making; that it is the result of political agitation; that findings essential to support the order are lacking and that the evidence does not support the findings made, in that there is no proof of facts to support so-called ultimate findings above quoted to keep them from being merely arbitrary and capricious. These so-called preliminary findings which are lacking and of which proof is also lacking are said to be that there is no finding of a threatened rate war which would jeopardize the revenues of the railroads in Official Territory; or that the existing class rates are not fully compensatory to railroads in Official Territory for the transportation services for which they are charged; or that they are so low as to cast an undue burden upon other traffic. Also it is argued that the finding of undue prejudice and preference created as between territories by the present class rates is arbitrary because not based upon preliminary findings made on proof by means of substantial evidence to the effect that the class rates published are the rates at which the freight moves; because findings and proof of a competitive relationship between the party preferred and the party prejudiced are lacking; because findings and proof of substantial injury to the party found to be prejudiced and of substantial benefit to the party found to be preferred are lacking; because findings and proof that the same carrier or carriers are responsible for or control both the preferential and prejudicial rates are lacking; because findings and proof that the carriers charge existing class rates on the same kinds of freight moved into Official Territory which is carried at class rates within Official Territory are lacking; because findings and proof that similar freight is carried under similar conditions in each territory are lacking; and perhaps there are other grounds of similar nature. The suit brought by the Western Lines and supported by the intervenors aligned with them adds the ground that the ad interim reduction in the class rates in the West is confiscatory.

The petency of much of the argument in support of the grounds relied on by the plaintiffs depends upon the effect to be given the before mentioned amendment to Par. 3(1) of the Act by the Transportation Act of 1940 and to Par. 5 (b) of the latter. The change thus made in Par. 3(1) of the Act was the addition of the words ‘‘region’’, ‘‘district, territory’’ following ‘‘transit point’’ in the enumeration of the persons, places and traffic as to which preference and prejudice was expressly made unlawful and prohibited. In accordance with what has become a somewhat common practice, the Transportation Act of 1940 contains a declaration of policy which in part is ‘‘to encourage the establishment and maintenance of reasonable charges for transportation service without unjust discriminations, undue preferences or advantages or unfair or destructive competitive practices.’’ And in Par. 5(b) is found what is known as the Ramspeck Resolution where it is provided that:

‘‘The Interstate Commerce Commission is authorized and directed to institute an investigation into the rates on manufactured products, agricultural commodities, and raw materials, between points in one classification territory, and points in another such territory, and into like rates within any of such territories, maintained by common carriers by rail or water subject to part I of the Interstate Commerce Act, as amended, for the purpose of determining whether said rates are unjust and unreasonable or unlawful in any other respect in and of themselves or in their relation to each other, and to enter such orders as may be appropriate for the removal of any unlawfulness which may be found to exist: * * *."

The Commission undertook to carry out the mandate of this statute by means of the investigations it had already initiated as above set forth. It found, however, that, because of conditions largely attributable to the war, it was advisable to confine its investigation and orders to classifications and class rates established and maintained by common carriers by rail and accordingly did so.

But it is earnestly argued by the plaintiffs, especially by the Western Lines, that the Commission misinterpreted the above changes in the statute to amount to a mandate requiring it to bring about an equalization and uniformity of rates for like kinds and amounts of commodities mile for mile among the various rate territories of the country and to increase its powers so to do. It is recalled that the Commission had previously mistakenly construed the so-called Hoch-Smith Resolution to give it added powers to correct what it found to be unjust discriminations "as between the various localities and parts of the country." And it is pointed out that if such a mistaken interpretation has been made the order which is the result of it is erroneous and must be set aside. Ann Arbor R. R. *v.* United States, 281 U. S. 658; Atchison, T., & S. F. Ry. *v.* United States, 284 U. S. 248, 262. That the same mistake has been made is thought to be apparent because the words "parts of the country" in the above quotation from the Hock-Smith Resolution are as broad and comprehensive as "regions, districts, territories" added by the 1940 Amendment to Par. 3 (1). Yet even if this premise be true, it does not follow that the same mistake has now been made. It does not appear that the Commission has herein acted upon any assumption that the 1940 changes altered the basic principles governing its action. On the contrary, it appears that in determining the existence of discriminatory rates it has construed the changes in the statute to mean that where it is found that class rates are different in the different territories, and interterritorially, and those differences cannot be justified under recognized principles of rate making by proof of sufficient differences in costs of transportation, composition and amount of traffic, competition by common carriers other than railroads, and the like, those rates may be found unjustly preferential or prejudicial because unduly discriminatory and consequently unlawful as between regions, districts and territories.

We think this interpretation of Par. 3 (1) of the Act as amended is supported by the legislative history. The original Interstate Commerce Act was primarily aimed at the elimination of unjust discriminations of various kinds. Louisville & Nashville R. R. *v.* United States, 282 U. S. 740, 749-50. Yet it did not until the amendment of Par. 3 (1) in 1940 expressly prohibit unjust discriminations against any region, district or territory as such. "Territory" had become a word of art denoting the several rate territories which had grown up and, by adding region and district, parts of such territories were included to amplify the words "locality, port, port district, gateway, transit point" which had previously been the only designation of what might be called geographical units in the specific reference in the statute to a person, company, firm, corporation, association, * * *, or particular description of traffic" as to which unjust preference and prejudice and discrimination were made unlawful. These words had proved to be, in their effect upon geographical designation as such, of somewhat restricted application as was shown by Texas & Pacific Ry. *v.* United States, 289 U. S. 627.

This amendment to Par. 3(1) appeared in S. 2009. In the report made by the Senate Committee on Interstate Commerce[5] It was said as to Par. 3(1), "There has been no substantial change therein, except that the words 'region, district and territory' appearing in lines 20 and 23 on page 26 have been inserted." And the chairman of the committee said in part in explanation of the amendment, "The previous provision with regard to 'discrimination' simply referred to discrimination as to 'locality, port, port districts, gateway, transit point, without specifying the region, district or territory. So, we felt that by broadening the language we would at least take away that excuse, and we would provide expressly that the Commission should not discriminate in its rate structure."[6] In the discussion of the bill in the Senate the chairman of the committee in charge of it was asked if he thought the proposed amendment of Par. 3(1) would make toward the equalization of rates in the various regions. And he replied, "I do not think there is any doubt about it at all, because that is the purpose of the bill; it is the intention of the bill."[7] We think Par. 3(1) as thus amended does add new factors to be taken into account by the Commission in determining, under the old and well recognized principles which were before guides to decision in such matters, whether existing rates are unlawful. These new factors are whether such rates are unjustly preferential, prejudicial and discriminatory as between regions, district or territories; and, in our opinion, Par. 3(1) now empowers the Commission to find such rates unlawful even though they would have been lawful in the light of all relevant considerations before the amendment. We may, indeed, take it for granted that they were lawful previous to the amendment since they had been in the main the result of comparatively recent investigations and orders of the Commission. That the Commission correctly interpreted its powers and duties after the amendment appears to be shown by the following quotation from its report: "By the amendment to the substantive antidiscrimination provisions of section 3(1) all discriminations in the form of undue or unreasonable preference or advantage, or undue or unreasonable prejudice or disadvantage, as between regions, districts or territories, viewed as separate entities, were brought directly within the purview of the act along with all the other inhibitions previously included. We were then authorized and directed by the other provisions mentioned to remove any such discriminations found to exist in a proper proceeding. This means that such discriminations as those mentioned which result from differences in the methods of distributing the general rate burden in the several rate-making territories, or from any other cause, if not justified upon proper consideration of recognized elements of rate making applied in the light of the amended law are unlawful and should be corrected."

---

[5] Report No. 433, 76 Cong. 1st Session at page 11.

---

[6] Cong. Rec. Vol. 84, Part 6, p. 5889, 76th Cong., 1st Sess.

[7] Cong. Rec., Vol. 84, Part 6, p. 6072.

We, therefore, hold that the Commission correctly decided that the ad interim order under review was within the scope of its statutory power and proceed to determine whether the order was erroneous in any respect on the other grounds advanced for setting it aside.

First, there should be a brief allusion to the contention that the plaintiff States have no standing to sue as parens patriae but only as shippers and receivers of freight. This point has become more or less academic since there are states who are parties plaintiff who plainly may sue as freight shippers and consignees directly affected by the order. But all the States who are parties are political entities which are also regions or districts within the rate-making territories involved and they are directly affected as such and have an interest in behalf of their citizens and communities above and apart from the rights of any particular shipper or receiver of freight to a continuance of existing rates or the maintenance of others. This we think distinguishes such cases as Oklahoma v. Atchison, T. & S. F. Ry., 220 U. S. 277, 286; Sprunt & Son, Inc. v. United States, 281 U. S. 249; and Alabama Power Co. v. Ickes, 302 U. S. 464, and gives these States standing to sue as parens patriae to preserve or enhance the welfare of their citizens by securing to them the proper administration of federal laws under the principles applied in Georgia v. Pennsylvania R. R., 324 U. S. 439, 446-52.

Our review of orders made by the Commission within the scope of its authority is limited to the following broad considerations and matters incidental thereto: (1) Whether the order is based upon adequate findings; (2) Whether there is substantial evidence in the record to support the findings made; and, (3) Whether the record was made as the result of adequate hearings of which due notice was given to all interested parties and at which those who appeared were fairly permitted to present their evidence and be heard in argument. Board of Trade v. United States, 314 U. S. 534; Rochester Telephone Corp. v. United States, 307 U. S. 125, 140; Atchison, T. & S. F. Ry. v. United States, 284 U. S. 248; Merchants Warehouse Co. *v.* United States, 283 U. S. 501.

We may dispose of the last of these quickly. It is apparent that the Commission did give due notice to all interested parties; that it did conduct numerous and lengthy hearings in various parts of the country involved; and that it did admit into the record and give proper consideration to, after giving a fair opportunity for argument, such relevant evidence as was offered.

In considering the second we are limited to a search for substantial evidence to support such findings as were made. There is such evidence. While it is not uncontradicted, the over-all weight of the evidence cannot be determined by us but is for the sole consideration of the Commission. Questions pertaining to the effect of rates and to rate making are extremely involved and highly technical matters and have to be decided after evaluating intricate evidence which is often based in part upon assumptions. Persons unskilled in those matters are much handicapped in dealing with such subjects and the well established rule is that the expert knowledge of the Commission and its experience, when resorted to and given effect in sufficiently supported findings which are the result of adequate and properly conducted proceedings, should be left undisturbed by the courts under the doctrine of administrative finality. Rochester Telephone Corp. *v.* United States, supra; Interstate Commerce Commission *v.* Illinois C. R. R., 215 U. S. 452; Chicago, St. P., M. & O. Ry. *v.* United States, 322 U. S. 1; Gregg Cartage & S. Co. *v.* United States, 316 U. S. 74.

In considering the first, we must decide whether the so-called primary findings and proof to support them are indispensable to establish the kind of unlawfulness here found by the Commission in the light of the above-mentioned amendment of the Act.

Such primary findings need not be listed again. We now refer to them as set forth in the above statement. They relate in one way or another to what have been held essential to be proved to establish a basis for findings of preference, or prejudice or discrimination as to rates before the amendment of 1940 to Par. 3 (1) of the Act. They are matters which are still pertinent and if evidence to support findings to supply the lack pointed out as to this record had, or could have been, offered it would undoubtedly have been admissible and findings in accord with it would have given added support to the order made. But is is quite another thing to say that all such findings are needed to support the so-called ultimate findings made and the ad interim order based on them. For instance, it has been argued that there can be no increase in class rates in Official Territory unless there is first a so-called primary finding, supported by substantial evidence that the present rates are not compensatory. While that fact, if proved, would have been of much significance the failure to prove it and the consequent lack of a finding that present rates are confiscatory does not leave the Commission's finding that the rates are unlawful unsupported by substantial evidence. It weighed all the evidence and found that it tipped the scales in favor of its ultimate finding that the present rates were unlawful. That basic conclusion if supported sufficiently by other evidence, was enough to justify the exercise of the Commission's statutory power to alter the rates as needed to make them lawful for the future. Pennsylvania R. Co. *v.* United States, 323 U. S. 588; Chicago, B. & Q. R. R. *v.* United States, 60 F. Supp. 580; Scandrett *v.* United States, 32 F. Supp. 995, aff'd 312 U. S. 661; Jefferson Island Salt Mining Co. *v.* United States, 6 F. (2) 315. We think enough was proved and found to warrant such basic conclusion. There was ample evidence on which the Commission found that the class rates in the various territories involved and the interterritorial class rates among those territories were on different levels within the existing classification as well as based upon differing classifications. The Commission found on substantial evidence many so-called primary facts, which need not be enumerated here but which appear in its report, showing transportation costs, composition of traffic, kinds of markets, natural resources, commodities produced or manufactured in the various territories and the parts thereof, and found preference, prejudice, and discrimination as above set forth. Having found the basic facts as pointed out, the Commission was under the duty to exercise its judgment and discretion in determining their effect upon the territories. We may not agree with its decision and we may not agree with the wisdom of the ad-interim order but we have no power to set the order aside because of any such disagreement and substitute our own judgment for that of the Commission. Norfolk & Western Ry. *v.* United States, 287 U. S. 134. For instance, it would be unlawful because discriminatory to try to equalize clearly inherently unequal business conditions, not due to existing freight rates in the various territories or any regions or districts therein, by manipulating rates. Anchor Coal Co. v. United States, 25 F. (2d) 462. We might think that the probable import of this order, but we are bound by the Commission's action in justifiably finding facts to give another, and a lawful, basis for it. Again it is well known that there is a zone of reasonableness between the maxima and minima in rate making in which a carrier may usually set the rates it charges. United States *v.* Chicago, M., St. P. & P. R. R., 294 U. S. 499. We might think these existing class rates are within such a zone, but again we may not interfere with the order for that reason. Nor can other like considerations prevail to brush aside the statutory control over rates which has been confided to the Commission.

It has been earnestly argued that the investigations and order under review are the result of political agitation having for its ultimate object the dislocation of industry from Official territory and its establishment in the other territories, principally in the Southern, and that does appear plausible. Yet such a question is not within the bounds of judicial cognizance but relates to matters of legislative policy. Whether such policy is wise or the opposite is not for us to determine. We can only be concerned with decision as to whether or not the Commission's action was within its power properly exercised under statutory authority which does not go beyond Constitutional limitations. Chicago, B. & Q. R. R. *v.* McGuire, 219 U. S. 549; Rochester Telephone Corp. *v.* United States, supra.

The contention that the order should be set aside as to the Western Lines because confiscatory as to them raises a question of Constitutional limitation under the Fifth Amendment upon the statutory authority which can be conferred upon the Commission. The railroads in Southern territory make no such contention and it would seem that the Western Lines came somewhat late to rely upon any violation of Constitutional safeguards as to them.

From the cost studies relied upon by the Commission after it decided what weight should be given them, the Commission found that what is called less-than-carload traffic is not, when war-time loading is excluded, "yielding, on the average, its out-of-pocket costs plus constant expenses solely related to this traffic, plus the cost of collection and delivery, in any territory except possibly in the southern where the margin of difference between revenues and these expenses is slight." It is, therefore, argued that the confiscatory nature of the ordered reduction in class rates moving in less-than-carload lots is self-evident and that as it does not produce its out-of-pocket costs no trial period is necessary to determine the unlawfulness of the order since an increase in traffic brought about by the lowered rates would obviously but increase the out-of-pocket costs and increase the deficit.

It will be remembered that the Western Lines carry only .6 of one per cent of their total freight at rates affected by this order. We don't suggest that even that is less than enough to entitle them to relief if they can show that they will be compelled to carry it in the future for less than actual cost. But this less-than-carload traffic to which the cost studies relate is not by any means wholly carried on class rates and in its supplemental report of October 30, 1945, the Commission correctly said:

> "The cost data on less-than-carload traffic relates to such traffic as a whole and not solely to that which moves on class rates. In appraising the figures it must be borne in mind that much of this traffic does not move on class rates, but on exception and commodity rates. Obviously, the class-rate traffic bears the highest rates. Consequently, even if under present condition less-than-carload traffic, as a whole, in the West and South is not paying its proper share of the costs, it is possible that such a result is due in large measure to the maintenance of exception and commodity rates. In any event, data based only on averages for all

this traffic do not necessarily demonstrate the impropriety of reductions in the highest level of rates. Even as to class rates on less-than-carload traffic, the record shows that in western trunk-line and southwestern territories many intrastate class rates are maintained which are lower than the corresponding reduced interstate class rates required by our interim order."

The attempt in this court by the Western Lines to break down less-than-carload lot carriage into parts carried wholly on class rates and parts as to which the above finding of the Commission is correct, and to show that the part carried wholly on class rates would not pay its way under the ad interim order has failed in our judgment to measure up to the required standard of certainty by way of proof as to transportation costs for particular commodities. Compare, Baltimore & Ohio R. R. *v.* United States, supra. There is too much assumption and opinion involved in such evidence to justify definite findings, in advance of a trial period, to the effect that the ad interim rates will be confiscatory. See St. Joseph Stock Yards Co. *v.* United States, 298 U. S. 38; Minnesota Rate Cases, 230 U. S. 352; Wilcox *v.* Consolidated Gas Co., 212 U. S. 19; City of Knoxville *v.* Knoxville Water Co., 212 U. S. 1.

Nor is the order erroneous because the carriers were not allowed any alternative method for the removal of the discriminations which make the present class rates unlawful. This was a rate order made under Par. 15 and not an order under Par. 3 in which an alternative must be provided as held in Texas & Pacific Ry. *v.* United States, supra.

The denial by the Commission of the application to reopen the proceedings and receive additional evidence especially as to conditions subsequent to 1939 was not an abuse of its discretion. It is inevitable in such matters that an order by the Commission cannot be based on strictly up-to-the-minute proof. There must be unusual circumstances, not here present, to justify the reversal of an order such as this on the ground that it was based on a stale record. Interstate Commerce Commission *v.* City of Jersey City, 322 U. S. 503. But see, Atchison T. & S. F. Ry.

v. United States, 284 U. S. 248 as limited by United States *v.* Northern Pacific Ry., 288 U. S. 490.

A decree will be entered dismissing the petitions in each case but the dismissal of the petition by the Western Lines will be without prejudice to another suit to restrain the enforcement of the ad interim rates if they are found, after a fair test, to be confiscatory. See Darnell *v.* Edwards, 244 U. S. 564.

If any of the parties desire findings of fact in addition to those made, proposed findings may be submitted to the court within fifteen days.

APPENDIX "B"

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF NEW YORK.

Civil No. 2311

THE STATES OF NEW YORK, DELAWARE, INDIANA, MARYLAND, MICHIGAN, NEW JERSEY, OHIO, WISCONSIN, AND THE COMMONWEALTH OF PENNSYLVANIA,

Plaintiffs,

against

THE UNITED STATES OF AMERICA,

Defendant

Interlocutory Injunction

The States of New York, Delaware, Indiana, Maryland, Michigan, New Jersey, Ohio, Wisconsin and the Commonwealth of Pennsylvania, having filed their verified petition in this Court praying a permanent injunction forever annulling and enjoining enforcement of certain orders of the Interstate Commerce Commission in a proceeding before it entitled Class Rate Investigation, 1939, Docket No. 28300, and praying also an interlocutory injunction enjoining the enforcement of said order pending final determination of its petition; and service of said petition having been made as required by law upon the Attorney General of the United States and the Interstate Commerce Commission; and the Interstate Commerce Commission having intervened as a defendant herein; and the Governors of the New England States and various Western railroads having intervened in this proceeding as additional parties plaintiff; the States of Alabama, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Kansas, Oklahoma, Arkansas, Texas, Nebraska, North Dakota and South Dakota, and other parties having intervened as defendants; and the Honorable Harrie B. Chase, Circuit Judge, and the Honorable John C. Knox, District Judge, having been called to the aid of Honorable Stephen W. Brennan, Judge of this District, as required by Title 28, U. S. Code, Section 47; and an order to show cause having issued and been served upon the Attorney General of the United States and the Interstate Commerce Commission requiring them to show cause before this Court so constituted at a hearing to be held in Room 110, United States Court House in the City of New York, N. Y., on December 13, 1945, at 2:00 P.M., why the interlocutory injunction prayed for by plaintiffs should not issue; and at least five days' notice of said hearing having been given as required by law; and said hearing having been had, the Court sitting in New York City for the convenience of and with the consent and by stipulation of all parties; and plaintiffs and intervening plaintiffs having been heard by counsel and having filed various affidavits with the Court; and the United States having been heard by its Assistant Attorney General, and having filed affidavits with the Court, the Interstate Commerce Commission by its Chief Counsel, and other interveners by their respective counsel; and the Court having considered the verified petition and the affidavits presented to it and the arguments of counsel, the undersigned as such Court now make the following findings of fact and conclusions of law:

Findings of Fact

1. This is a suit brought under the provisions of Title 28, U. S. Code, Sections 41 and 43 to 48 inclusive, seeking an injunction annulling and enjoining orders of the Interstate Commerce Commission in a proceeding entitled *Class Rate Investigation, 1939*, Docket Nos. 28300 and 28310 on the Commission's docket.

2. Plaintiffs are sovereign states and bring this action both as shippers and receivers of freight, on which rates affected by the Commission's orders are charged, and also in their sovereign capacities on behalf of their citizens and communities because of the effect of the Commission's orders upon the states, their citizens and communities.

3. The orders of the Interstate Commerce Commission sought to be enjoined would require, effective January 1,

1946, an increase of ten per cent in the class rates charged by the railroads for the transportation of class rate freight within Official Territory and a reduction of ten per cent in the class rates charged by the railroads for the transportation of such freight as moves under class rates within Southern, Southwestern and Western territories and between the several territories.

4. The class rates are charged by the railroads in Official Classification Territory for the transportation by them of a large variety of manufactured articles, products of industry and agricultural products. The report of the Interstate Commerce Commission dated May 15, 1945, indicates that 5.8 per cent of all carload freight transported in Official Territory moves at class rates. A ten per cent increase in these class rates would impose upon industry, shippers and receivers of freight transported within Official Territory an increased freight cost of many million dollars a year.

5. The ten per cent increase if required and permitted to be charged by the railroads for transportation within Official Classification Territory pending final determination of this suit would subject industries, shippers and receivers of freight, and the citizens and communities of the states in Official Territory to great injury, for which they will have no redress in the event the Commission's orders should finally be held invalid and permanently enjoined, in that the increased charges on shipments at class rates will increase the cost to industries of shipping and receiving their products, will increase the cost of products to consumers, will discourage production and conversion to peacetime operation, and will tend to cause unemployment and consequent local distress.

6. The present class rates in Official Territory which would be continued in effect if an interlocutory injunction should issue suspending the effect of the Commission's orders were prescribed by the Interstate Commerce Commission in 1930, and there has been no complaint in the proceedings before the Commission against these rates and no demand by any shipper, receiver, community or state that these rates be increased.

7. The injury which would be suffered by the industries, shippers, receivers, communities and citizens in Official Territory would greatly exceed any injury to shippers and communities or states in other sections of the country from withholding the reductions in rates ordered by the Commission, pending final determination herein, for the reason that a much greater volume of freight is transported by the railroads within official Territory upon which the class rates are charged, which would be increased ten per cent, than the volume of freight upon which the Commission's orders would require a reduction in the freight rates. The Commission found that the class rates are charged on 5.8 per cent of the carload freight transported within Official Territory, on only 1.8 per cent of the carload freight transported in Southern Territory, .6 per cent of the freight transported in Western Trunk Line Territory, .9 per cent of the freight transported from Southern to Official Territory, and 3.1 per cent of the freight transported from Western Trunk Line to Official Territory. In addition to this, the higher percentage in Official Territory is to be applied to a much greater volume of freight. The Commission found that in a period of two days the carload freight transported within Official Territory aggregated 111,914 carloads, while the carload movement within Southern Territory was only 23,512 carloads, and within Western Trunk Line Territory was only 32,889 carloads. The movement from Southern to Official Territory amounted to only 15,989 carloads and from Western Trunk Line to Official Territory to 12,120 carloads. Computations contained in affidavits presented to the Court indicate that the ten per cent increase in the class rates for transportation within Official Territory of both carload and less-carload freight would cause an increase in freight charges to shippers and receivers of freight in that territory of over $15,000,000 annually, as compared with reductions in the charges for shippers in Southern Territory of not more than one-tenth of this figure.

8. Greater disturbance and confusion would result if the changed rates ordered by the Commission should be per-

mitted to go into effect and the Commission's orders should thereafter be held to be invalid and enjoined.

9. The reduced rates ordered by the Commission with respect to freight transported by the Western railroads would cause a very substantial reduction in their revenues, which they would have no means of recouping, if the Commission's orders should finally be held to be invalid and permanently enjoined.

10. The present class rates in all territories were prescribed by orders of the Commission in various proceedings as maximum reasonable rates and these orders would be operative to maintain the present rates in effect if the orders attacked in this suit should be suspended.

11. Although tariff schedules have already been filed with the Commission by the railroads providing rates to become effective January 1, 1946, in conformity with the Commission's orders sought to be enjoined, the Official Classification railroads and the Western railroads by their counsel have advised the Court that such tariff schedules have been filed only under compulsion of the Commission's orders and that if such compulsion is removed by the suspension and enjoining of said orders, they will take appropriate steps to continue in effect their present class rates.

Conclusions of Law

1. Plaintiffs have capacity to maintain this suit both as shippers and receivers of freight, the rates on which would be affected by the Commission's orders sought to be enjoined. The question as to whether plaintiffs in their sovereign capacities are otherwise proper parties hereto is not now decided.

2. The fact that the railroads under compulsion of the orders have already filed tariff schedules providing rates in conformity therewith, to take effect on January 1, 1946, does not render this suit moot or deprive this Court of power to grant effective relief by interlocutory injunction.

3. There are reasonable grounds for believing that the reports and orders of the Commission may be erroneous, contrary to and without adequate support in the evidence, and should be permanently annulled and their enforcement enjoined. This cannot, however, be determined until final hearing herein and upon examination of the evidence before the Commission which will then be before the Court.

4. There is greater justification for continuing in effect temporarily the present class rates which the Commission has prescribed and under which business has been done for a number of years than for permitting a sudden change in rates required by new orders, the validity of which is open to question.

5. Considering the doubt as to the validity of the Commission's reports and orders, and balancing the conveniences and equities of the situation, the Court in its discretion should issue an interlocutory injunction enjoining and suspending the enforcement of the Commission's orders pending final determination herein.

Wherefore, good cause appearing therefor, it is Ordered, Adjudged and Decreed that an interlocutory injunction be and it is hereby granted enjoining and suspending until further order of this Court the order of the Interstate Commerce Commission dated May 15, 1945, as amended, and its order dated October 30, 1945, in its Docket Nos. 28300 and 28310; and until further order of this Court, said orders of the Interstate Commerce Commission are hereby enjoined and suspended and shall have no force or effect.

And It Is Further Ordered that the United States and the Interstate Commerce Commission and their several officials, agents, servants and attorneys be and they are hereby enjoined from taking any action to enforce compliance with said orders of the Interstate Commerce Commission or prosecuting any alleged violation thereof pending further order of this Court.

Let plaintiffs file a stipulation for costs in the sum of $5000.

APPENDIX "C"

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF NEW YORK

CIVIL ACTION No. 2311

THE STATES OF NEW YORK, DELAWARE, INDIANA, MARYLAND, MICHIGAN, NEW JERSEY, OHIO, WISCONSIN and THE COMMONWEALTH OF PENNSYLVANIA,
Plaintiffs,
against
THE UNITED STATES OF AMERICA,
Defendant.

CIVIL ACTION No. 2337

THE ATCHISON, TOPEKA and SANTA FE RAILWAY COMPANY, ET AL.,
Plaintiffs,
against
THE UNITED STATES OF AMERICA,
Defendant.

Final Decree and Order Continuing Interlocutory Injunction

This cause coming on to be heard before the undersigned sitting as a specially constituted court of three judges pursuant to the Urgent Deficiencies Act, 28 U. S. C., Sections 41, 43-48, and full hearing having been had, the pleadings and evidence having been considered and the parties having been heard by counsel in argument and the cause having been submitted for final decree, and this Court having been fully advised in the premises and having filed its opinion, findings of fact and conclusions of law, it is

Ordered, adjudged and decreed:

(1) The petitions of the plaintiffs herein be and they are hereby dismissed.

(2) Dismissal of the petition filed by the plaintiff railroads in Civil Action No. 2337 is without prejudice to another suit to restrain enforcement of the ad interim rates prescribed in the Commission's orders if those rates are found to be confiscatory after a fair test.

And the parties having further been heard upon petition and motions of the plaintiffs and of certain intervenors for continuance of the interlocutory injunction granted by this Court on December 20, 1945 pending the perfecting and final determination of appeals to the United States Supreme Court and the motion of defendants that said interlocutory injunction be dissolved, the Court hereby makes the following findings of fact and conclusions of law:

Findings of Fact

1. The Court hereby reaffirms and adopts the findings of fact made by it in the order entered herein on December 20, 1945, granting the said interlocutory injunction, as fully as if the said findings of fact were restated herein.

2. If the said interlocutory injunction is not continued pending the perfecting and final determination of the appeals from the final order of the Court herein, the carriers in Official Territory, contrary to their wishes expressed in this Court and solely by reason of the compulsion of the Commission's orders, will be required to file and make effective tariff schedules increasing by ten per cent their class rates charged by them for the transportation of class

rate freight between points in Official Territory, including points in plaintiff States, and the Western Lines will be required to file and make effective tariff schedules reducing by ten per cent their class rates charged by them for the transportation of class rate freight between points in Western Trunk Line Territory and in Southwestern Territory, and to join with the carriers in Official Territory and Southern Territory in reducing by ten per cent their class rates charged by them for the transportation of interterritorial class rate freight.

3. The relative levels of the class rates in the several rate territories affected by the orders of the Interstate Commerce Commission in this proceeding were established by orders of the Interstate Commerce Commission and have been in effect for many years. If the said interlocutory injunction is not continued pending the perfecting and final determination of the appeals from the final order of this Court, the long established class rate relationships among the rate territories would be materially changed, and if the final order of this Court is thereafter reversed by the United States Supreme Court, the disturbance and disruption of business throughout the country would be of serious proportions. Such disruption would cause more hardship to business and to the shippers, receivers, and carriers of freight, than would be caused by the continuance of the long established rate relationships pending the final determination of the appeal from the final order of this Court herein.

4. The Commission's orders, if presently enforced with respect to class rates charged on freight transported by the Western Lines, would cause a very substantial reduction in the revenues of the railroads, which they would have no means of recouping if the Commission's orders should finally be held to be invalid and permanently enjoined.

5. Great and irreparable injury would be done to plaintiffs, their citizens and communities and to the Western Line, if on appeal the orders of the Interstate Commerce Commission are held invalid and if pending appeal their enforcement shall not have been stayed and enjoined and

such injury appears greater than any injury which defendants or intervening defendants might suffer if the Commission's orders are stayed pending appeal and should finally be held valid.

Conclusions of Law

1. The decision of these consolidated causes necessarily involves the determination of novel questions of law of great importance to the shippers, the carriers, and the public of this country. There are reasonable and serious doubts as to the determination of these novel and important questions.

2. Considering the reasonable doubts as to the validity of the orders of the Interstate Commerce Commission herein, the novel character of the questions of law to be determined, the fact that the present class rates were established by the Interstate Commerce Commission itself and have been in effect for many years, and considering the equities of the shippers, the carriers, and the public, the Court in its discretion should continue the interlocutory injunction pending the perfecting and final determination of any and all appeals from the final order of the Court herein.

And, all facts considered, the Court being of opinion and finding that the enforcement of the Commission's orders should be stayed pending appeal from the decision of this Court, now, therefore, it is

Ordered, adjudged and decreed that the motion of the United States and the Interstate Commerce Commission to dissolve the interlocutory injunction granted by the decree of this Court dated December 20, 1945, be and it is hereby denied and that the said interlocutory injunction be and it hereby ~~is~~ continued for a period of sixty days from the date hereof, and if during said period plaintiffs or any of them perfect an appeal to the Supreme Court of the United States, said interlocutory injunction be further continued pending such appeal and until final determination on appeal and order pursuant thereto unless and until otherwise ordered by this Court or by the Supreme Court of the United States. If before the expiration of sixty days from the date hereof no appeal shall have been taken and perfected from the final decree and order of this Court dismissing the petitions, the interlocutory injunction shall thereupon be dissolved and shall thereafter be of no effect.

C. Some important factual considerations 47

PAGE

POINT I—The orders of the Commission requiring a 10 per cent increase in class rates for transportation within official territory are invalid as an attempted exercise by the Commission of authority to prescribe minimum reasonable rates, and its ultimate determination that the then existing class rates previously prescribed by the Commission as maximum reasonable rates were less than minimum reasonable rates in violation of Section 1, paragraphs (4) and (5) (a) of the Interstate Commerce Act was arbitrary and invalid because not supported by essential preliminary findings and because without support of substantial evidence 54

A. The Law 54

B. There is no finding and no evidence to support a finding that the class rates for transportation between points in Official territory are not fully compensatory. Indeed both the evidence and the Commission's findings require the conclusion that the class rates which the Commission ordered increased 10 per cent were already highly profitable 58

C. There is no finding and no evidence to support a finding that the level of the class rates for transportation within Official territory threatens a rate war or otherwise will tend to impair the financial integrity of the carriers 64

D. The Commission's finding predicated upon the returns from Operations of the Carriers in the several territories, that "the revenue needs of the carriers in official territory with respect to their class-rate traffic are greater than is the case as to the class-rate traffic of the carriers in the other territories" is not a finding that the class rates for transportation in Official territory are non-compensatory, sufficient to sustain a minimum rate order requiring an increase in those rates.. 65

PAGE

Point II—To the extent that the orders purport to rest upon a determination that the present class rates create undue prejudice and preference in violation of Section 3(1) of the Interstate Commerce Act, the orders are arbitrary and invalid because not supported by essential preliminary findings and because without support of substantial evidence. The court below erred in not so deciding 69

A. The Law 70

B. There is no finding and no evidence to support a finding that for the transportation of the same kinds of freight from the South and West to Official territory on which class rates are charged within Official territory the railroads demand corresponding class rates. In fact both the findings and the evidence are to the contrary 76

C. The Commission's findings negative any conclusion that the differences in the levels of the class rates are the cause of substantial injury, prejudice and disadvantage to shippers or receivers of freight in the South and West or to those territories as a whole and of preference and advantage to Official territory and shippers therein 80

D. If portions of the Commission's reports are to be interpreted as constituting a finding that the class rates in Official territory and those for transportation from other territories into Official territory are controlled by similar circumstances and conditions, such a finding is arbitrary, contrary to the evidence, and inconsistent with other statements or findings made by the Commission 96

Point III—The Court below and the Commission erred in concluding that the amendment to Section 3(1) of the Interstate Commerce Act by the Transportation Act, 1940 coupled with Section 5(b) to the latter Act so changed the law as to require and sustain the Commission's decision and orders 98

PAGE

POINT IV—The Commission's determination that the class rates are unlawful because not on a uniform level and that the class rates for transportation within Official territory should be increased to approach uniformity is not supported by preliminary findings of fact or by the evidence, and the factual considerations stated by the Commission do not sustain its conclusion 110

A. The Commission's findings as to average cost of transportation and the evidence on this subject do not support the decision and orders 112

B. The fact that there are differences in the kinds of freight, transported within the several territories does not support of the Commission's orders. On the contrary, the evidence as to socalled "consists" of traffic in the several territories precludes an ultimate finding that the class rates are unlawful because not uniform 127

C. The Commission's orders are not supported by the references to the small proportions of freight moving at class rates in the South and West and interterritorially 130

D. The fact that the average rate of return of the railroads in Official territory has been slightly less in recent years than the corresponding average figures for the railroads of the South and West does not support the ultimate finding of undue prejudice and preference in violation of Section 3(1) or the finding that the present class rates in Official territory are less than minimum reasonable rates in violation of Section 1(4) and (5)(a) and does not justify the orders requiring an increase in the latter rates... 132

POINT V—The orders, in requiring a 10 per cent increase in the class rates for transportation in Official territory, in view of the compensatory character of the existing rates, violate Section 15a(2) of the Interstate Commerce Act 134

PAGE

POINT VI—The orders are beyond the authority of the Commission, arbitrary and discriminatory in that they would require shippers and receivers in Official territory to pay increased freight rates for the benefit of the railroads in the South. The lower Court erred in not so deciding 135

POINT VII—The Commission's orders represent an attempt to alter economic and industrial conditions and for that reason are beyond the authority of the Commission 138

POINT VIII—To the extent that the orders rest on a finding of undue preference and prejudice in violation of Section 3(1) they are invalid because they do not leave the carriers an alternative as to the method of removing the rate differences 142

POINT IX—The Court below erred in failing to hold that the evidence does not support the orders which are to take effect in the postwar period, and that the Commission erred in refusing to reopen the proceeding to take evidence as to the present and probable future conditions 147

POINT X—The recent decision and order of the Commission in Ex Parte 162, *Increased Railway Rates, Fares and Charges, 1946*, and the general increases in their freight rates made by the railroads pursuant thereto, have completely altered the rate situation to which the Commission's orders in the *Class Rate Case* were directed and have made those orders obsolete and impossible of enforcement according to their terms so that they should be set aside and permanently enjoined 151

CONCLUSION 156

v.

THE UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION, STATE OF ALABAMA, ET AL.

APPEALS FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF NEW YORK

BRIEF FOR THE STATES OF NEW YORK, DELAWARE, INDIANA, MARYLAND, MICHIGAN, NEW JERSEY, OHIO, WISCONSIN and THE COMMONWEALTH OF PENNSYLVANIA, APPELLANTS

These are three appeals from a decision and decree of a statutory three-judge court for the Northern District of New York denying a permanent injunction to set aside and annul certain orders of the Interstate Commerce Commission. The orders of the Commission would require a revision in the so-called class rates of the applicable railroads for transportation in all that part of the country east of the Rocky Mountains. More particularly, in so far as these appellants are concerned, the Commission's orders would require the class rates for transportation in so-called Official territory in which these States are included to be increased 10 per cent. At the same time it would require a 10 per cent reduction in the class rates for transportation in the South and West and from points in those territories to Official territory.

Opinions Below

The opinion of the specially constituted District Court (R. 1411, *et seq.*) is reported in *State of New York* v. *United States*, 65 F. Supp. 856.

The decisions and orders of the Interstate Commerce Commission (R. 62-386, 429-486), to review which the actions were instituted in the court below, were rendered in Docket No. 28300, *Class Rate Investigation 1939*, and Docket No. 28310, *Consolidated Freight Classification*. These proceedings were heard on a consolidated record and the Commission's decisions therein are reported in 262 I. C. C. 447 and 264 I. C. C. 41. For brevity, the consolidated proceeding is hereinafter generally referred to as the *Class Rate Investigation*.

Jurisdiction of This Court

The action in the court below was brought under the provisions of acts approved June 10, 1910 (38 Stat. L.

149) and October 23, 1913 (38 Stat. L. 219) commonly referred to as the Commerce Court Act and the Urgent Deficiencies Appropriations Act, all as re-enacted in Title 28 U. S. C. A., Section 41(28) and Sections 43 to 48, inclusive, having to do with suits brought to enjoin and set aside orders of the Interstate Commerce Commission. The direct appeals from the final decree of the court below were taken to this Court under the provisions of U. S. Code, Title 28, Sections 47a and 345.

Probable jurisdiction was noted by this Court on October 14, 1946 (R. 1527)*.

The Statutes Involved

The statutory provisions involved are Section 1(4) and (5)(a), Section 3(1), Section 15(1) and Section 15a(2) of the Inte[illegible]te Commerce Act (U. S. C., Title 49) and Section 5(b) [illegible] the Transportation Act, 1940 (U. S. C., Title 49, footnote following Section 3(5) in 1946 supplement, 54 Stat. 902) commonly referred to as the Ramspeck Resolution. These provisions are reproduced in Appendix A hereto.

Statement of the Case

Appellants in No. 343 (the nine States for whom this brief is filed) (R. 1, *et seq.*) and appellants in No. 345, the Western railroads (R. 833, *et seq.*) instituted independent suits in the court below, each seeking an injunction to set aside and annul the Commission's decisions and orders in the *Class Rate Investigation*. The States of New York and Ohio intervened in the railroads' suit (R. 864, 865), and the railroads intervened in the suit of the States (R. 489,

---

* Figures in parentheses preceded by "R." refer to pages of the printed record.

490). The appellants in No. 344, the New England governors, did not file a separate petition in the court below but intervened as plaintiffs in both suits (R. 512, 866). The foregoing actions were consolidated for hearing before the court below (R. 881).

1. The Freight Rate Structure and the Freight Rates Involved

(a) *The territorial divisions*

In the course of the development of railroad transportation and the growth of railroad systems, the country, for the purposes of railroad freight rates and certain other matters, has come to be divided into sections or so-called rate or classification "territories". The boundaries of these territories conform generally, but with exceptions, with termini of the major railroad systems, so that each territory embraces the railroads which are chiefly competitive each with the other and are affected by common physical, traffic and other conditions.

Official or Official Classification Territory, so-called, is roughly that portion of the United States north of the Ohio and Potomac Rivers and east of the western shore of Lake Michigan and of a line extending diagonally to the western bank of the Mississippi River opposite Illinois. Southern or Southern Classification Territory is that section of the country roughly south of the Ohio and Potomac Rivers and east of the Mississippi. Western Classification or Western territory includes the part of the country west of the Mississippi River and also part of Wisconsin. Western Classification Territory is, for certain purposes, subdivided into Western Trunk Line, Southwestern and Mountain-Pacific territories, and there are subdivisions of the other territories which are not material here (R. 4926a).

These major divisions are illustrated on the map on the opposite page, which is a reproduction of an exhibit in the record (Ex. 1, R. 4911).

As will be seen, the nine appellant States and New England are embraced in Official territory, except that portions of Michigan and Wisconsin are in Western territory.

(b) *The classifications and class rates*

The freight rates of the railroads, so far as is here pertinent, may be divided into three general categories commonly referred to as "class rates", "exception rates" and "commodity rates."

Corresponding with the foregoing divisions of the country, the railroads of the country publish and maintain in schedules filed with the Commission three major freight classifications, so-called, known respectively as the Official, Southern and Western Classifications. In these classifications many thousands of articles of freight are listed and are assigned to classes—for example, first class, second class, etc.—for the purpose of determining the freight rates to be charged for transportation by railroad. Then by other tariff schedules filed with the Commission the several railroads publish and maintain freight rates to be charged for the transportation of freight of each of the several classes between practically all points. It is these rates which are known as the class rates.

The Official Classification and the Official Territory class rates are published and maintained by and determine the charges of the railroads for the transportation of classified or class rate freight within Official Territory. The Southern and Western classifications and class rates as their names indicate, determine charges for the transportation of class rate freight within Southern and Western Classification Territories. The tariffs contain rules specifying which classifications determine the ratings and rates for transportation from one territory to another.

For purposes of publication, all three classifications are combined in one volume, called the Consolidated Freight Classification, with uniform rules, regulations and definitions of various articles listed. The classifications or ratings to which many of the articles are assigned, are not uniform in the several classifications. For example, an article may be classified third class in the Official, fourth class in the Southern, and fifth class in the Western Classifications.

As will be pointed out in more detail presently, the class rates are actually charged upon a negligible proportion of the freight transported in Southern and Western territories because the railroads for transportation in these territories have provided lower exception or commodity rates. For transportation within Official territory, however, the class rates are actually charged upon a substantially greater proportion of the total freight and upon a much larger actual volume.

The first class rates, or the rates provided for transporting articles classified first class, are what may be described as the basic class rates, since the rates for the transportation of freight classified in the other classes bear percentage relationships to the first class rates. Formerly the other classes were generally described as second class, third class, etc., but the rates for these classes reflected uniform percentages of the first class rates in each territory, although the percentage relationships between the first class rates and the rates for other classes were not always uniform in all territories (R. 55). More and more, however, it has become the custom to refer to the rates or ratings for classes other than first as column rates or ratings, each column representing a percentage figure, such as column 85, which is 85 per cent of first class, column 35, which is 35 per cent of first class, etc. Thus the number of classes is subject to indefinite expansion to correspond with the number of possible percentage relationships to first class.

It is the class rates to which the orders here in suit are addressed and therefore the facts concerning these rates must be more fully described, which will be done after reference to the other categories of rates.

(c) The exception rates

As their name implies, the exception rates are rates which the railroads have provided for the transportation of freight for which the class rates, for one reason or another, are not considered suitable and for which, therefore, exceptions of rather general application are desired. To this end the railroads publish tariffs providing exceptions to the classification, which provide that either generally throughout a territory or between various points the articles specified, instead of being classified in accordance with the classification ratings, will be classified at lower percentages of first class and will be charged freight rates accordingly.

(d) The commodity rates

The so-called commodity rates are rates which are established for the transportation of specified commodities between particular points. They are often established for articles which are transported in great volume between certain origins and destinations but do not move generally throughout the country. There are many commodity rates for the transportation of raw materials and low grade freight (p.* 564, R. 179; p. 569, R. 184; pp. 593-604, R. 209-219).

A shipper is entitled to the lowest freight rate which the railroads maintain for the transportation of his goods and where there are several different rates in the tariffs for the transportation of the same commodity between the same points the lowest rate is ordinarily the one which is applicable. *United States* v. *Gulf Refining Co.*, 268 U. S. 542.

---

* Figures preceded by "p." indicate pages in the printed reports of the Commission involved in this proceeding, except where the context indicates otherwise.

Hence, although almost every conceivable commodity, other than bulk freight such as coal, is classified in the classifications, so that theoretically there are class rates for its transportation, the class rates are not the rates which are actually charged if the railroads' tariffs provide exception or commodity rates which are lower.

(e) Further facts regarding the class rates and their history

Rates which are merely maintained in tariffs but are not actually charged, because the transportation is provided with lower rates, are commonly referred to as paper rates. *Alpena Leather Corp.* v. *Pennsylvania R. Co.*, 185 I. C. C. 106, 107; *Abingdon Sanitary Mfg. Co., Inc.* v. *Akron C. & Y. Ry. Co.*, 208 I. C. C., 661, 664.

To a very large extent, as has been indicated and as will be shown more fully presently, the class rates are only paper rates in so far as transportation within the South and West and from those territories to Official territory is concerned. Within Official territory, however, the class rates, which the Commission's orders would require to be increased 10 per cent, are rates actually charged on 5.8 percent of the total large volume of carload freight transported within that territory (R. 179, p. 564).

The class rates within Official territory, which the Commission now finds to be less than minimum reasonable rates and orders increased 10 per cent, and the class rates within Southern and Western territories, which the Commission now finds to be excessive and orders reduced 10 per cent, were all prescribed by the Commission itself after extended investigations. *Eastern Class Rate*

Investigation, 164 I. C. C. 314; *Southern Class Rate Investigation*, 100 I. C. C. 513; *Western Trunk Line Class Rates*, 164 I. C. C. 1.

Mile for mile the class rates within Official territory are lower than the class rates within the other territories. Treating the Official territory first class rates as 100 per cent, a table on page 569 (R. 184) of the Commission's report shows that the averages of the first class rates in the other territories for various distances up to 1,000 miles reflect the following percentages of the averages of the Official territory rates:

Southern	137.7 per cent
Western, Zone I	129.6 per cent
Western, Zone II	144.4 per cent
Western, Zone III	159.4 per cent

The class rates within the several territories were, as the Commission's reports in the cases referred to indicate, prescribed in the light of the rate structures, the traffic, transportation and competitive conditions found to exist in each territory. In Official territory the commodity rates charged for the transportation of many raw materials and low-grade manufactured articles are substantially higher than the corresponding commodity rates which the Southern railroads have provided for shippers and receivers in that territory, and the class rates in Official territory generally applicable to the transportation of manufactured articles were made relatively lower in consideration of this fact.

Likewise, the Commission in the *Eastern Class Rate* case, in prescribing the class rates in that territory, was influenced by the fact that the class rates are actually charged on a very large volume of freight which in the South and West is provided with commodity or exception rates which are lower than the class rates in those territories. In these respects the circumstances and the purpose of the class rates in Official territory were noticeably different from conditions in the other territories, where lower commodity and exception rates have been provided for a large proportion of the movement of freight and the class rates are really a negligible part of the rate structure so far as being actually charged.

The Commission remarked upon these important differences in the *Eastern Class Rate* case, saying (p. 391):

> " * * * In the other territories class rates, at least in the past, appear to have been of particular interest to jobbers, and the traffic which they move seems to have been, and perhaps still is, predominantly less than carload. For carload traffic of any important volume commodity rates have generally been provided. This is not the situation in official territory, where a great deal of very important carload traffic moves on class rates. Of the traffic embraced by the revenue test about 68 per cent was carload. Among the commodities which generally move in carloads on class rates in official territory but are given commodity rates in other territories are fruits and vegetables (including apples, cabbage, and potatoes), dairy products, vegetable oils, furniture, wrapping paper, soap, sash, doors, and blinds.
>
> "A corollary of this situation is that, as compared with the class rates, the commodity rates on heavy, low-grade articles in official territory are often relatively high and in the other territories relatively low. While it is difficult to determine the fact with exactness, it is quite clear from general knowledge, and also from evidence here of record, that the spread between the class rates in official territory and those in effect in the South and West is not an accurate index of the differences in general average rate levels, the latter differences being relatively considerably less."

The Commission in the *Western Class Rate* case said (p. 188):

"Class rates in w.t.l. territory appreciably higher than in official territory are justified also by the nature

> and volume of the articles moving under such rates in the respective territories. Many articles handled in enormous volume pay class rates in official territory, whereas in w.t.l. and southern territories they enjoy commodity rates lower than the corresponding class rates. This in a large measure will account for and warrant relatively low class rates in official territory as compared with other territories."

The following table on page 564 of the Commission's report (R. 179) which was based upon Exhibit 228 (R. 11834) and reflected a study of all carload traffic transported on September 23, 1942, shows the proportions of carload traffic upon which the different categories of rates were charged for transportation in the several territories and interterritorially:

Territories (within or from one to another)	Percent of carloads Class rates	Exception rates	Commodity rates
Official	5.8	17.6	76.7
Southern	1.8	6.0	92.2
Western trunk line	.6	.2	99.2
Southwestern	2.4	4.4	93.2
Official to southern	12.6	36.3	51.1
Southern to official	.9	4.9	94.2
Official to western trunk line	12.3	35.4	52.3
Western trunk-line to official	3.1	1.0	95.9
Official to southwestern	22.5	52.0	25.5
Southwestern to official	1.5	3.4	95.9
Southern to western trunk line	1.5	13.5	85.0
Western trunk line to southern	6.1	3.1	90.8
Southern to southwestern	6.1	22.1	71.8
Southwestern to southern	1.2	4.3	94.5
Western trunk line to southwestern	13.0	6.2	80.8
Southwestern to western trunk-line	2.0	3.0	95.0

It will be seen from this table, as will be reiterated hereafter, that the shippers and receivers of freight in the appellant States would be subjected by the Commission's orders to a 10 per cent increase in their freight charges on 5.8 per cent of the total large volume of carload traffic moving in Official territory for the ostensible purpose of bringing about an approach to uniformity with class rates which are charged upon less than one per cent of the total carload traffic transported within the West and only 1.8 per cent of that in the South. This is because the railroads have provided lower exception or commodity rates which are actually charged for transportation in those territories of freight for whose transportation in Official territory the class rates are charged.

It follows, therefore, that the differences in the levels of the first class rates afford no indication as to the comparative levels of the freight rates actually charged for the transportation of the same or similar freight in the several territories.

Moreover, even where the class rates are charged for transportation in the South and West, it frequently happens that the articles are accorded lower classification ratings than in Official territory, so that the resulting rates may be as low as or lower than those charged for the transportation of the same freight within Official territory (R. 123, p. 508).

Furthermore, the differences in the levels of the class rates were influenced by the marked differences in the kinds and volumes of freight transported in each territory. The railroads in each section of the country are necessarily dependent for their livelihood upon the freight originating or terminating in that section and differences in the kinds and quantities of freight to be transported mean differences in the sources of their revenues and in the amounts which they must derive from each kind of freight. Not only are there different kinds and quantities of freight by which the total expense of railroad maintenance and operation must be borne, but the differences invite different theories of rate structure, and these have occurred (R. 1753-1785; 3621-3636; Ex. 15, R. 6037; Ex. 16, R. 6179).

2. The Proceedings before the Commission

(a) *The orders of investigation*

The proceedings resulting in the promulgation of the orders in question were instituted by the Commission on its own motion by two orders dated July 29, 1939 (R. 55, 57) subsequently amended by two orders dated August 1, 1940 (R. 59, 60). The Commission designated its investigation as Docket No. 28300, *Class Rate Investigation, 1939*, and Docket No. 28310, *Consolidated Freight Classification*. Substantially all of the railroads of the country were made respondents in the investigation.

By its orders in Docket No. 28300 (R. 55, 59) the Commission instituted an investigation into the lawfulness of the present class rates for transportation between all points within that portion of the United States east of the Rocky Mountains, and the Commission indicated that the principal matters to be investigated pursuant to these orders were whether or not there should be a uniform scale of class rates to be charged for transportation throughout the portion of the country described, or whether there should be several scales of class rates in different sections of the country and, if so, the relationships which should exist between them. By its orders in Docket No. 28310 the Commission instituted an investigation into the lawfulness of the freight classifications in effect throughout the entire United States and indicated that the principal issues to be investigated were whether or not there should be a single uniform classification, or whether there should be different classifications and, in either event, what the different classifications and the ratings therein should be (R. 57, 60, 70).

(b) *The hearings before the Commission.*

In due course, extended hearings were held before the Commission at various points. Many witnesses were heard, including members of the Commission's own staff, officials of railroads, rate experts and statisticians, professors, economists or so-called economists, operators of freight rate bureaus, Governors and other public officials, representatives of many Southern industries who opposed nationwide uniformity of rates, spokesmen for chambers of commerce, and a few shippers who had something to complain of but who generally on cross examination proved to be prospering under the existing rate adjustment.

Following the hearings, many briefs were filed and oral argument was had before the Commission. Contrary to the Commission's usual custom in proceedings of this sort, no recommended report and findings of its Examiners were submitted to the parties for the purpose of consideration and exception.

(c) *The evidence.*

For the convenience of the Court, if it can be called a convenience, the entire record of the testimony and exhibits before the Commission which was filed in the lower court has been printed. As so printed, it consists of 21 volumes with a total of 12,719 pages. Obviously, it would extend this brief beyond all reasonable limits to attempt herein an abstract or even the most summary resumé of the evidence.

Appellants are quite aware of the demands upon the credulity of the Court which are involved in their contention that a record of this magnitude does not contain evidence to support the Commission's orders. However, this contention is most emphatically urged and it is believed that the Court's weighing of its validity and examination of the evidence for this purpose will be eased if detailed discussion of the evidence and, more particularly, reference to the deficiencies in the record are reserved for the argument. For, as appellants submit, the issues involved are such that the character of evidence required to sustain the Commission's orders is quite definitely established by the law, and the complete absence of such evidence can be pointed out and ascertained without attempting to summarize the evidence as a whole.

One large part of the record can be disposed of in so far as this case is concerned because of the fact that it relates to the question of the desirability or possibility of a uniform freight classification. The Commission's orders contain no requirement as to the classifications and therefore this evidence has no direct bearing upon the issues here. Another large segment relates to the so-called Florida arbitraries, which do not play a part in this suit.

To be sure, the record contains a vast amount of testimony and statistics of miscellaneous facts, such as the size and volume of mineral deposits, the views of theorists as to the economic ills of the country, the causes therefor and their cure, and a great many tables of freight rates of different kinds.

However, of evidence that the class rates for transportation in Official territory are not renumerative, that they threaten a rate war or breakdown of the financial integrity of the railroads, or of proof of the costs of transporting freight upon which the class rates are charged (as distinguished from average tonnage costs of all transportation) there is a complete lack. There is also an almost total absence of proof that the same freight upon which class rates are charged in Official territory moves at class rates in the South and West, and indeed the evidence is to the contrary. There is no proof that differences in the levels of class rates have ever prevented the location of an industry in the South, and there is proof to the opposite effect. In short, on these matters which, as appellants claim, are vital to sustain the Commission's orders, there is an absence of evidence—and obviously a lack of evidence cannot be summarized. The one relevant point upon which there is question as to the sufficiency of the evidence that was received is as to the effect of the differences in class rate levels upon shippers in the South and West and their ability to ship in competition with producers in Official territory. But on this point, the Commission has fully reviewed and weighed the proof in its report, and its findings certainly require the conclusion that the evidence fails to establish the existence of substantial injury as a result of the rate differences, which it is submitted that the law requires to sustain a determination that rates are unlawful in violation of Section 3 of the Act.

(d) *The Commission's decision and orders.*

On May 15, 1945, with Commissioners Mahaffie and Patterson concurring only in part and Commissioners Porter and Barnard filing vigorous dissents, the Commission promulgated its first decision, embodied in its report herein (R. 62, 262 I. C. C. 447) and issued its basis order, which is one of the orders sought to be enjoined.

Without reviewing the Commission's main report and order at length at this point, it is enough to say that the Commission found, first, that a uniform freight classification for the entire country would be desirable but that it would require a long time for its preparation and it therefore made no order with regard thereto. It then found that the class rates to be charged in connection with the uniform classification should be upon a uniform basis, distance considered, throughout the entire portion of the country east of the Rocky Mountains and that the present class rates in the several territories were unlawful in violation of Sections 1 and 3 of the Act because of their lack of uniformity. In other words, the class rates for transportation in Official territory previously prescribed by the Commission as maximum reasonable rates were found to be unlawful because lower than the class rates in the South and West, and the class rates in the South and West were found to be unlawful because higher than the class rates within Official territory, and the class rates for the different sections of Western territory were found to be unlawful because on different levels. The Commission determined and set out in its report a mileage scale to be the basis of the uniform class rates to be established. However, it concluded that uniform rates in accordance with this scale could not be brought about until a uniform classification could be made ready. Meanwhile, it concluded that there should be an "approach" to uniformity and to this end it determined that the class rates for transportation within Official territory were unlawful to the extent that they were less than 10 per cent higher than their present levels and that the class rates for transportation in the South and West were unlawful to the extent that they were higher than 10 per cent below their present levels. By its order it directed that the class rates in Official territory be increased 10 per cent and that the class rates for transportation in the South and West and from those territories to Official territory should be reduced 10 per cent.

Commissioner Porter, in his dissenting expression said (p. 712, R. 327):

> "In my opinion, the record falls far short of supporting the finding that to be just and reasonable, and free from undue prejudice and preference, the class rates throughout the area east of the Rocky Mountains must be placed in the strait-jacket of a uniform distance scale."

Commissioner Barnard in his dissent said (pp. 725 and 728; R. 340, 343):

> "I am of the opinion that the record in this proceeding does not support or warrant the findings and conclusions reached by the majority and, therefore, I dissent."

* * * * *

> "I am unable to find in this record sufficient evidence to support the claim of the Southern Governors Conference that the class rate structures within the

South and between the South and official territory have restricted the industrial growth of the South and have favored and stimulated the growth of industry in the North. On the contrary, the evidence shows that the South has progressed industrially during the last decade much more rapidly than any other section of the country. Furthermore, the evidence fails to convince me that the products of the South cannot compete with the products of official territory in that territory, but for the purpose of the argument, let it be assumed that the contrary is true. Nevertheless, if true, it does not come about because of the difference in the class rates but is due to other causes which have no connection whatever with these rates."

Commissioners Mahaffie and Patterson concurred with the majority only in part. Commissioner Mahaffie said (p. 708; R. 323):

> "With that portion of the report which requires a permanent readjustment of class rates I do not agree. As to what I consider its defects I am in accord, in the main, with COMMISSIONER PORTER's comments in his dissent herein. In a country so vast as this with its widely varied resources and differing transportation needs it seems to me a mistake to try to compel general equality in rates except to the extent equality is justified by transportation conditions. I think the effort to do so must necessarily fail. But I am afraid the process of finding out whether it can be done will be painful and costly."

Commissioner Patterson agreed "with much of what COMMISSIONER PORTER has to say in criticism of the majority report." He expressed the view (pp. 708-709; R. 323-324):

> "that there should be an '*ad interim* class rate revision' in connection with which an increase in official territory class rates, as contemplated by the majority report, should be tentatively approved, subject to protest and suspension, but that such increase

> may not be required. I find no justification for the action of the majority in entering a minimum-rate order."

He said further (p. 709; R. 324):

> "I do not subscribe to the 'Ultimate Findings' of the majority. In my opinion any attempt to prescribe the rates to apply in connection with a uniform classification which is not yet in existence is premature."

Thereafter, in July 1945, and within the period allowed therefor by the Commission's Rules of Procedure, petitions for reconsideration were filed with the Commission on behalf of appellants, of various chambers of commerce and commercial organizations, of various groups of shippers, and of various railroads. In some of these petitions it was alleged that greatly changed conditions, both as to transportation and as to industrial production, had been brought about by the war and thereafter by reconversion, and that because of these circumstances the evidence, relating as it did almost entirely to conditions in 1939 or the early war years, was stale and, apart from all other considerations, would not for this reason support an order prescribing rates for the future (R. 416, 417). It was alleged that the war conditions had prevented many interested parties from presenting evidence and that it would be unjust to subject them to changed rates unless and until the respondent railroads should establish and make effective the changed rates prescribed thereby on November 30, 1945 upon not less than thirty days' notice, instead of upon August 30, 1945 (R. 418, 419). By order, dated October 26, 1945, the Commission further amended its order of May 15, 1945 to require that the changed rates prescribed therein be made effective on January 1, 1946 upon not less than thirty days' notice (R. 431).

On or about November 1, 1945, the Commission issued its supplemental report, dated October 30, 1945 (R. 432), and its order pursuant thereto of the same date (R. 479). The Commission in this supplemental report found that certain changes should be made in its original report and order, but it denied the petitions for reconsideration filed on behalf of appellants and others, refused to grant reconsideration or further hearing for the receipt of evidence as to conditions at the present time, and affirmed its previous decision and interim order that as an interim adjustment the class rates within Official territory should be increased 10 per cent. Without any further evidence before it, it made certain additional findings of fact, some of which are more particularly referred to hereafter. Again Commissioners Porter and Barnard dissented (R. 478).

When the Commission refused to postpone its order, the railroads, solely under the compulsion thereof, were compelled to file tariff schedules making the rate changes required, but when an interlocutory injunction was granted staying the enforcement of the Commission's orders these tariff schedules were set aside.

3. The Decision of the Court Below

As promptly as possible after the Commission's last decision and order these suits were instituted. The statutory three-judge court (Judges Chase, Knox and Brennan) granted an interlocutory injunction staying the enforcement of the Commission's orders pending its decision upon the merits.

Following a hearing, at which, as has been said, the entire record before the Commission was offered in evidence and additional evidence was presented by the Western railroads, the court announced its final decision denying a permanent injunction. It is difficult to follow and summarize the reasoning of the court:

The court made no independent findings of its own but simply adopted the findings made by the Commission. The court said that there was ample evidence to sustain the Commission's finding that the class rates in the several territories are upon different levels, a fact which of course is not contested by anyone. It held that the Commission could require an increase in the class rates in Official territory without a primary finding supported by substantial evidence that the present rates are not compensatory. It made various statements, cited in appellants' assignment of errors, with regard to the Commission's findings which are not borne out by the Commission's report. It apparently rested its decision largely upon the conclusion that the amendment made to Section 3 of the Act by the Transportation Act, 1940 empowered the Commission to make the orders under attack.

Thereafter, however, after further hearing, the court certified to reasonable doubt as to the correctness of its decision and continued the interlocutory injunction pending the appeal to this Court.

4. The Historical Background of the Proceeding

Both the proceedings before the Commission and the legislative changes which have played an important part in its action and in the decision of the court below must be viewed in the perspective of their historical background if they are to be properly understood and judged.

It is a historical fact, amply documented by the testimony of witnesses before the Commission, that the Commission's orders were the culminating act in a chain of events which began years before with the decision of the Governors of several of the Southern States to inaugurate a campaign for the promotion of the industrial development of their States. A remarkably aggressive campaign of advertising was instituted by the Southern Governors

Conference, examples of which are to be found in the record here (Exhibits 160, R. 10293; 180, R. 10848), in which the advantages of the South for the location of manufacturing enterprises were stressed and the great successes of the Southern States in attracting new industries were extolled.

Ignoring the freight rate advantages which Southern communities and industries have had in the form of many substantially lower rates than were available in the North for the transportation of raw materials to manufacturing points and their numerous exception and commodity rates, the Southern Governors hit upon the fact that the class rates for transportation in the South and from the South to Official territory (which rates were generally not paid because lower commodity or exception rates were available) were higher than the class rates for transportation within Official territory for corresponding distances and that for the transportation of certain goods from the South to Northern markets the interterritorial rates were somewhat higher, distance considered, than the rates within the North. They apparently conceived the idea of a campaign for "uniformity" of freight rates—not uniformity of all rates but uniformity of rates where the published rates in the South were higher than those for transportation in the North. There was much in the press, in magazines, and in speeches regarding rate discrimination against the South. It was testified before the Commission here that "in the early part of 1937, the agitation started through the Southern Governors Conference for a revision in the rates on certain commodities" (R. 2429, 3837).

The first action in the way of rate litigation was the so-called *Southern Governors Case, State of Alabama* v. *New York Central R. Co.*, 235 I. C. C. 255, in which complaint was made to the Commission against the rates from Southern producing points to destinations in Official territory on a few specified commodities. In this case, following the thesis of a pamphlet issued by the Tennessee Valley Authority and prepared by an economist who is now a member of the Commission and was one of those concurring in the majority report and the orders here under attack, it was alleged that the rates from the South were unlawful to the extent that they were on a higher level than the level of the rates on the same freight obtaining in the territory of destination.

The late Commissioner Eastman, one of the ablest and fairest men ever to sit upon the Commission, had this to say in his report in that case concerning the atmosphere in which the Commission was called upon to render its decision (p. 333):

> "The Commission is called upon to decide this case, on the record, after it has in effect been decided, in advance and without regard to the record, by many men in public life, of high and low degree, who have freely proclaimed their views on what they conceive to be the basic issues. Their thesis has been that the section of our country generally known as the South is our 'Economic Problem No. 1', because, among other things, it is low in industrial development, and that a major reason for this condition has been and is an unfair adjustment of freight rates which has favored the producers of the North and burdened those of the South. It has become a political issue. While, however, the South gave birth to the issue, public representatives of the West now cry out against like supposed oppression, and public representatives of the North or East, as it is variously called, have risen in defense of their section.
>
> "Under such conditions, it is not easy to decide the case without being influenced by emotional reactions, one way or the other, which should play no part in the decision."

Shortly after the decision in the *Southern Governors Case*, the Commission issued its orders of investigation in this proceeding. Although ostensibly a proceeding of investigation on the Commission's own motion, it was testified regarding its origin that there was "no doubt but what Governor Graves (of Alabama) beat the tom-toms" (R. 3836, 3887).

The able Assistant Attorney General, at the hearing before the three-judge court on the application for an interlocutory injunction, referred to the investigations as responsive

> "to a ground swell of agitation about it over a number of years" (Transcript, p. 72).

The campaign entered the halls of Congress and various bills were introduced, which by their terms would require the Commission to prescribe uniform class rates and ratings for the transportation of manufactured articles or would make it unlawful for the railroads to maintain different rates for transportation in different sections of the country. None of the bills of this character was enacted, but there finally emerged the so-called Ramspeck Resolution, which was adopted as Section 5(b) of the Transportation Act, 1940. It will be referred to more fully presently, but it is sufficient at this point to state that it authorized and directed the Commission to institute an investigation into the freight rates for transportation from one territory to another.

The Southern Governors' freight rate campaign was also reflected in many expressions on the floors of Congress, reported in the Congressional Record. Thus the Chairman of the Senate Committee on Interstate and Foreign Commerce congratulated the Senator from Alabama upon his influence in that there were two Commissioners from Alabama upon the Interstate Commerce Commission, one of them the author of the T.V.A. study on freight rates (Congressional Record, Vol. 84, p. 5889, Part 6, May 22, 1939) who joined in the Commission's decisions in the *Southern Governors* case and in this proceeding. The occasion of the congratulations referred to confirmed the faith of a Southern Congressman, who on the floor of the House some time before had said (Congressional Record, p. 5555, Appendix, Vol. 86, Part 17, 76th Congress, Third Session):

> "During the past few years, we have won notable victories for the removal of the interterritorial discriminations. When President Roosevelt became President the South had only one member of the eleven members of the Interstate Commerce Commission. President Roosevelt has given the South four members on the Commission and has publicly declared a deep interest in the removal of the discriminations. It was with sore regret that I witnessed the resignation of Mr. Marion Caskie from the Commission, but you may be assured that we, your Representatives in Washington, are insisting that the vacancy be filled by the appointment of a southern man who understands the interterritorial problem and who will be absolutely fair to the South. I have faith to believe that such a man will be appointed."

It was contended by counsel for the United States in the lower court that no point should be made of the agitation and the atmosphere thus created because it reflected the operation of the democratic process. It is not suggested here that if rate making by the legislative action of Congress is sought, a campaign of publicity may not be appropriate. We have, however, a system of regulation under which rates are to be changed, not by act of Congress pursuant to popular outcry from one group or another, but solely on the basis of findings by the Commission, based upon evidence after an impartial hearing. Rates are not unlawful in violation of the Act merely because an active section of the people claims that they should be changed or thinks that railroad tariffs are cumbersome or that a more consistent rate quoting method would be desirable.

In this connection, moreover, it should be noted that the loudness and persistence of the agitation regarding freight rates made by the Southern Governors and other spokesmen should not be taken as proof of unanimous sentiment even in the South, or of general dissatisfaction with the existing rates. This is indicated by the fact that when the Commission instituted its investigation and held extended hearings, to which great publicity was given, only a paltry number of actual shippers or manufacturers in the South had sufficient interest in the matter to attend the hearings and present testimony. And as the Commission itself has found, and as will be shown later in this brief, it developed that in large part the rates which they complained of were not the class rates at all and that where complaint was made of the class rates they had not in any way operated to curtail the ability of the shippers to produce and ship their products into Northern markets (R. pp. 615-619, 670, 671, 673, 720, 721; R. 230-234, 285, 288, 335, 336). On the contrary, there was very vigorous testimony from representatives of manufacturing industries in the South and from the sort of industries which the Southern Governors desired to attract to their States in opposition to the plea for uniformity. This opposition was predicated largely upon the importance to them of the low rates on their inbound raw materials and of the fact that the railroads had provided reasonable rates for their outbound products (p. 615, R. 230).

We cite the agitation in the background of this proceeding because, as will be later pointed out, it may explain why, in the face of a complete absence of evidence, as we contend, which under previously established principles and interpretations of the Interstate Commerce Act would be required to sustain the Commission's determination and orders, the Commission has nevertheless been led to its decision that the law requires that class rates be found unlawful if not on a uniform level throughout the country.

Finally, it should be said that appellants regret and hope that the sectional aspects of this litigation may be ignored lest they tend to obscure the more fundamental and far-reaching features of the proceeding, which go to the integrity and administration of our regulatory system and therefore concern the country as a whole. Despite the fact that the Commission's orders would injure the appellant States by imposing a substantial increase in the costs of railroad transportation therein while the portions of the orders requiring reductions in the South and West would benefit but an insignificant fraction of traffic in those territories, much the most serious features of the case are the two basic conceptions upon which, apparently, the Commission has acted; namely, that the law requires uniformity of class rates, and that the Commission may require uniformity even at the expense of imposing additional freight charges on a large section of the country without findings or evidence of facts which would ordinarily be necessary to justify the exercise by the Commission of minimum rate power or sustain a determination that Sections 1 and 3 of the Act are violated.

5. The Principal Issues

Despite the great importance of the subject matter, the size of the record and the all too lengthy details which are necessary to a complete statement of the case and to its argument, the principal issues involved are few and may be stated briefly and simply.

1. May the Commission, as an exercise of authority conferred by the Interstate Commerce Act to prescribe minimum reasonable rates, order the railroads in one section of the country to increase their class rates charged by them for the transportation of an important part of their total freight, thereby imposing an added freight burden of many millions of dollars annually on shippers and receivers in that territory, for the purpose of bringing

about an approach to uniformity in the level of those class rates with the level of class rates in other territories;

(a) When there is no finding and no evidence to support a finding that the class rates so to be increased are not adequately compensatory for the service rendered, nor is there any finding or evidence that such class rates threaten a rate war or a destruction of railroad revenues, and when, on the contrary, the evidence shows and the Commission finds that the class rates to be increased are already highly profitable to the carriers for their services;

(b) When the class rates to be increased are actually charged on a large volume of freight while the class rates in other territories with which they would be equalized are charged upon a very small percentage of freight because the railroads in the other territories have provided lower exception or commodity rates, so that uniformity of class rates would not mean equalization of rates actually charged?

2. May the Commission determine that class rates result in undue prejudice and preference as between territories in violation of Section 3 (1) of the Act because they are on different levels in the different territories and thereupon order the lower class rates to be increased to bring about uniformity of levels;

(a) When there is no finding or evidence to support a finding that the corresponding class rates are actually charged and paid in the several territories and when, on the contrary, the findings and evidence indicate that in large part freight which is transported at the class rates to be increased in Official territory is charged at lower commodity or exception rates in the other territories;

(b) When there is no finding and no evidence to support a finding that the differences in the levels of the class rates are the cause of any substantial injury to individual shippers or to territories as a whole and the findings and evidence are to the contrary, and

(c) When the class rates in each territory were prescribed by the Commission after hearings and in the light of the different conditions found by it to exist in the several territories and there is no finding nor evidence that such conditions have changed?

3. Did the amendment made to Section 3 (1) by the Transportation Act, 1940 and the so-called Ramspeck Resolution constitute a mandate to the Commission to prescribe uniform class rates in all territories and so change the law as to empower the Commission to do the foregoing things despite the absence of the findings and evidence described and previously held essential thereto?

4. As a result of such legislation, are class rates unlawful merely because on different levels in different territories and because there are not corresponding differences in the average costs of transporting all freight in the several territories?

5. Did the court below err in declining to take judicial notice that conditions affecting freight rates probably changed radically as the result of the war and then of reconversion, and in not setting aside the Commission's orders which were based on evidence relating largely to conditions in 1939 and the early war years pending further consideration by the Commission of such changed conditions?

6. Have the general increases in all rates, including the class rates, made by the carriers pursuant to a recent investigation, decision and order of the Commission, Ex Parte 162, *Increased Railway Rates, Fares and Charges,*

1946, in the light of increased costs and changed conditions since January 1, 1946, which increases have completely altered the rate structure and eliminated the rates to which the orders here in suit were addressed, rendered such orders obsolete so that they should now be annulled?

Specification of assigned errors intended to be urged

Appellants intend to urge all of the errors assigned in their assignment of errors (R. 1455-1465).

Summary of Argument

Preliminary: The Commission is a regulatory agency of broad powers, but the importance of the matters with which it deals and the scope of its functions require that its action be scrutinized lest it transcend the limits of its authority. The Commission is not the manager of the railroads. *United States* v. *Illinois Central R. R.,* 263 U. S. 515, 522; *Interstate Commerce Commission* v. *Columbus & Greenville Ry.,* 319 U. S. 551, 560. A zone of reasonableness exists between maximum and minimum rates and within this zone carriers are ordinarily free to adjust their charges. *United States* v. *Chicago, M. St. P. & P. R. Co.,* 294 U. S. 499. Since it is the function of the Commission only to enforce the Interstate Commerce Act, it may not require rates to be changed because it differs with the business policy or economic theories of railroad management, nor for the purpose of bringing about a shift in the location of industry or of equalizing disadvantages of industries due to location. The Commission may require freight rates to be changed only upon a finding that they violate one of the provisions of the Act. And it must make precise findings as to why and the respects in which the existing rates violate the statute. Its orders and ultimate findings of violations must be based upon essential preliminary findings of fact supported by evidence of record. In the absence of such preliminary findings, the courts will not examine the evidence in order to determine whether such findings could have been made, nor may essential preliminary findings be supplied by implication. *United States* v. *Chicago, M. St. P. & P. R. Co.*, 294 U. S. 499, 504, 505; *Florida* v. *United States*, 282 U. S. 194, 215; *United States* v. *Carolina Freight Carriers Corp.*, 315 U. S. 475. The Court will however, examine the evidence to determine whether the preliminary findings of fact which are made are supported by substantial evidence. *Int. Com. Com'n.* v. *Louisville & Nash. R. R.*, 227 U. S. 88, 91; *Florida* v. *United States*, 282 U. S. 194. Furthermore, since the Commission is authorized to change rates only if it finds after hearing that existing rates are unlawful, its findings and orders must be based upon evidence presented to it at such hearings and not upon its own independently held ideas as to what is economically desirable. *Southern Pacific Co.* v. *Interstate Commerce Commission*, 219 U. S. 433, 444; *Anchor Coal Co.* v. *United States*, 25 F. (2d) 462, 472.

1. The orders of the Commission requiring a 10 per cent increase in class rates for transportation within Official territory, which would impose an added freight cost of many millions of dollars annually upon shippers and receivers of freight in the appellant States, are invalid as an attempted exercise by the Commission of authority to prescribe minimum reasonable rates and its ultimate determination that the existing class rates which were previously prescribed by the Commission as maximum reasonable rates had become less than minimum reasonable rates in violation of Section 1, paragraphs (4) and (5) of the Interstate Commerce Act was arbitrary and invalid because not supported by essential preliminary findings and because without support of substantial evidence.

The Commission may determine that rates are less than minimum reasonable rates and order them increased only if it makes preliminary findings supported by evidence, that the rates are non-compensatory or cast a burden on other traffic, or threaten ruinous rate wars and disruption of a lawful and reasonable rate structure, or otherwise jeopardize the carriers' financial ability to provide the public with adequate economical and efficient transportation services. *Texas & Pacific Ry. Co.* v. *United States,* 289 U. S. 627, 633; *Anchor Coal Co.* v. *United States;* 25 F. (2d) 462, 471, 472; *United States* v. *Chicago, M. St. P. & P. R. Co.,* 294 U. S. 499, 506.

There is a complete absence here of any such findings or of evidence that the class rates in Official territory or the differences in levels of the class rates produce such effects or that the class rates for transportation between points in Official territory are not fully compensatory.

The Commission's finding that comparisons of rates of return indicate that the revenue needs of the carriers in Official territory with respect to their class rate traffic are greater than is the case as to the carriers in other territories, is not a finding sufficient to sustain a minimum rate order requiring an increase in rates, since it does not appear that the relative rates of return are due to the class rates or that an increase in the class rates would raise the rate of return of the Official territory railroads, or that the rate of return of those railroads is inadequate.

On the contrary, the Commission's findings and the evidence demonstrate that the class rates which the Commission ordered increased 10 per cent were already highly profitable and there is, therefore, no justification for requiring Official territory shippers to pay still higher rates. In such circumstances this Court has repeatedly held invalid orders of the Commission requiring increases in rates for the purported purpose of increasing revenues. *Florida* v. *United States,* 282 U. S. 194, *Florida* v. *United*

States, 292 U. S. 1, 8; *United States* v. *Chicago, M. St. P. & P. R. Co.*, 294 U. S. 499, 507, 508; *North Carolina* v. *United States*, 325 U. S. 507, 516.

2. To the extent that the orders purport to proceed on the theory that the differences in the levels of the class rates create undue prejudice and preference in violation of Section 3(1) of the Interstate Commerce Act, the orders are arbitrary and invalid because not supported by essential preliminary findings and because without support of substantial evidence. The court below erred in not so deciding. No finding of undue prejudice and preference may be made because of differences in the levels of the class rates unless it appears that they are the rates actually charged. Discrimination is something more than a difference in rates. *Texas & Pacific Ry. Co.* v. *United States*, 289 U. S. 627. There must also be a competitive relationship between the party prejudiced and the party preferred, and a finding that the difference in rates is the cause of substantial injury to the former or benefit to the latter.

Further, before undue prejudice and preference may be found it must be established that the differences in rates to competing shippers or localities are not justified by differences in transportation conditions. Where the disparity in rates is due to differences in transportation conditions, the differences may not be held to cause discrimination. To require the elimination of differences in rates under such circumstances for the benefit of the supposed prejudiced party would be to equalize the fortunes of shippers. This neither the carriers nor the Commission may do. *United States* v. *Illinois Cent. R. Co.*, 263 U. S. 515, 524; *Anchor Coal Co.* v. *United States*, 25 F. (2d) 462, 473. The prohibition contained in Section 3(1) against discrimination is directed to carriers subject to the Act and there can be no finding of undue prejudice and preference unless there is a preliminary finding that the same carrier or carriers are responsible for or control both the preferential and prejudicial rates. *Texas & Pacific Ry. Co. v. United States*, 289 U. S. 627, 650; *Central R. R. Co. of New Jersey* v. *United States*, 257 U. S. 247.

There is a complete absence of such essential preliminary findings here and of evidence to support them. There is no finding nor evidence to support a finding that the commodities moving on class rates in Official territory also move on class rates from the South and West to Official territory. On the contrary, the Commission's findings and the evidence indicate that on the traffic moving from the South and West to Official territory the railroads have generally provided lower exception and commodity rates so that the class rates are merely "paper rates" which cannot be the cause of undue prejudice and preference since they are not charged. There is also no finding that the differences in the levels of the class rates have caused substantial injury to shippers in the South and West or have curtailed or restricted the industrialization of the South. The Commission's summary of the economic evidence in this regard, contained at pages 619 to 624 of its report, and also set forth at pages 91 to 94 of this brief, negative any such suggestion. The findings and evidence show that the South has prospered and has had a greater industrial growth than the rest of the country. The Commission made an express finding that no specific instance was proved where an industry was not established in the South because of the class rate level (R. 237).

There is no finding nor evidence that the class rates within Official territory and those applicable to transportation from the South and West into Official territory are controlled by similar circumstances and conditions and the findings and evidence are to the contrary.

3. The court below and the Commission erred in concluding that the amendment to Section 3(1) of the Interstate Commerce Act by the Transportation Act, 1940, coupled with Section 5(b) to the latter Act so changed the law as to require and sustain the Commission's decision and orders. The Commission was influenced by the agitation for rate uniformity and not by the language of the provisions. It made the same sort of an error as it did in construing the so-called Hoch-Smith Joint Resolution and in making certain orders thereunder which were held invalid by this Court in *Ann Arbor R. Co. v. United States*, 281 U. S. 658, and *Atchison, Topeka and Santa Fe R. Co. v. United States*, 284 U. S. 248.

4. Factual grounds upon which the Commission rested its determination that the class rates are unlawful because not on a uniform level are not supported by preliminary findings of fact or by the evidence and do not sustain its conclusion.

The cost computations upon which the Commission relied as indicating the relative costs of transporting freight in the several territories are estimated of average costs of handling all kind of freight and do not purport to show the costs of handling class rate traffic in the respective territories. These cost studies have numerous other major defects. The Commission's conclusions are directly in conflict with the conclusions reached by it in *Western Trunk Line Class Rates*, 164 I. C. C. 1, 188, and *Commonwealth of Kentucky v. Ahnapee and W. Ry. Co.*, 213 I. C. C. 297, 308, in which it expressly held that the average cost of handling traffic could not be considered indicative of the cost of handling class rate traffic. See also *Nor. Pac. R. v. Dept. of Public Works*, 268 U. S. 39, 43, 44; *Baltimore & O. R. Co. v. United States*, 298 U. S. 349, 380 and *Calif. Growers and Shippers Protective League v. So. P. Co.*, 129 I. C. C. 25, 52.

Neither does the fact that there are differences in the kinds of freight transported within the several territories support the Commission's orders. On the contrary, the evidence as to so-called "consists" of traffic in the several territories precludes an ultimate finding that the class rates are unlawful because not uniform. In Official territory the carriers have followed the policy of maintaining rates on manufactured and other products of high value which are lower than the rates maintained in the South and West and have maintained relatively high rates on raw and low grade materials, whereas the railroads in in the South and West have followed a policy of maintaining low rates on this character of freight.

The Commission's orders are not supported by the references in its report to the small proportions of freight moving at class rates in the South and West and between those territories and Official territory. The fact that only a small volume of freight moves on class rates in territories other than Official territory, indicates only that the carriers in those territories have established lower exception and commodity rates on which the traffic moves.

The fact that the average rate of return of the railroads in Official territory has been slightly less in recent years than the corresponding average figures for the railroads of the South and West does not support the ultimate finding of undue prejudice and preference in violation of Section 3(1) or the finding that the present class rates in Official territory are less than minimum reasonable rates in violation of Section 1(4) and (5) (a) and does not justify the orders requiring an increase in the latter rates. There is no finding and no evidence that would support a finding that the differences in the rates of return of the carriers in the several territories are due to the class rates. On the contrary the evidence shows that the class rates in Official territory are the most profitable.

5. The orders in requiring a 10 per cent increase in the class rates for transportation in Official territory, in view

of the compensatory character of the existing rates, violate Section 15a(2) of the Interstate Commerce Act. That section requires that rates shall be established in consideration of the lowest cost consistent with the furnishing of adequate and efficient transportation services. Since the existing class rates are profitable the increase ordered therein violates this section.

6. The orders are beyond the authority of the Commission, arbitrary and discriminatory in that they would require shippers and receivers in Official territory to pay increased freight rates for the benefit of the railroads in the South. The lower Court erred in not so deciding.

7. The Commission's orders represent an attempt to alter economic and industrial conditions and for that reason are beyond the authority of the Commission.

8. To the extent that the orders rest on a finding of undue preference and prejudice in violation of Section 3(1) they are invalid because they do not leave the carriers an alternative as to the method of removing the rate differences.

9. The court below erred in failing to hold that the evidence does not support the orders which are to take effect in the postwar period, and that the Commission erred in refusing to reopen the proceeding to take evidence as to the present and probable future conditions.

10. The recent decision and order of the Commission in Ex Parte 162, *Increased Railway Rates, Fares and Charges, 1946*, and the general increases in their freight rates made by the railroads pursuant thereto, have completely altered the rate situation to which the Commission's orders in the *Class Rate Case* were directed and have made those orders obsolete and impossible of enforcement according to their terms so that they should be set aside and permanently enjoined.

ARGUMENT

Introduction

A. Some general comments upon the nature and scope of, and the limitations upon, the authority and functions of the Commission

The Commission is a regulatory agency of broad powers. It must often act upon complicated and detailed statistics and evidence of many technical matters. Hence, its decisions on the evidence should not be lightly disturbed. Its functions extend to matters of vital import to the economy of the country. The very importance of the matters with which it deals and the broad scope of its authority require, however, that its action be closely scrutinized lest it transcend the bounds which Congress has placed upon its authority.

Of these limits there are several which are pertinent here, which have been clearly defined by the decisions of this Court and of the Interstate Commerce Commission itself. Thus it is well settled that the Commission is not the manager of the railroads, and that matters of business or pricing policy are not for it to determine, provided the rates actually charged are just, reasonable and nondiscriminatory measured by recognized standards.

In *United States* v. *Illinois Cent. R. R.*, 263 U. S. 515 (1923), this Court said (p. 522):

> "A carrier is entitled to initiate rates and, in this connection, to adopt such policy of rate-making as to it seems wise. *Interstate Commerce Commission* v. *Chicago Great Western Ry. Co.*, 209 U. S. 108, 118-119; *Southern Pacific Co.* v. *Interstate Commerce Commission*, 219 U. S. 433; *Interstate Commerce Commission* v. *Louisville & Nashville R. R. Co.*, 227 U. S. 88, 92."

Again, in *United States* v. *Chicago, M. St. P & P. R. Co.*, 294 U. S. 499 (1934), it was reaffirmed (p. 506) that:

> "A zone of reasonableness exists between maxima and minima within which a carrier is ordinarily free to adjust its charges for itself. *Texas & Pacific Ry. Co.* v. *United States*, 289 U. S. 627, 636; *United States* v. *Illinois Central R. Co.*, 263 U. S. 515, 522."

In *I. C. C.* v. *Columbus & Greenville Ry.*, 319 U. S. 551 (1942), Mr. Justice Douglas, in a concurring opinion, stated (p. 560):

> "The rule governing the right of carriers to initiate rates has not changed. *United States* v. *Chicago, M. & St. P. & P. R. Co.*, 294 U. S. 499, 506."

Certainly if there is any matter which is one of business policy it is the nomenclature to be applied to rates and the kinds or categories of rates to be published and charged. Because rates are called "class rates" does not give the Commission any special authority to deal with them. Nor is it a function of the Commission to take action designed to induce the charging of rates called "class rates" rather than of commodity or exception rates. This point is of importance here because of the emphasis placed by the Commission in its report (R. 698, 699) on the fact that in the South and West the rates actually charged on all but an infinitesimal portion of the freight are commodity or exception rates. Indeed the Commission seems influenced to its decision by a view that it will be desirable that more freight should be charged class rather than commodity or exception rates and that the class rates are unlawful because they are not more generally charged in the South and West.

But it is clear that rates can be unlawful under the Act only if they *are* charged, or are the rates to be charged if any freight should move. Mere "paper rates" are not unlawful, because the Act provides that it is the "charges made for any service rendered or to be rendered" which must be just and reasonable (Section 1(5)(a)).

Furthermore, since it is the function of the Commission only to enforce the provisions of the Interstate Commerce Act, it may not require rates to be changed because it differs with the business policy or economic theories of railroad management. It may not require rates to be changed for the purpose of bringing about a shift in the location of industry or of equalizing disadvantages of location in order to subsidize the establishment or development of industry at one place rather than another in accordance with its economic theories, however valid they may be. The Commission may require freight rates to be changed only upon a finding that the existing freight rates established and charged by the railroads violate one of the provisions of the Interstate Commerce Act, and it must make precise findings as to why and the respects in which the existing rates violate the statute.

In *United States* v. *Chicago, M., St. P. & P. R. Co.*, 294 U. S. 499 (1934), it was said (pp. 504-505):

> "This court has held that an order of the Interstate Commerce Commission is void unless supported by findings of the basic or quasi-jurisdictional facts conditioning its power. *Florida* v. *United States*, 282 U. S. 194, 215; *United States* v. *Baltimore & Ohio R. Co.*, 293 U. S. 454. 'In the absence of such findings, we are not called upon to examine the evidence in order to resolve opposing contentions as to what it shows or to spell out and state such conclusions of fact as it may permit.' *Florida* v. *United States*, *supra*."

Again in *Atchison Ry.* v. *United States*, 295 U. S. 193 (1934), it was said (pp. 201-202):

> "Its (the Commission's) report does not disclose the basic facts on which it made the challenged order. This court will not search the record to ascertain whether, by use of what there may be found, general and ambiguous statements in the report intended to serve as findings may by construction be

> given a meaning sufficiently definite and certain to constitute a valid basis for the order. In the absence of a finding of essential basic facts, the order cannot be sustained. *Florida* v. *United States*, 282 U. S. 194, 215. Recently this court has repelled the suggestion that lack of express finding by an administrative agency may be supplied by implication. *Panama Refining Co.* v. *Ryan*, 293 U. S. 388, 433. See *Beaumont, S. L. & W. Ry.* v. *United States*, 282 U. S. 74, 86. *Interstate Commerce Comm'n.* v. *Chicago, B. & Q. R. Co.*, 186 U. S. 320, 341."

In *United States* v. *Carolina Carriers Corp.*, 315 U. S. 475 (1941), the Court, after noting that the precise grounds of the Commission's determination were not clear, said (pp. 488-489):

> "* * * as in *Florida* v. *United States*, 282 U. S. 194, 215, the defect is not merely one of the absence of a 'suitable complete statement' of the reasons for the decision; it is the 'lack of the basic or essential findings required to support the Commission's order.' And see *United States* v. *Baltimore & Ohio R. Co.*, 293 U. S. 454, 464; *United States* v. *Chicago, M., St. P. & P. R. Co.*, 294 U. S. 499, 510-511. * ** An insistence upon the findings which Congress has made basic and essential to the Commission's action is no intrusion into the administrative domain."

Moreover, mere findings of the Commission that existing freight rates violate the statute will not sustain an order requiring the rates to be changed unless the findings are themselves supported by substantial evidence, and it is the province of the Court to examine the record and ascertain whether such is the fact.

The Supreme Court in *Int. Com. Comm.* v. *Louis & Nash. R. R.*, 227 U. S. 88 (1912), held (p. 91):

> "A finding without evidence is arbitrary and baseless. And if the Government's contention is correct, it would mean that the Commission had a power possessed by no other officer, administrative body, or

tribunal under our Government. It would mean that where rights depended upon facts, the Commission could disregard all rules of evidence, and capriciously make findings by administrative fiat. Such authority, however beneficently exercised in one case, could be injuriously exerted in another; is inconsistent with rational justice, and comes under the Constitution's condemnation of all arbitrary exercise of power.

"In the comparatively few cases in which such questions have arisen it has been distinctly recognized that administrative orders, quasi-judicial in character, are void if a hearing was denied; if that granted was inadequate or manifestly unfair; if the finding was contrary to the 'indisputable character of the evidence'."

In *United States* v. *Abilene & So. Ry. Co.,* 265 U. S. 274 (1923), the Court said:

> "* * * a finding without evidence is beyond the Commission's power."

In *Anchor Coal Co.* v. *United States,* 25 F. (2d) 462 (D. C., S. D. West Virginia 1928), it was stated (p. 464):

> "To understand, however, exactly what the power is which the Commission has assumed to exercise, it is necessary that we go behind its merely formal conclusions that rates are reasonable or unreasonable, and ascertain exactly what it is that it has done, and upon what facts and upon the application of what principles it has arrived at its conclusions. This is our duty to do. *Southern Pacific Co.* v. *Interstate Commerce Commission,* 219 U. S. 433, 31 S. Ct. 288, 55 L. Ed. 283; *U. S.* v. *N. Y. Central Railroad,* 263 U. S. 603, 44 S. Ct. 212, 68 L. Ed. 470."

In *Colorado Interstate Gas Co.* v. *Federal Power Com'n,* 142 F. (2d) 943 (C. C. A., Tenth Circuit, 1944) it was held (p. 954):

> "* * * the right of the Commission to make a finding of unreasonableness depends upon the existence of the fact. In the absence of substantial evidence to show

> that the rates and charges in existence are unreasonable, a finding to that effect constitutes the arbitrary exercise of power by administrative fiat and cannot stand. *Interstate Commerce Commission* v. *Louisville & N. R. Co.*, 227 U. S. 88, 33 S. Ct. 185, 57 L. Ed. 431."

In *Florida* v. *United States*, 282 U. S. 194 (1930) this Court stated (p. 215):

> "The question is not merely one of the absence of elaboration or of a suitably complete statement of the grounds of the Commission's determination, to the importance of which this Court has recently adverted (*The Beaumont, Sour Lake & Western Railway Company* v. *United States, ante,* p. 74), but of the lack of the basic or essential findings required to support the Commission's order. In the absence of such findings, we are not called upon to examine the evidence in order to resolve opposing contentions as to what it shows or to spell out and state such conclusions of fact as it may permit. The Commission is the fact-finding body and *the Court examines the evidence not to make findings for the Commission but to ascertain whether its findings are properly supported.*" (Italics added.)

Finally, since the Commission is authorized to change rates only if it finds existing rates unlawful and only when it makes such a finding after hearing, it necessarily follows that its determination must be based upon the evidence presented to it at the hearing and not upon its own independently held economic ideas as to what is sound or desirable. *Southern Pac. Co.* v. *Interstate Commerce Commission*, 219 U. S. 433, 444; *Anchor Coal Co.* v. *United States*, 25 F. (2d) 462, 472.

The application here of these basic principles and of the limitations which they impose upon the Commission's functions and action will become apparent with the more detailed analysis of the facts and the issues which will follow.

B. Plan of this argument in the light of the nature of the issues.

The appellant States are naturally primarily concerned with so much of the Commission's order as would require a 10 per cent increase in the class rates of the railroads for transportation within Official territory in which appellant States are comprised. This is so for several reasons.

In the first place, the evidence before the Commission showed that there is a very substantial volume of the total transportation within Official territory upon which the carriers charge class rates which would be increased under the Commission's orders. The Commission found in accordance with its Exhibit No. 228 (R. 11834), which was based on a study of all carload traffic moving on September 23, 1942, that 5.8 percent of all carload traffic within Official territory was charged the class rates. It is this substantial portion of the very large volume of carload traffic within Official territory upon which shippers and receivers would be required by the Commission's order to pay freight charges 10 percent higher than those in effect at the time the order was made. It is estimated that these increased charges would certainly amount to at least $15,000,000 per annum (R. 574).

In the second place, a 10 percent reduction in the class rates for transportation within Southern and Western territories and from those territories to Official territory can be of little benefit to those territories as compared with the great burden which the portion of the orders requiring a 10 percent increase in the class rates within Official territory would place upon shippers and receivers in Official territory. This is because of the further fact disclosed by Exhibit 228, previously referred to, that the railroads have provided commodity or exception rates for 98.2 percent of the carload traffic transported within Southern territory and 99.4 percent of the total carload traffic transported within Western Trunk Line territory, so that it is only an infinitesimal portion upon which the railroads demand class rates which would be reduced under the Commission's orders.

It follows that from the standpoint of real interest to the parties, other than the Western railroads, the principal issue in this case is whether that portion of the Commission's orders requiring a 10 percent increase in the class rates for transportation between points in Official territory is valid.

The answer to this question requires, first, examination of the law as to what must be found and proved to sustain an ultimate determination that rates are unreasonably low in violation of Section 1 of the Interstate Commerce Act or that they result in undue and unreasonable preference in violation of Section 3. It next requires examination of the findings and the evidence in the present case to ascertain whether the Commission has found and whether the record justifies such essential findings of facts. Appellants will direct the two first points of their argument to the discussion of these underlying questions.

If, as appellants contend, neither the findings of the Commission nor the evidence satisfy the requirements previously held necessary to sustain an ultimate determination that rates are unreasonably low in violation of Section 1 or that they produce undue preference and prejudice in violation of Section 3, it will remain to consider in the third point whether the amendments of 1940, as the Commission appears to have held, changed the law and the requirements for determinations of violations of Sections 1 and 3, or whether for some other reasons, rates prescribed by the Commission and long in effect are now unlawful because not on a uniform level.

Then examination will be made as to whether the findings of the Commission and the factual considerations relied upon are sufficient to sustain the orders requiring an increase in class rates within Official territory under the law as so changed.

Finally, it will be necessary to consider whether, since the Commission's findings and orders were predicated in very large part upon evidence as to conditions in 1939 and the early war years, the Court is not called upon to take notice and hold that conditions have so changed since that time as to render the Commission's orders now anachronistic and unenforceable.

C. Some important factual considerations

As a background for the consideration of the questions just outlined, there are certain important facts to be considered which have a direct bearing upon the determination of the issues which are here to be decided. Some of these facts will have to be restated later in the argument herein but since they have such general bearing upon all of the issues to be decided, a brief reference to them at this point appears appropriate.

(1) As previously stated, the Commission's order would require a 10 percent increase in the freight rates actually charged upon a very substantial portion of the large volume of freight transported between points within Official territory. It is estimated that this phase of the orders would impose an added cost for transportation and therefore of doing business in the appellant States amounting to at least $15,000,000 per year (R. 574).

(2) Although the professed purpose of the Commission is to bring about uniformity of freight charges and remove what it believes to be undue prejudice and preference as between the several rate territories, nevertheless in contrast with the very substantial proportion of the total traffic upon which class rates are actually charged in Official territory, which rates would be increased 10 percent by the Commission's orders, there is only a negligible amount of freight upon which the class rates are charged for transpor-

tation in Southern and Western territories, because the railroads have provided commodity or exception rates for transportation within those territories which, being lower, have superseded the class rates (R. 179, p. 564).

(3) No shipper or receiver in any territory claimed that the class rates for transportation between points in Official territory were too low. Instead, the Southern and Western spokesmen generally sought uniformity on the Official territory level.

(4) Class rates for transportation within Official territory which the Commission now finds to be less than minimum reasonable rates were prescribed by the Commission itself not long ago as maximum reasonable rates. *Eastern Class Rate Investigation,* 164 I. C. C. 314 (1930), 171 I. C. C. 481, 177 I. C. C. 156, 203 I. C. C. 357 (1934). The Commission's orders, therefore, would assume that the class rates have traversed the "zone of reasonableness" from the maximum level for which they were prescribed by the Commission in the *Eastern Class Rate Investigation* to 10 percent less than the minimum reasonable level at the present time. However, the Commission has made no findings as to any facts nor is there evidence in the record to support findings as to changes in transportation conditions since these rates were so prescribed which would now render them less than minimum reasonable rates. The only change is the Commission's adoption of a new policy* that class rates should be uniform throughout the country and should not be made in the light of the conditions, the traffic and the rate structures of each territory.

(5) As shown by the statements from its reports quoted earlier herein, the Commission itself has recognized, in prescribing the class rates which its orders herein would

---

*cf. *United States* v. *Seatrain Lines, Inc.*, decided January 7, 1947.

change, that it did so in contemplation of the very different factors influencing the levels of the different sorts of freight rates in the several rate territories.

Thus the Commission's report in the *Eastern Class-Rate Investigation*, 164 I. C. C. 314, sets forth the considerations which have produced the class rates within Official territory. An examination of this report will indicate that the rates were influenced by such factors as the competition of the Erie and New York State barge canals; the large volume of passenger traffic of the principal railroads; the large volume of freight traffic and the important proportions thereof, consisting of manufactured articles and of products of mines; the harmonizing of the rates prescribed with the rates previously in existence; the preservation of the revenues of the railroads; the nature of the rate structure in the territory, including the relatively high commodity rates on heavy low-grade articles, and the very large proportion of freight traffic moving at class rates. At page 391 of its report in the *Eastern Class-Rate* case, the Commission said:

> "Class rates in official territory differ materially from those in other sections of the country. They are much lower in level, with the exception of certain rates in western trunk-line territory which approach them in level. They also apply, generally speaking, to a much wider range of traffic. *In the other territories class rates*, at least in the past, *appear to have been of particular interest to jobbers, and the traffic which they move seems to have been, and perhaps still is, predominantly less than carload. For carload traffic of any important volume commodity rates have generally been provided. This is not the situation in official territory, where a great deal of very important carload traffic moves on class rates.* Of the traffic embraced by the revenue test about 68 per cent was carload. Among the commodities which generally move in carloads on class rates in official territory but are given commodity rates in other territories are fruits and vegetables (including apples, cabbage, and pota-

> toes), dairy products; vegetable oils, furniture, wrapping paper, soap, sash, doors, and blinds.
>
> "A corollary of this situation is that, *as compared with the class rates, the commodity rates on heavy, low-grade articles in official territory are often relatively high and in the other territories relatively low.* While it is difficult to determine the fact with exactness, it is quite clear from general knowledge, and also from evidence here of record, that *the spread between the class rates in official territory and those in effect in the South and West is not an accurate index of the differences in general average rate levels,* the latter differences being relatively considerably less." (Italics added.)

With regard to the interterritorial class rates generally, the Commission said:

> "Interterritorial rates usually represent a blend of, or lamination derived from, the rate levels within the territories or zones concerned" (p. 476).

(6) Of equal importance, especially in view of the role which its new policy of so-called uniformity apparently has played in the Commission's determination and orders herein, is the fact that uniformity of class rates is by no means the equivalent of uniformity of transportation rates and charges.

It is not to be ignored, especially since it played an important part in the legislative background of the present litigation, that there has been a widespread campaign to create the impression in the minds of the public that the South has been subjected to much higher freight rates than are charged to shippers and industry in the North and that thereby the South has been kept in a state of "economic bondage" to the North. The evidence here and the Commission's findings make it clear that such an impression is erroneous when freight rates as a whole are considered.

Thus the Commission finds that the Southern level of all freight revenue is only 3.9 percent above that for Official territory (p. 606, R. 221).

Again, the Commission at pages 666 through 669 of its report in this proceeding (R. 281-284) cites examples which are "illustrative" of the situation that in some instances "commodity rates within the southwest or from or to the southwest are lower than on like traffic for equal distances within official territory." Similarly, on page 593 of the report (R. 208) the Commission finds that "in many instances, commodity rates in the south are lower than commodity rates on like traffic in official territory." There follow seven pages of examples of commodity rates, to a large extent on raw materials or low-grade freight, which were either voluntarily established by the railroads or prescribed by the Commission itself which are on a lower level for transportation within the South than the rates for the transportation of the same commodities within Official territory. This is so as to logs (R. 211), lumber (R. 212), pig iron (R. 212), sand, gravel, crushed stone, and slag (R. 213), as well as other commodities.

It was testified by Witness Bell, a former traffic official of the Southern Railway, that these low rates for the transportation of raw materials in the South had been a result of the rate-making policy of the Southern railroads and orders of the Southern State authorities to induce the use of raw materials within the South (R. 3626-3630).

As the Commission said in the *Eastern Class-Rate Case*, page 391, a corollary of the differences in the class rate levels "is that, as compared with the class rates, the commodity rates on heavy, low-grade articles in official territory are often relatively high and in the other territories relatively low * * *. The spread between the class rates in official territory and those in effect in the south and west is not an accurate index of the differences in the general average rate levels * * *."

(7) In addition to the foregoing consideration is the further fact that even freight which moves at class rates in both Official territory and the South often enjoys a lower classification rating in the South so that despite the fact that the first class rates for transportation within the South are higher than the first class rates for transportation for similar distances in Official territory, the class rates actually charged upon the same freight are frequently lower in the South than in Official territory. At page 567 of its report (R. 182) the Commission found that "in making any comparisons of the levels of the class rates within the respective territories or zones, we are confronted with the fact that differences in the applicable classifications affect the levels of the rates as much as or more, in some instances, than the differences in the levels of the class rate scales."

(8) Finally, as a background for the consideration of the validity of the orders requiring an increase in the class rates in Official territory, it is important to inquire what must be the real reason why the Commission, having determined that the class rates should be brought to approximate uniformity or to a closer proximation to uniformity, decided that this should be achieved by an increase in the class rates within Official territory as well as by a reduction in class rates for transportation in the South and West and from those territories to Official territory.

The only expression of any reason to be found in the Commission's report is its statement on page 705 (R. 320) that its finding that the present class rates in Official territory should be increased 10 percent "is based in part upon a consideration of the returns from operation of the various respondents in the several territories as reported to us, which we have considered pursuant to stipulations of record. From those returns and the whole record we find and determine that the revenue needs of the carriers in Official territory with respect to their class rate traffic are greater than is the case as to the class rate traffic of the carriers in the other territories described.'' The soundness of this statement and its validity as a basis for the Commission's ultimate conclusion and orders will be discussed more fully presently. At this point, however, it is sufficient to suggest simply that it hardly affords a substantial basis for a minimum rate order requiring an increase in upwards of $15,000,000 annually in the freight charges paid by shippers and receivers in Official territory. It is true that the figures of average rate of return upon property investment of the railroads in Official territory was somewhat lower than that for the railroads in other territories, but the statistics also show that this was the situation at the time the class rates were prescribed as maximum reasonable rates. Moreover, there was no finding and no evidence that the difference in rates of return is due to the difference in class rates or that an increase in class rates would increase the rate of return of the Official territory lines relative to that of the railroads in the South or in the West. It is apparent, therefore, that this statement is designed to conceal rather than to present the real reason for the Commission's action.

The real reason is clearly apparent in the evidence (Ex. 16, R. 6186; Ex. 195, R. 11271, 11272) and the Commission's reference thereto in its report (pp. 607-608; R. 222, 223) that to accomplish uniformity in class rates without increasing the rates within Official territory, namely, by reducing the rates in the South to the Official territory level, would involve a revenue loss to the Southern railroads of $23,499,831 per year based upon traffic handled in 1939 (R. 11271, 11272). It is obvious that the Southern railroads could not afford such a revenue reduction.

It follows, therefore, that the Commission's orders requiring a 10 per cent increase in class rates within Official territory would require shippers and receivers in that territory to pay increased freight charges not because their present rates afford inadequate compensation to the Official territory railroads for the transportation of class rate freight, but in order to protect the revenues of the railroads in the South transporting freight for others. As will be argued presently, it is submitted that a minimum rate order requiring an increase in freight rates with this purpose or result is plainly beyond the power of the Commission.

With this preliminary survey of a few basic features of the rate situation and the action of the Commission, we turn to an examination of the law and the facts to ascertain whether the orders requiring a 10 per cent increase in class rates within Official territory can be sustained as a valid exercise of the Commission's rate power.

POINT I

The orders of the Commission requiring a 10 per cent increase in class rates for transportation within official territory are invalid as an attempted exercise by the Commission of authority to prescribe minimum reasonable rates, and its ultimate determination that the then existing class rates previously prescribed by the Commission as maximum reasonable rates were less than minimum reasonable rates in violation of Section 1, paragraphs (4) and (5) (a) of the Interstate Commerce Act was arbitrary and invalid because not supported by essential preliminary findings and because without support of substantial evidence.

A. The Law

The decisions of the courts and of the Commission itself, since Congress gave the Commission authority under certain circumstances to prescribe minimum rates and to order existing rates to be increased, clearly lay down the conditions which must exist to support a determination that rates violate Section 1 (4) and (5) by being too low, and the findings of facts which are essential to the issuance by the

Commission of a minimum rate order requiring that rates be increased.

Although the Interstate Commerce Act was first enacted in 1887, Congress did not confer upon the Commission the power to prescribe the minimum rates to be charged by carriers or to require them to increase their charges to the shipping public until 1920. The discussions of the subject leave no doubt that the power to set minimum limits to the freight rates to be paid by shippers was regarded as such a drastic power, whose exercise might so seriously affect the economic life of the country and the welfare of its citizens and communities, that there was hesitancy to confer such authority upon an administrative government agency. Finally in 1920 the law was amended to confer upon the Commission the power to prescribe minimum as well as maximum rates. Then for the first time could the Commission find a rate to be unreasonable in violation of Section 1(4) and (5)(a) because too low. However, it has still been consistently recognized that so far reaching may be this power that it should be exercised sparingly and with extreme caution and that a rate should be condemned under Section 1 as too low and a higher rate prescribed only on the basis of convincing proof that such action is necessary to prevent most serious consequences, partaking of the nature of an emergency, jeopardizing the transportation system or threatening imposition of a financial burden upon other traffic than that directly affected.

This is made clear by the expressions of the courts outlining the considerations which led to the amendment of the Act to give the Commission authority to order rates increased and stressing the changed objective of the legislation from the protection of shippers against exorbitant charges to the preservation of the financial capacity of the carriers to provide service. *Jefferson Island Salt Mining Co.* v. *United States*, 6 F. (2d) 315; *Scandrett* v. *United States*, 32 Fed. Supp. 995, affd. 312 U.S. 661; *Anchor Coal Co.* v. *United States*, 25 F. (2d) 462.

Consistently with this altered objective of the Act, the decisions of this Court and of the Commission have clearly indicated that the minimum rate power should be exercised only when the facts found indicate a threat to this objective.

Thus in *Texas & Pacific Ry. Co.* v. *United States*, 289 U. S. 627 (1933), the Court said (p. 633):

> "The evidence failed to show that the rates of the Texas & Pacific and the L. R. & N. on export and import shipments to and from New Orleans were not compensatory. The Commission refused to find that they were so low as to cast a burden on other traffic. There was therefore no basis for an order fixing minimum reasonable rates under § 15(1) of the Act."

In a recent report of the Commission, *New Automobiles in Interstate Commerce*, 259 I. C. C. 475, the Commission reviewed quite fully the subject of the minimum rate power conferred upon it by the Transportation Act, 1920 and the circumstances under which that power may be exercised. It said, in part (pp. 534-535):

> "The power to prescribe reasonable minimum rates was first conferred upon us in the Transportation Act of 1920, mainly to prevent destructive competition and enable us to carry out the mandate in section 15 (a) of the same act, so that the carriers might 'earn an aggregate annual net railway operating income equal, as nearly as may be, to a fair return upon the aggregate value of the railway property of such carriers held for and used in the service of transportation.' In *Salt Cases of 1923*, 92 I. C. C. 388, we said, at page 410:
>
> "If the minimum rate-making power were intended by Congress to be used only in cases where the rate assailed had been proven with arithmetical exactitude to be less than the cost of service, the grant of that power would be ineffectual, because such a test of exact cost of service is impracticable of application to specific rates on a single commodity, and this has been recognized by the Supreme Court of the United States.

> "The act prescribes no different tests or standards for the determination of just and reasonable minimum rates than for just and reasonable maximum rates. And there is nothing in the act which either directs or implies that we should use tests of different general character in the determination of reasonable minimum rates than those which we have consistently and uniformly applied for many years, with the tacit consent and sanction of the Congress and the express approval of the Courts, in fixing maximum reasonable rates.

"Our order in that proceeding was sustained in *Jefferson Island Salt Mining Co.* v. *United States*, 6 Fed. (2d) 315.

"In *Lake Cargo Coal*, 139 I. C. C. 367, proposed reduced rates that would have disturbed the rate adjustment were found not justified. We discussed our minimum-rate power and referred to court decisions holding that authority to exercise such power was not confined to situations where the rates were below a compensatory level. Although our order therein was set aside, *Anchor Coal Co.* v. *United States*, 25 Fed. (2d) 462, the court upheld our right to prescribe minimum rates 'to prevent ruinous rate wars and to guarantee reasonable earnings, not only to the carriers affected, but also to competing carriers, who may labor under higher costs of doing business.' The Supreme Court reversed the lower court, on other grounds, but what was said by the lower court later came to be regarded as settled law.

"The minimum-rate power has always been exercised sparingly. See *Inland Empire Paper Co.* v. *Great Northern Ry Co. Co.*, 219 I. C. C. 501, 510. In *Petroleum and Petroleum Products, Calif. to Ariz.*, 241 I. C. C. 21, 41, we said:

> "Our power to fix minimum rail rates is granted by section 15 (1) of the Interstate Commerce Act. By the terms of that section, its exercise is to be limited to instances where after full hearing we shall be of the opinion that a rate or charge is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of such act. This power has been used sparingly. Generally its application has been confined to instances in which we have found that a rate was so low as needlessly to sacrifice a carrier's revenue."

In no case will any suggestion be found that the Commission is authorized to condemn a rate as unreasonably low in violation of Section 1 or to exercise its minimum rate power to require an increase in rates for the purpose of effecting or stimulating a change in the industrial or economic map of the country, for the purpose of equalizing business fortunes and conditions, or for the purpose of enforcing the ideas of the Commission as to what would be a more orderly and logical rate structure.

Examination of the Commission's reports here will show a complete absence of any findings of facts or conditions such as those described in the foregoing citations. And a review of the record will demonstrate that there is no evidence which would support such findings with regard to the class rates for transportation within Official territory.

B. There is no finding and no evidence to support a finding that the class rates for transportation between points in Official territory are* not fully compensatory. Indeed both the evidence and the Commission's findings require the conclusion that the class rates which the Commission ordered increased 10 per cent were already highly profitable.

The action of the Commission in adding, by its supplemental report, an additional finding that the inter-territorial class rates within Official and Illinois territories are less than just and reasonable rates and are and for the future will be unjust and unreasonable in violation of Section 1(4) and (5) (a) of the Act (R. 477) does not bolster the Commission's orders. It is the findings of underlying facts essential to support such an ultimate finding which are wholly lacking and these are not supplied by the supplemental report, nor could they be because there was no evidence to sustain them.

---

* It must be understood that in all of this discussion until the last point in this brief, the factual matters stated, although the present tense may be used, are as they are disclosed by the record and the Commission's findings in the *Class Rate Investigation*. Since the Commission's decision and orders therein, the railroads have sought and have been granted general increases in all of their freight rates on the ground that their added costs since January 1, 1946 have made the former rates inadequate, *Increased Railway Rates, Fares and Charges, 1946.*. It will be urged in the last point that this drastic change in conditions and in the rate situation has rendered the orders involved in this action inoperative and so obsolete that they should be permanently set aside. But the purpose of this note is to make it clear that except in the last point appellants are here speaking in terms of the record and not of actual conditions at the present time.

The Official territory railroads made no complaint and offered no proof that their class rates were too low. When, after the Commission's orders and its denial of further reconsideration, they filed tariff schedules to increase their rates, they did so not voluntarily but only under the compulsion of the orders, and as soon as the enforcement of those orders was enjoined they cancelled the tariffs. Certainly railroad management could be expected to be the first to seek adequate compensation for the service of their companies.

The record will be searched in vain for a suggestion by anyone that the class rates for the transportation of carload freight within Official territory were not fully and highly compensatory to the railroads in Official territory.

It was urged by certain trucking interests who sought to have the railroads increase their rates for freight in less-than-carload lots in order that they might advance their own charges, that the less-than-carload rates of the railroads were not fully compensatory. And there are some statements in the Commission's reports pointing in this direction. But the small volume of less-than-carload freight is of minor importance in comparison with the great tonnage of freight in carloads.

So far as the large volume of carload traffic is concerned, there is not a word in the Commission's reports which can be construed as a finding that the class rates which the Commission ordered increased 10 per cent were not already fully and highly compensatory to the railroads for their services. Not only is there no finding but there is no evidence whatever that the existing class rates in Official territory are not fully compensatory. On the contrary, as Commissioner Porter says, "the cost study (made by the Commission's staff, upon which the majority so heavily relied) indicates that carload traffic in the East is being handled at a profit" (p. 719; R. 334).

The cost study referred to was a study, or rather a series of exhibits prepared by the Commission's staff for the purpose of arriving at a means of ascertaining the average expense to the railroads of transporting in each territory a given quantity of freight for a given distance and loaded in a particular type of railroad car. These so-called studies were prepared under the direction of Dr. Edwards of the Commission's staff and he testified regarding them at the hearings. His testimony will be referred to more particularly hereafter.

The virtues and vices of these cost computations as the basis of any conclusion concerning the need or justification for a uniform level of class rates throughout the country will be discussed in a later point. At the present time, however, accepting these cost studies at their face value, they indicate most emphatically that the class rates in effect for transportation of freight within Official territory at the time the Commission made its orders afforded more than reasonable compensation to the railroads for the transportation of such freight.

The majority find that from the standpoint of volume of freight the fifth class rating is the most important in Official territory. Elsewhere the Commission remarks that a 300-mile haul may be taken as fairly representative. A chart included in Dr. Edwards' Exhibit 13 shows that his computed cost of transporting a 20-ton load (which would certainly be a reasonable average loading for fifth class freight) in a box car for a haul of 300 miles would be about 18 cents per 100 pounds, this being what Dr. Edwards refers to as "total distributed expense", which includes "a fair return" upon the carrier's property. As compared with this figure, the present fifth class rate for 300 miles is 34 cents per 100 pounds, or nearly twice the cost, including a fair ~~return~~.

Certainly there can be no justification whatever for finding that a rate almost twice the cost, including a fair return, is unlawful in violation of Section 1 because it is less than a minimum reasonable rate. Nor can there be justification for prescribing as a minimum reasonable rate for such a haul a figure of 10 per cent in excess of the present highly profitable rate.

Again, Table 3 of Dr. Edwards' Exhibit 12, shows a figure of 16 cents per 100 pounds as the full distributed cost, including a four per cent return, of transporting 25 tons of freight in a box car 300 miles in Official territory, exclusive of New England and of the Pocahontas lines. Appendix P of the same exhibit shows that the lowest class rate (sixth class) under the Official territory scale for this distance is 27 cents. The fifth class rate is 34 cents and the first class rate is 96 cents, or six times the computed cost, including a fair return on investment. Such a rate simply cannot be less than a minimum reasonable rate permitted by Section 1(4) and (5)(a), or else the Act has a meaning contrary to all ordinary ideas of language. Even if only five tons are loaded in a car, Table 3 shows a computed cost of 48.4 cents per 100 pounds. There is little, if any, freight with such a light loading for which the class rate is less than third class. Appendix P shows that the third class rate for 300 miles is 67 cents.

In the case of the Pocahontas lines, which are in Official territory and would be required to increase their class rates 10 per cent, the present class rates are even more profitable, judged by a comparison of the rates with Dr. Edwards' computations of average costs of transportation. Here the average cost of transporting 25 tons of freight in a box car 300 miles is only 10.8 cents as compared with a present sixth class rate of 26 cents, a fifth class rate of 34 cents and a fourth class rate of 48 cents. With only five tons of freight in a car the cost is shown as 36.3 cents compared with first, second and third class rates of 96, 82 and 67 cents, respectively.

Further proof that the class rates applicable to carload traffic are not only highly profitable but provide a greater margin of profit than any other rates is contained in statistics set forth in the Commission's reports.

It will be noted from the table on page 611 (R. 226) of the Commission's report that in the Eastern district "Group V: Manufactures and Miscellaneous", although constituting a lesser proportion of the total carload traffic transported in that territory than "Group III: Products of Mines", produced 41.41 per cent of the total freight revenues in the Eastern district, which is greater than the amount of revenue produced by any other commodity group. It is the commodities included in Group V that constitute the great prepondence of the carload traffic moving on class rates in the East. In this connection a further table appearing on page 612 of the Commission's report is of interest. This table shows the relative extent to which the different commodity groups contribute revenues in excess of out-of-pocket costs. It will be observed that in the Eastern district Group V, consisting of "Manufactures and Miscellaneous" freight, although constituting only 29.57 per cent of the total tonnage in that district, contributed 53.5 per cent of the total revenues in excess of the out-of-pocket costs, which is a greater contribution than made by any commodity group, including "Products of Mines."

Since, as found by the Commission, the railroads as a whole in Official territory have operated at a profit there can be no question that the class rates applicable to the movement of carload traffic in Official territory are very profitable and that they do not throw a burden upon other traffic.

With regard to less-carload shipments statistics included in the Commission's report (p. 611, R. 226) show that in 1939 they constituted only 1.61 percent of the total tonnage of the railroads in Official territory and produced only 7.06 percent of their total revenue from carload and less-than-carload traffic combined. In the South less-than-carload traffic was only 2.75 percent of the total traffic and yielded 11 percent of the total revenue, while in the West the corresponding figures are 1.5 percent and 6.77 percent respectively. Moreover, not all less-than-carload traffic moves on class rates (p. 569, R. 184).

It is therefore apparent that even if there were findings and evidence to support such findings that the class rates in Official territory are less than compensatory for the transportation of less-carload traffic, this would not warrant an order requiring an increase in all class rates, including the class rates on the very large volume of carload traffic for which, as just shown, the class rates are highly compensatory.

However, any suggestion that even the less-than-carload rates fell so far short of providing adequate compensation to the railroads as to justify a minimum rate order requiring that they be increased is answered in the first place by the Commission's action with respect to the class rates in Western Trunk Line territory. The Commission found (p. 585, R. 200) that based upon 1939 statistics the losses incurred by the carriers in the West in the handling of less-than-carload traffic were relatively and actually much greater than any losses incurred by the carriers in Official territory (p. 585, R. 200). Nevertheless it ordered the class rates in Western territory *reduced* 10 percent. This is obviously inconsistent with the requirement that the class rates in Official territory be increased 10 percent, if predicated upon any idea of the non-compensatory character of the less-than-carload rates.

Moreover, Dr. Edwards' cost computation (Exhibit 13, R. 5917) shows that for a loading of only 6.5 tons of less-than-carload freight per car the first, second and third class rates in Official territory, which are probably the most commonly used for less-carload freight, exceed out-of-pocket cost plus solely related expenses.

C. There is no finding and no evidence to support a finding that the level of the class rates for transportation within Official territory threatens a rate war or otherwise will tend to impair the financial integrity of the carriers.

The Commission does not suggest nor is there the slightest indication of any evidence that the fact that the class rates for transportation within Official territory are upon a lower level than those of the class rates in Southern and Western territories threatens a rate war or a competitive reduction in rates, which will impair the financial ability of the railroads to render adequate service to the public.

When it is borne in mind that the present class rates were prescribed by the Commission itself as maximum reasonable rates, it is obvious that a finding that they now are so low as to invite a rate war would be absurd. These rates have been in effect since the Commission's decision in the *Eastern Class Rate Case* for a period of over ten years and it is to be assumed that both carriers and shippers have become adjusted thereto.

D. The Commission's finding predicated upon the returns from Operations of the Carriers in the several territories, that "the revenue needs of the carriers in official territory with respect to their class-rate traffic are greater than is the case as to the class-rate traffic of the carriers in the other territories" is not a finding that the class rates for transportation in Official territory are non-compensatory, sufficient to sustain a minimum rate order requiring an increase in those rates

At page 705 (R. 320) of its original report, after stating its determination that the class rates in Official territory should be increased 10 percent, the Commission said further:

> "This finding as to the justness and reasonableness of the intraterritorial official class rates is based in part upon a consideration of the returns from operation of the various respondents in the several territories as reported to us, which we have considered pursuant to stipulations of record. From those returns and the whole record we find and determine that the revenue needs of the carriers in official territory with respect to their class-rate traffic are greater than is the case as to the class-rate traffic of the carriers in the other territories described."

At page 613 (R. 228) of its report the Commission stated that the rate of return of the railroads in the Southern region generally had been a little higher than that of the Eastern district railroads during the six-year period 1936-41 and during the seven-year period 1936-42. Quite different figures of rates of return for the carriers in the Eastern district for the years 1939-41 are set forth in a table on page 657 in the Commission's original report (R. 272). The rates of return for the Eastern district railroads in each of the last three years shown were higher than corresponding figures for the railroads of the Western district, which hardly lends support for the finding of the Commission previously quoted.

However, whatever may be the relative figures as to rates of return on property investment, it is submitted that they afford no indication as to the profitableness or the opposite of the class rates. The rates of return are composites of earnings on all traffic and considering the percentages of freight upon which the class rates are charged, it is difficult to see how a comparison of the rates of return for the entire freight business of the railroads affords any indication that the class rates alone do not contribute adequately to the total of the carriers' revenues.

There is not a scintilla of evidence showing that the revenues of the carriers in Official territory from their class rates are not sufficient to enable them to provide adequate and efficient service. On the contrary, the evidence establishes, as has been shown above, that the class rates are highly profitable and they are the highest rates charged in Official territory.

Neither is there a preliminary finding or evidence that would support the view that an increase in the class rates would produce increased revenues. Indeed as to "the effect of rates on the movement of traffic" the Commission's own findings indicate that an increase in the class rates may well discourage their use and drive the carriers to establish exception and commodity rates.

In such circumstances this Court has held invalid orders of the Commission requiring increases in rates for the purported purpose of increasing revenues. In *United States v. Chicago, M. St. P. & P. R. Co.,* 294 U. S. 499 (1934), which involved the validity of an order of the Commission requiring the respondent carriers to cancel reduced interstate rates on coal on the ground that such rates would cause a depletion of the carriers' revenues in violation of Section 15a(2), the Court held that the Commission's ultimate finding was invalid because it was not supported by an appropriate finding of fact that the carriers' revenues actually would be depleted thereby. Citing as authority its decisions in *Florida* v. *United States,* 282 U. S. 194 and 292 U. S. 1, the Court said at pages 507 and 508:

> "There is not a fact to indicate that the rates so reduced will be less than compensatory or that capacity for service to the public will be impaired or put in jeopardy. '*The raising of rates does not necessarily increase revenue. It may in particular localities reduce revenue instead of increasing it, by discouraging patronage.*' *Florida* v. *United States, supra,* at p. 214. As applied to the Indiana groups, the broad conclusions of the report, when related to the supporting findings, amount to this and nothing more, that the new schedule for Milwaukee is likely to be followed by new schedules maintaining the same ratio for other lines in Indiana. Even if the outcome for those lines is a diminution of the profits (the return being none the less compensatory), this without more does not make it wrongful for Milwaukee to restore the long standing parity between Brazil and Springfield. At the very least the findings should inform us, if only approximately, of the extent of the expected loss; they should make it clear whether the impairment of revenues will be trivial or substantial, for only thus can the impairment be related to capacity for service. Cf. *Florida* v. *United States,* 292 U. S. 1, 9. Nothing of the kind is shown." (Italics added.)

In *Florida* v. *United States,* 292 U. S. 1, the Court, discussed its prior decision in 282 U. S. 194, in which it had set aside an order of the Commission requiring an increase in intrastate rates because the Commission had failed to make requisite findings that the increases would satisfy the mandate of Section 15a that they increase the carrier's revenue. The Court said at page 8:

> "* * * in considering the authority of the Commission to enter the state field and to change a scale of intrastate rates in the interest of the carrier's revenue, the question was that of the relation of rates to income. But *to support the order then under review, the Commission had made no findings* as to the revenue which had been derived by the carrier from the traffic in

> question, or which could reasonably be expected under the increased rates, or *that the alteration of the intrastate rates would produce, or was likely to produce, additional income necessary to prevent an undue burden upon the carrier's interstate revenues and to maintain an adequate transportation service. Florida* v. *United States, supra*" (282 U. S. pp. 212, 214, 215, 75 L. ed. 302, 303, 304, 51 S. Ct. 119). (Italics added.)

Again in *North Carolina* v. *United States,* 325 U. S. 507, the Court said at page 516:

> "The Commission made no findings as to what contribution from intrastate traffic would constitute a fair proportion of the railroad's total income. It made no finding as to what amount of revenue was required to enable these railroads to operate efficiently. Instead, it relied on the mere existence of a disparity between what it said was a reasonable interstate rate and the intrastate rate fixed by North Carolina."

Certainly, the statement of the Commission regarding comparative rates of return cannot be held to satisfy the requirements recognized in the foregoing cases for a finding that the class rates for transportation in Official territory are not fully compensatory.

It is submitted, therefore, that there is absolutely no foundation in essential findings or in the evidence for a decision by the Commission that the class rates for transportation within Official territory, prescribed by the Commission as maximum reasonable rates, to which carriers and industries have become adjusted over several years, are now less than minimum reasonable rates in violation of Section 1(4) and (5) or for an order, in exercise of the Commission's minimum rate power, requiring a 10 per cent increase in those rates.

POINT II

To the extent that the orders purport to rest upon a determination that the present class rates create undue prejudice and preference in violation of Section 3 (1) of the Interstate Commerce Act, the orders are arbitrary and invalid because not supported by essential preliminary findings and because without support of substantial evidence. The court below erred in not so deciding.

The foregoing point has dealt with the lack of essential findings and of evidence to support the Commission's decision that the class rates in Official territory are less than minimum reasonable rates in violation of Section 1(4) (5)(a) because less than the class rates in the South and West, and that the latter are in excess of maximum reasonable rates in violation of the same sections because higher than the class rates in Official territory. The Commission rests its orders requiring an increase in the rates in Official territory also upon an ultimate finding that the relation between the interterritorial class rates applicable to transportation from Southern, Southwestern, and Western Trunk Line territories to Official and Illinois territories, on the one hand, and the intraterritorial class rates applicable within Official and Illinois territories, on the other hand, causes undue and unreasonable preference and advantage

> "to official and Illinois territories as a whole and the shippers and receivers of freight located therein, and subjects * * * southern, southwestern, and western trunk-line territories as a whole and the shippers and receivers of freight located therein to undue and unreasonable prejudice and disadvantage, in violation of section 3(1) of the act." (Ultimate Finding 3, p. 701, R. 316.)

It is submitted that this ultimate finding is arbitrary and invalid because without support in essential preliminary findings of fact, because there is no evidence of record to support necessary preliminary findings of fact, and because the ultimate finding proceeds from an erroneous view of the law.

A. The Law

Section 3(1), the pertinent portions of which are quoted in Appendix A of this brief, prohibits "undue or unreasonable preference or advantage" and "undue or unreasonable prejudice or disadvantage" to

> "any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic. * * *."

The words "region, district, territory" were added to this section by the Transportation Act, 1940. The Commission rests its orders in large part upon the claim that this amendment changed the law not only as to the subjects of prohibited preference and prejudice but also as to what constitutes preference and prejudice and what must be found in order to support an ultimate finding of a violation of this section. This contention will be dealt with in a later point. As a background to this later discussion, however, and also because the Commission finds undue prejudice and preference not only as between "territories as a whole" but also as between "the shippers and receivers of freight located therein", as to whom no change in this section of the law was made by the 1940 amendment, it is pertinent to examine the authorities briefly to discover what facts must be established and found in order to support an ultimate finding and order under this section.

First of all, it is obvious that no finding of undue prejudice and preference as between either territories or shippers and receivers of freight can be found because of differences in the levels of the class rates unless it appears that the corresponding class rates are the rates actually charged or demanded in each instance. Thus, if a particular kind of machinery is classified fourth class in Official territory but is classified sixth class in the Southern classification for purposes of transportation from the South to the North, the fact that the fourth class interterritorial rate is higher than the fourth class rate for transportation within Official territory would not mean that there is a difference in the rates actually charged upon which to base a finding of undue prejudice and preference. Similarly, if the Official territory railroads charge class rates on certain freight but for transportation of the same freight from the South or west to markets in Official territory the railroads have established exception or commodity rates materially lower than the class rates, the differences in the levels of the class rates themselves are entirely academic and immaterial.

Hence, the very first requisite to an ultimate finding of undue prejudice and preference based upon differences in the levels of the class rates is a finding and proof that on the same commodities on which class rates are charged in Official territory the railroads charge or demand corresponding class rates for transportation from the South, Southwest and West into Official territory.

Moreover, it is well settled both by decisions of the courts and by long administrative interpretation reflected in the reports of the Commission, that discrimination is something more than difference and that a mere showing of differences in rates does not establish undue prejudice and preference in violation of Section 3(1). *Texas & Pacific Ry. Co. v. United States*, 289 U. S. 627; *Indianapolis Freight Bureau v. Cleveland C. C. C. & St. L. Ry. Co.*, 23 I. C. C. 195; *Pensacola Chamber of Commerce v. Louisville & N. R. Co.*, 98 I. C. C. 567; *Hurst v. Boise Valley Traction Co.*, 146 I. C. C. 625.

For a finding of undue preference and prejudice there must be a preliminary finding and proof of a competitive relationship between the party preferred and the party prejudiced, so that the difference in rates is the source of benefit to the former and injury to the other. *City Ice & Supply Co.* v. *C. & N. W. Ry.*, 36 I. C. C. 514, 517; *Boston Wool Trade Asso.* v. *B. & A. R. R. Co.*, 78 I. C. C. 178, 183; *Paper and Paper Articles to New Orleans*, 96 I. C. C. 600, 608; *Dewey Portland Cement Co.* v. *Alton & E. R. Co.*, 176 I. C. C. 671, 685.

The following excerpts from the multitude of decisions by the Commission illustrate the long and consistent administrative interpretation of Section 3(1). In *Alexandria Paper Co.* v. *Atchison, T. & S. F. Ry. Co.*, 171 I. C. C. 252, at pages 257-258, the Commission said:

> "With respect to the three points at which the other producing points have an advantage the record will not support a finding of undue prejudice, as there is no showing of a competitive situation thereat as between complainant and its competitors."

In *Western Carolina Shippers' Assn.* v. *Asheville S. Ry. Co.*, 174 I. C. C. 353, it said at page 358:

> "The rates assailed to the complaining points do not appear to be properly aligned with the rates to the points alleged to be preferred, but the record contains no evidence of competition between the complaining points and the alleged preferred points; therefore a finding of undue prejudice can not be sustained."

Moreover, since it is only *undue* or unreasonable prejudice and preference which are prohibited, it has been held that the difference in rates must be found to be the cause of substantial injury to the party found to be prejudiced, and of substantial benefit to the other. *Smith Bros. Mfg. Co.* v. *Aberdeen & R. R. Co.*, 181 I. C. C. 137.

In *Adams Lbr. Co.* v. *Akron, C. & Y. Ry Co.*, 253 I. C. C. 179, 189, it was stated:

> "A mere disparity in rates is not sufficient to establish undue prejudice. In order to establish the fact

> that there is undue prejudice and preference, the evidence must establish that the alleged prejudice and preference constitute a source of undue disadvantage to one party and of undue advantage to another. *Danville Chamber of Commerce, Inc.* v. *Southern Ry. Co.*, 209 I. C. C. 571, 572."

In *Mason City Brick and Tile Co.* v. *C., M. St. P. & P. R. Co.*, 258 I. C. C. 312, the Commission said at page 313:

> "A disparity of rates does not necessarily result in undue prejudice, and a mere showing that rates of long standing in one group are higher than those in another group does not establish undue prejudice. No group adjustment can effect exact justice in rate making, and the small disadvantage to one point or another incident to such an adjustment does not constitute the undue prejudice made unlawful by section 3 of the act. See *Prine Lbr. Co.* v. *Ann Arbor R. Co.*, 156 I. C. C. 349, 353. The rate relation must be a source of positive advantage to another and of disadvantage to complainant."

In *Carbon Limestone Co.* v. *Pennsylvania R. Co.*, 173 I. C. C. 167, it was stated that the proof to support findings under section 3 "must be definite and convincing" (p. 172).

Similarly in *Northeastern New York Traffic Assn.* v. *Delaware & H. R. Corp.*, 200 I. C. C. 134, the Commission stated at page 146:

> "* * * Complainants' evidence consists of a mere showing of disparity of rates and of general declarations as to competition and injury supported by evidentiary facts, and a finding of undue prejudice is not warranted."

Again in *Alabama Rock Asphalt, Inc.* v. *Abilene & S. Ry. Co.*, 176 I. C. C. 555, it was said at page 565:

> "* * * The evidence dealing with the alleged undue prejudice resulting from the rate adjustments in effect

> from the southwestern producing points mentioned and Bowling Green is so general in nature, however, that we are not justified in making any finding of undue prejudice and preference under section 3. While undue prejudice and preference may be established by a preponderance of evidence, that evidence must be such as to make reasonably clear how and where the prejudice and preference result from a rate maladjustment of which complaint is made. That may not be assumed or left to mere inference. Barrett Co. v. Atchison, T. & S. F. Ry. Co., 172 I. C. C. 319, 333. The record contains no substantial evidence that the Texas intrastate rates unduly prejudice the southeastern complainant or discriminate unjustly against interstate commerce."

In *United States* v. *Director General,* 80 I. C. C. 143, the Commission said:

> "It is contended, but not shown, that the lack of industries and communities on the Wharton is due to the rate adjustment here assailed. A finding of undue prejudice cannot be based upon assumptions such as these."

See also *House Heating Furnaces from East to Pacific Coast,* 255 I. C. C. 787, 792; *Gwinn Milling Co.* v. *Pennsylvania R. Co.,* 255 I. C. C. 690, 694; *Pure Oil Co.* v. *Atlantic Coast Line R. Co.,* 256 I. C. C. 723, 731.

Again, Section 3(1) has been construed as prohibiting differences in rates to competing shippers or localities only where the transportation is performed under similar circumstances or the rates are influenced by similar conditions. Section 2 of the Interstate Commerce Act, which likewise contains a prohibition against discrimination, in express terms limits the prohibition to the charging of different rates "in the transportation of a like kind of traffic under substantially similar circumstances and conditions." These latter words are not found in Section 3. However, it has been consistently held that Section 3 is to be construed and enforced as though these words were included therein, *Board of Trade of Carrollton, Ga.* v. *Central of Georgia Ry. Co.*, 28 I. C. C. 154; *Clover Splint Coal Co. Inc.* v. *Louisville & N. R. Co.*, 197 I. C. C. 276, 277.

Consequently, where the disparity in rates is due to differences in transportation conditions there is no basis for complaint by the shipper paying the higher rates even though such rates prevent or impede the doing of business in particular markets or territories. To regulate rates in such circumstances to enable shippers to reach markets would not constitute regulation of transportation charges but would constitute an attempt to equalize the advantages and disadvantages of the competing shippers. Thus carriers may not disregard the more unfavorable commercial and geographical conditions under which competing shippers operate with a view of placing them on an equality with shippers doing business under more favorable conditions. Nor does the Commission possess the authority to require carriers to equalize the fortunes of their shippers. *United States* v. *Illinois Cent. R. Co.*, 263 U. S. 515, 524; *Anchor Coal Co.* v. *United States*, 25 F. (2d) 462, 473.

Finally since Section 3(1) is a prohibition directed to the carriers, there can be no ultimate finding of a violation thereof unless there is a preliminary finding that the same carrier or carriers are responsible for or control both the preferential and the prejudicial rates, because a carrier cannot be held to violate the statute by something for which the carrier is itself not responsible and which, pursuant to an order of the Commission, it is powerless to correct. *Texas & Pacific Ry. Co.* v. *United States* 289 U. S. 627 (650); *Central R. of New Jersey* v. *United States*, 257 U. S. 247, 66 L. ed. 217, 42 Sup. Ct. 80.

The Commission's report will be searched in vain for the foregoing essential preliminary findings, and we submit that an examination of the record will disclose an absence of proof of the facts necessary for such preliminary findings and for an ultimate finding of a violation of Section 3(1).

B. There is no finding and no evidence to support a finding that for the transportation of the same kinds of freight from the South and West to Official territory on which class rates are charged within Official territory the railroads demand corresponding class rates. In fact both the findings and the evidence are to the contrary.

As has been said, in order to support the Commission's ultimate finding that the differences in the levels of the class rates within Official territory and those published from the South and West into Official territory result in undue preference and prejudice as between Official territory and shippers therein and Southern and Southwestern territories and shippers in those territories, the first essential finding would be that the corresponding class rates are actually charged to or demanded of competing shippers in the several territories. There would obviously be no justification for increasing the class rates charged to a manufacturer of electrical equipment in Official territory to the level of the class rates prescribed for transportation from the South to Official territory on the ground that the difference in the class rate levels gives the Official territory manufacturer a preference and subjects his southern competitor to prejudice unless his southern competitor is actually required to pay the higher interterritorial class rates. The Commission's reports contain no such finding. On the contrary, the findings and discussion in the reports, as well as the evidence, negative the existence of this essential foundation for an ultimate finding of a violation of Section 3.

First of all, a difference in the levels of the class rates would not mean a difference in the rates charged for the transportation of a particular commodity in the different territories unless the commodity is accorded the same classification rating for transportation within Official territory as for movement from the South and West into that territory. For example, if an article is classified second class or 85 per cent of first class in Official territory but is classified fourth class or 55 per cent of first class for interterritorial movement (see Report, p. 467, R. 82), although the first class rate might be 30 per cent higher in Official than in Southern territory for a given distance, the freight charge paid by the southern shipper for the transportation of this particular commodity would actually be less than the freight charge paid by the northern manufacturer. That there are a great many articles where the classification ratings are different in the several territories, so that the differences in the levels of the class rates do not reflect differences in the freight charges demanded or paid, is made clear by the Commission's discussion and findings at pages 469 to 475 of its report. Thus the Commission said (pp. 469-470, R. 84-85):

> "Despite the relatively high degree of uniformity in any-quantity and less-than-carload ratings, substantial disparities exist on individual article items as indicated in appendix 4 to this report. Thus, on certain items, on which the ratings are stated for any quantity, southern classification is never higher than either official or western, but has one rating of class 55 for which the two others name class 100, whereas official and western are alike in all but one such rating. As to less-than-carload, on items rated class 50 in official the ratings in southern range from classes 30 to 70, and in western from classes 55 to 85; on items rated class 70 in southern the ratings range from classes 50 to 100 in official, and from classes 55 to 85 in western; and on items rated class 55 in western the ratings range from classes 40 to 100 in official, and from classes 30 to 100 in southern.
>
> "Still greater variations, relatively, are presented in the carload ratings, set out in appendix 5, of which

> the following are examples; on items rated class 35 in official, the ratings in southern and western both range from classes 17½ to 55; on items rated class 40 in southern, the ratings in official range from classes 27½ to 70, and in western, from classes 17½ to 40; and on items rated class 45 in western, the ratings in official range from classes 27½ to 85, and in southern, from classes 30 to 55."

On page 508 (R. 123), the Commission found:

> "Abundant evidence has been received showing that the differences in classification ratings compel shippers, in each of the classification territories, to pay on certain articles transportation rates that are relatively higher than the rates paid on the same articles by shippers in one or both of the other territories, considering present class-rate levels in the respective rate territories. *In fact, on many articles a shipper in a lower-rated territory must pay higher rates than one in a higher-rated territory, owing to differences in classification ratings. The showing made is typical of the entire situation at present*, and would continue so with whatever rate level or levels we may find lawful in docket No. 28300 or in any other proceeding." (Italics ours.)

Then, too, the Commission's findings and discussion make it clear that there is a very substantial volume of freight for the transportation of which class rates are charged in Official territory but which is transported at commodity or exception rates from other territories into Official territory, so that again the differences in the levels of the class rates could not be the cause of undue prejudice and preference. This is shown by the Commission's finding that whereas 5.8 per cent of all carload freight transported within Official territory is charged class rates, only .9 per cent of the carload freight shipped from Southern territory into Official territory moves at class rates while 4.9 per cent has exception rates and 94.2 per cent is accorded commodity rates (pp. 479, 564, R. 94, 179).

This point finds further confirmation in the Commission's summary of the testimony of the few individual southern shippers who appeared as witnesses. They were called as witnesses for the Southern Governors Conference and presumably their testimony was offered as typical of the experience of southern shippers. The Commission's summary of the testimony of these nine shippers (pp. 615-619, R. 230-234) shows that all but two shipped to Official territory at commodity or exception rates. At page 618 (R. 233), the Commission records that the secretary and manager of the Atlanta Freight Bureau, who was the principal rate witness for the Southern Governors,

> "introduced in evidence an exhibit listing 14 groups of commodities, the rates on which were claimed to have been detrimental to southern shippers. Only 6 of the 14 move on class rates."

Again, in discussing the testimony presented on behalf of Southwestern shipper interests the Commission found (pp. 665-666, R. 280-281):

> "*We have referred to the fact that a comparison of first-class rates within or between territories does not, in most instances, reflect the differences between the rates on which the traffic moves. That observation is particularly suitable to the Southwest.* The extent to which exceptions have been published within, and to and from, that area is not specifically shown of record, but there is general testimony to the effect that *the class rates in issue move only a small proportion of the total traffic.* This is supported by the study made by a member of our staff showing the proportions of traffic transported on 1 day in 1942 on class rates, exception rates, and commodity rates.
>
> * * * * * * *
>
> "It will be noted that, on the day mentioned, *95.1 per cent of the total traffic transported from southwestern to official territory moved at commodity rates, and that only 1.5 per cent moved at class rates,*

> whereas of the total from official to southwestern territory 22.5 per cent was transported at class rates, and 25.5 per cent at commodity rates. Although the proportions of traffic moved at class, exception, or commodity rates between southwestern territory and other territories vary, a great preponderance of the traffic, except from official territory, moved at commodity rates. *The levels of the commodity rates are much below the class-rate levels.*" (Italics added.)

Thus, not only is there a complete absence from the Commission's reports of a finding of the first essential fact to support its ultimate finding that the differences in the levels of the class rates from the South and West to Official territory and those within Official territory cause undue prejudice and preference, but the findings which the Commission has made and the discussion of the evidence in the reports negative the possibility of such an essential preliminary finding.

C. The Commission's findings negative any conclusion that the differences in the levels of the class rates are the cause of substantial injury, prejudice and disadvantage to shippers or receivers of freight in the South and West or to those territories as a whole and of preference and advantage to Official territory and shippers therein

If, as is submitted, there can be no valid determination that rates are unlawful in violation of Section 3 without a preliminary conclusion that the differences in rates are the cause of substantial injury and benefit, then the Commission's findings as to the effect of the rate differences must support such a conclusion and the evidence in turn must sustain the findings. That is certainly not the case here.

In their briefs in the court below the appellees, confronted with a complete absence of any findings by the Commission which would support a conclusion that the differences in the levels of the class rates are the cause of substantial injury either to shippers and receivers in the South and West or to those territories as a whole, went to great lengths in discussing the testimony of witnesses on this point.

It is, of course, the function of the Commission to weigh the evidence and make findings of fact on the basis thereof, and if it fails to do so it is no part of the duty of the Court to examine the record for the purpose of making findings which the Commission has failed to make. The record is to be examined only to ascertain whether the evidence sustains those findings which the Commission has embodied in its report after weighing the evidence. In *United States* v. *Chicago, M. St. P. & P. R. Co.*, 294 U. S. 499, this Court said (pp. 504-505):

> "This court has held that an order of the Interstate Commerce Commission is void unless supported by findings of the basic or quasi-jurisdictional facts conditioning its power. *Florida* v. *United States*, 282 U. S. 194, 215; *United States* v. *Baltimore & Ohio R. Co.*, 293 U. S. 454. 'In the absence of such findings, we are not called upon to examine the evidence in order to resolve opposing contentions as to what it shows or to spell out and state such conclusions of fact as it may permit.' *Florida* v. *United States, supra.* Orderly review requires that this objection, being basic and jurisdictional, be disposed of at the beginning."

On the subject here discussed the Commission's reports contain clear preliminary findings evaluating the evidence upon this essential issue. If, nevertheless, the Court will go to the record and examine the testimony, to which appellees will doubtless make reference, of various witnesses with regard to their alleged objections to the differences in rate levels, it will find that either on the basis of further facts developed on cross examination or because the testimony of the witnesses themselves on direct examination indicated that they were not concerned with the class rates at all, or because it appeared that the witnesses' businesses had greatly prospered under the rates, the Commission's summary of the evidence correctly evaluates it. And it is submitted here that this summary negatives any conclusion that either shippers in the South and West generally or Southern and Western territories as a whole suffer injury by reason of the differences in the levels of the class rates.

Before examining the Commission's findings on this point, it is pertinent to observe that this conclusion naturally follows from at least two facts previously mentioned: first, that to a very large extent the railroads have provided exception or commodity rates for the movement of goods from Southern and Western territories to Official territory, so that the differences in the levels of the class rates are immaterial as to a large part of the freight movement; and second, that frequently Southern producers have the benefit of low inbound raw material rates which they are unwilling to surrender despite their pleas for rate uniformity.

The Commission has summarized the testimony of all of these southern witnesses at pages 615 to 619 of its report (R. 230-234). This summary can only be construed as a finding that there is no evidence that the differences in levels of the class rates are the cause of injury, prejudice and disadvantage to individual shippers in the South. This was the conclusion reached and forcefully stated by Commissioner Porter at pages 719 and 720 of his dissent (R. 334, 335), and concurred in by Commissioner Barnard (R. 340, ff.). For convenience, we repeat the Commission's summary of this testimony, adding paragraph numbers as an aid to discussion. The Commission stated:

"The testimony of shippers called on behalf of the Southern Governors' Conference respecting the payment of class rates may be summarized as follows:

(1) A manufacturer of washboards at Raleigh, N. C., ships washboards in less than carloads on class rates. In September 1941, a representative month, he made 42 less-than-carload shipments to official territory on which he paid total charges of $184.06. Charges on the official territory level would have been $15.14 less. One shipment was made to Dallas, Tex., on which he would have saved 77 cents at the official territory level. Twenty-five shipments were made to points in southern territory. Charges on the official territory level would have been $45.77 less than actually paid. The principal competitors are at Columbus, Ohio, and Saginaw, Mich., the latter with a branch factory at Memphis, Tenn. If the official territory level had applied not only from Raleigh, but also from Columbus to the South, the charges from Columbus would be reduced by greater amounts than from Raleigh. Application of the official territory level of rates on the September shipments to the North would have reduced his freight charges by 8 per cent. Twenty-five per cent of the shipments to the North were to Detroit, Mich., a short distance from Saginaw, where one of his chief competitors is located. The business of the manufacturer who gave this testimony however, has increased substantially.

(2) The operator of a tanning plant at Andrews, N. C., testified that he had recently taken over the tannery at that point, which had been out of operation for several years, and in May 1942, began tanning operations. As of the date of the hearing, September 28, 1942, the company was beginning to make out-bound shipments of leather to some of the 20 principal points to which leather moves, most of which are in official territory. While most of the shipments will be in carloads, on which both class and commodity rates apply, some less than-carload shipments are anticipated, on which the class rates will apply. Between May 22, 1942, and June 18, 1942, he shipped

9 carloads of green salted hides, 6 from New York, N. Y., 2 from Harrison, N. J., and 1 from Detroit, Mich., and 5 carloads of dry hides, 3 from New York, 1 from Brooklyn, N. Y., and 1 from Waverly, N. J., on which class rates applied. The total charges at the applicable class rates were $6,063.45, whereas the total charges at the official territory level would have been $4,504.63. Leather is usually sold f. o. b. tannery or warehouse. This company has experienced difficulty in selling and quoting prices competitive with tanneries able to ship at lower freight rates.

(3) Imported hides now move from the New York area to Andrews. Under present war conditions most steamers discharge at New York, but, in peacetime, cargoes of hides could be discharged at Norfolk or New Orleans, and this company might obtain imported hides through those ports. This company will also use domestic hides which will be obtained principally in Chicago, Ill., Detroit, Mich., and St. Louis, Mo. There are very few hides produced in the South. However, in *Schoen Bros., Inc.* v. *Erie R. Co.,* 255 I. C. C. 501, 258 I. C. C. 161, we prescribed reasonable rates on green salted hides from certain points in Alabama, Georgia, and Florida, to Endicott, N. Y., and from Atlanta, Ga., to Boston, Mass. The four principal markets for finished leather are New York, St. Louis, Chicago, and Philadelphia.

Quebracho extract, used in tanning, is imported. The differences in freight rates on this commodity are said to be more drastic than on hides and leather, but no exhibit was introduced showing these rates. Chestnut extract, also used in tanning, is produced in the South and the freight rate is a very small cost factor.

(4) A shipper of wine at Atlanta complained of the rates on wine from that point to official territory. The witness knew little about rates, and an exhibit prepared by his traffic man was erroneous. The applicable rates to most of the points shown on the exhibit are combination rates, one factor of which are exception rates from Atlanta to border points. His principal competition comes from New York City, but he also operates a winery at Brooklyn, N. Y. His

product is nationally advertised and he does a nationwide business. A larger plant has recently been constructed at Atlanta indicating that the business has made substantial progress at that point.

(5) Testimony for a manufacturer of macaroni products at Memphis, Tenn., was offered by the manager of the Memphis Freight Bureau. For example, from Memphis to Evansville, Ind., 301 miles, the rate on macaroni and noodles and spaghetti, in less than carloads, is 68 cents, whereas from Chicago, 284 miles, the rate is 48 cents, a difference in favor of Chicago of 20 cents. If both rates were made 50 percent of the eastern first-class scale they would be 49 cents and 48 cents, respectively, and the rate advantage of 20 cents which Chicago has would be reduced to 1 cent. This shipper has never complained to the railroads about his rates, which are fourth class (50 percent of first class) in official territory and, by exception, class 50 in the South, in less than carloads: In *Macaroni & Noodle Mfrs. of America* v. *Alabama G. S. R. Co.*, 50 I. C. C. 289, the fourth-class rating was found not shown to be unreasonable or unduly prejudicial for all territories. In the South, fourth class is 55 percent of first class. This shipper has competitors at Louisville, Ky., and New Orleans, La., and distributes his products throughout the South and to Kentucky and some Ohio River points.

Five other shippers who testified on behalf of the Southern Governors' Conference do not ship their products on class rates. They testified with respect to furniture from Birmingham, Ala., glass bottles from Chattanooga, Tenn., cucumber pickles from Faison, N. C., peanut products from Columbus, Ga., and grading machinery from Toccoa, Ga., and Vicksburg, Miss.

(6) Present rates on glass bottles from Chattanooga to official territory are on a combination basis, using a commodity rate to Cincinnati, plus exception rates beyond. Approximately 25 percent of the production of the shipper who testified is shipped to the North, although he has only a 'limited amount of tonnage' to offer in that territory. His sales have also been extended to the West.

(7) The pickle manufacturer ships 25 percent of his output of salt stock and brine pickles to the North, and the finished product to the North and South. The applicable rates are truck-competitive rates and are lower than the normal official territory level of rates. The witness's chief concern is that his present rates might be increased.

(8) The shipper of peanut products ships them to all parts of the country, except New England, on rates lower than class rates. The company purchases a million dollars worth of peanuts annually and has annual sales of 5 million dollars.

(9) The manufacturer of grading machinery ships his products all over the world. His first plant in the East was at Peoria, Ill. Later he established plants at Toccoa and Vicksburg. He made no complaint about his rates and testified that the plants were established in the South because of the many advantages in that territory."

As will be seen from the foregoing, the Commission found that only two of the industries or shippers represented by these witnesses shipped their products on class rates. These were a manufacturer of washboards in Raleigh, N. C., referred to in paragraph 1 above, and an operator of a tanning plant in Andrews, N. C., referred to in paragraph 2. The washboard manufacturer's business had increased substantially in recent years and about 25 percent of his shipments were sold at points in Official territory in proximity to Saginaw, Michigan, where one of his competitors was located. The operator of the tanning plant at Andrews, N. C., started operations in May 1942 and most of his output was intended for movement to Official territory in lots consisting of carload and less-than-carload shipments. This witness testified that he was subjected to "considerable difficulty" in meeting the competition of other tanneries (R. 1517-1521). In its summary the Commission states that the tannery products move on both class and commodity rates, but it was testified by a witness that the rates on which these products moved are commodity rates (R. 4003, 4004).

The shippers of the other products referred to in the above numbered paragraphs do not, as is indicated, make use of class rates in the shipment of their products and consequently their testimony is of no relevancy. In fact, certain of these shippers said that they had no complaint about their rates and that they had established their plants in the South because of the many advantages in that territory. See, for instance, the testimony of the witness referred to in paragraph 9.

In so far as individual shippers in the South are concerned, it is to be assumed that the widely publicized hearings called forth all who had grievances against the class rates. And certainly it can be inferred that the vigorous counsel who represented the Southern Governors brought to the witness stand all who could be found who would testify on the point. The result as shown by the Commission's findings was that out of the thousands of manufacturing establishments in the South, representatives of exactly nine appeared as witnesses. Of these only two shipped at class rates, and of these two the business of one, a manufacturer of washboards at Raleigh, N. C., had substantially increased in recent years, while the other, a tanning plant, had begun operations only four or five months before its representative testified and was already "beginning to make shipments' to the 20 principal points to which leather moves, most of which are in official territory" (Report, p. 616, R. 231).

The Commission, at page 618 of its report (R. 233), also referred to the testimony of the Secretary and Manager of the Atlanta Freight Bureau, appearing for the Southern Governors, who presented testimony purporting to indicate shipper dissatisfaction with southern class rates.

This witness introduced evidence listing fourteen groups of commodities, the rates on which were claimed to have been detrimental to southern shippers. As pointed out by the Commission, however, only six of the fourteen moved on class rates. These consisted of calendars, electric appliances, lead products, iron or steel tanks, cloths and rags. As to the electrical appliances, the Commission referred to its decision in the *Southern Governors* case in which the rates on these commodities had been dealt with. With regard to the other commodities, it appears on the basis of the Commission's own statements either that the shippers shipped their entire output to southern points and had never asked the railroads for competitive rates to the North, or that the class rates appeared to be of no controlling importance in the sale of the products.

At page 618 of its report (R. 233) the Commission also refers to the testimony of a witness for the Nashville Freight Bureau who criticized the railroads for failure to reduce rates on steel automobile truck bodies from Nashville, Tenn. to Metuchen, N. J. This witness made no complaint against the general level of the class rates or the territorial relationships. Even as to the particular rates complained of, it appears that they did not prevent him from shipping his product to Metuchen. This witness criticized the rates also on shell boxes from Nashville to all points in Official territory. It appears however that the rates that he sought had actually been established to thirteen destinations, which presumably were all that he was interested in.

Thus, based upon the Commission's own summary, it appears that the record contains evidence on the question of discrimination by not more than five or six shippers located in Southern territory who use class rates. Even as to these five or six shippers, the evidence in some instances is decidedly vague and involves criticism of the rates only from specific origin points to specific destinations. No claim is made by any shipper or group of shippers that the class rates, as a whole, in Southern and Official territories result in unjust discrimination against southern shippers. The few specific origin points involved cannot be considered representative of Southern territory as a whole nor is there any finding by the Commission that they were.

With all earnestness, it is submitted that the foregoing evidence does not constitute proof sufficient to sustain a finding that the differences in the levels of the class rates are the cause of substantial injury and undue prejudice to southern shippers—much less to Southern territory as a whole.

In regard to the West, the Commission records (p. 673, R. 288) that "only three commercial witnesses, speaking for individual establishments in the Southwest and Western Trunk Line territory testified in this proceeding." These were a steel manufacturer at Denver, Colo., who uses class rates to a very limited extent and did not advocate rate parity with Official territory; a manufacturer of coal-washing machinery at Pittsburg, Kan., and a manufacturer of lamps and stoves at Wichita, Kan. The last two testified that they shipped most of their products to Official territory. The Commission said that "neither complained that the rate adjustment had discouraged or barred their enterprises from locating where they are" (p. 673, R. 288), and, as pointed out by Commissioner Porter in this dissenting opinion (pp. 720, 721, R. 335, 336), neither of them "left any impression that he was hurt by the present adjustment."

Turning next to Southwestern territory, there was again no finding and no evidence that the differences in the class rate levels have been the cause of prejudice or injury to any shippers. No individual shipper testified in criticism of the existing class rates applying from the Southwest to Official territory. There was presented, however, a witness, Professor Frederick of the University of Texas, who glibly referred to the "economic burden" of the rate disparity upon the business of five shippers. The testimony of this witness is reviewed by the Commission at pages 670 and 671 of its report (R. 285, 286). As the Commission says, he gave no indication as to whether the rates applicable to the particular commodities to which he had reference were class or commodity rates. Nor does the evidence show the existence of competition between these five concerns in the Southwest and competitors, if any, in Official territory.

With regard to "territories as a whole", it seems plain that they can be the subject of injury, prejudice and disadvantage as the result of freight rates only to the extent that shippers located in the territories are so affected or to the extent that shippers are prevented from locating in the territories or industrial and economic development is stifled by the freight rates.

The first angle in so far as the territories are concerned is disposed of by the evidence and findings just discussed. In other words, there is no finding and no proof that the differences in the class rate levels cause substantial injury to individual shippers in Southern, Western Trunk Line or Southwestern territories and thereby to the "territories as a whole."

As the Commission, itself, remarked in discussing the testimony of the spokesman for the Southwest (p. 671, R. 286):

> "The witness did not specify what part, if any, of the freight charges assessed on the shipments of the five manufacturers studied were at the class rates here in issue; nor the kind (class, exception, or commodity) of rates published in official territory that were used in the comparisons. Undoubtedly many of

> the in-bound raw materials, and some of the outbound finished products such as canned goods and lime, did not move at class rates; and it is unlikely that all the official territory rates were class rates that could be directly affected by the decision in this proceeding. **Apparently, the** traffic of only these five companies was surveyed, with *no attempt to produce a representative cross-section of Texas industries, some of whose freight charges may be lower than those in official territory.*" (Italics added.)

So far as the other angle of the matter is concerned, there is the evidence outlined by the Commission at pages 619-624 of the report, which completely negatives any suggestion that the differences in the class rate levels have curtailed or restricted the industrialization of the South or the location of industries in that part of the country. As illustrative we quote the following findings from the report, which are fully supported by the evidence and certainly dispel any possibility of a preliminary finding that the differences in the levels of the class rates have been or are the cause of substantial injury or prejudice to the "territories as a whole".

> "The industrial development of the East is due to many factors other than transportation services and costs, such as climate, soil, natural resources, available water power, supplies of natural gas and coal, and early settlements of population which antedated the building of railroads.
>
> "The principal factors which control the location of industries are: Availability of and cost of obtaining and assembling raw materials, availability of markets, including cost of reaching such markets, adequacy and cost of fuel and power, climate, labor, capital, and, sometimes, momentum of an early start, and the personality of the individual founding the industry. In 1939, freight revenue on commodities in the manufactures and miscellaneous group was but 5.3 per cent of the destination value of manufactured goods. From this it would seem that any differences in freight charges resulting from differences in class rate levels

is only a small fraction of that figure (Report, p. 619, R. 234).

* * * * *

"In order to determine if the South is or is not growing industrially, statistics over a period of years must be examined. Unless otherwise stated, the years used are 1929 and 1939. The following facts are derived from the statistics examined:

"For the 10-year period, 1929 to 1939, the *number of wage earners in manufacturing industries in the country as a whole decreased 11 percent; in official territory, 12 percent;* and in New York State, 13 percent. There was *an increase of 5 percent in the South.*

"There was a 22-percent *decrease in manufacturing wages for the entire country,* 23-percent decrease in official territory, and 3-percent decrease in the South. *Some southern States had an increase.*

"The *values of manufactured products for the entire country decreased 21 percent; in official territory, 25 percent;* in New York State, 29 percent; and there was *a 1-percent increase in the South.* North Carolina had an increase of 8 percent.

"*Value added by manufacture,* for the *United States as a whole, decreased 23 percent,* 24 percent in official territory, 12 percent in the South, and in New York State, 33 percent. *North Carolina had an increase of 7 percent.*

"From 1930 to 1940, there was a greater decrease in agricultural employment in southern than in official territory; but *manufacturing employment increased in the South and decreased in the North.*

"In 1941, *income payments* for the United States were 111 percent of those in 1929, *for official territory 100 percent,* and *for the South 128 percent.*

"From 1930 to 1940, the number of *gainfully occupied workers* in manufacturing in official territory decreased from 70.5 percent to 69.4 percent of the country's total, but *in the South, increased from 10 percent to 11.9 percent.*

"During the period from 1929 to 1939, the number of *wage earners* in the *canned fruit and vegetable industry in the South increased 68 percent,* as compared with an increase of 28 percent in official territory.

"The number of *wage earners* in the *cotton industry in 10 northern States decreased 45 percent*, as compared with *an increase of 12 percent in 6 southern States.*

"*Value of cotton products* decreased 55 percent in the northern States and 12 percent in the southern States, and the value *added by manufacture decreased 48 percent in the North and increased 8 percent in the South.*

"*Manufacture of heating and cooking apparatus*, except electric, during the 10-year period, *increased in the South* and *increased* (should read '*decreased*') *in the North. There was an increase of 39 percent in the number of wage earners in the South*, and a *decrease of 21 percent in the North. Value* added by manufacture *increased 8 percent in the South* and *decreased 32 percent in the North.*

"The *number of wage earners* in the *furniture industry increased 18 percent in 6 southern States* and *decreased 38 percent in 12 northern States.* Value added by manufacture decreased 43 percent in the northern States and less than 0.5 of one percent in the southern States.

"There are other branches of manufacturing that have progressed more rapidly in the South than in the North, but there are some in which, during the 10-year period, the industrial trend was not as favorable in the South as in the North. These include the manufacture of morticians' goods, certain flavoring extracts and sirups, and flour and grain-mill products (Report, pp. 621-22, R. 236-237).

• • • • • • • •

"A witness for the southern interests was the editor of an industrial publication devoted to the cause of industrial development of the South and Southwest. Excerpts from copies of this publication in 1940, contain a *statement by the southern governors that, 'In two years the volume of the South's manufactured products has increased approximately 35 percent* and is now 2½ times the value of its agriculture output; during the same period the *number of manufacturing plants in the South increased by 803 as* *contrasted to a decline in the rest of the United States of 3120.'* The publication contains *many pages listing new industries that have located in the South, some of which are the largest in the country.* They include plants manufacturing cigarettes, textiles, footwear, household furniture, paints, stoves, ranges, water heaters, tin cans, clothing, vegetables, drugs and medicines, flour, optical goods, and fluorescent lamps" (Report, p. 622, R. 237). (Italics added.)

Attention is particularly directed to the finding on page 622 (R. 237):

> "No specific instance was proved where an industry was not established in the South because of the class-rate level."

Even this finding, however, does not tell the whole story of the evidence because it was affirmatively testified by witnesses who had had experience in locating industries that they had not been deterred from locating plants in the South because of the differences in the class-rate levels (R. 3151, 3809-98, 4179-89, 4785-86). This disposes of the Commission's apparent attempt to minimize the finding just quoted by the remark:

> "However, in the nature of things this fact would be difficult to prove because of the many factors entering into the location of an industry."

Moreover, it must be recalled that while the Southern Governors were with one breath proclaiming to the world the great industrial progress of the South and in the next trying to create the impression before the Commission that the difference in the class rate levels has prevented this very progress, there are important interests in the South itself who agree with the former but oppose the latter activity of the governors. Thus, the Commission reports (p. 615, R. 230):

> "Several industrial organizations and groups of shippers in the South, such as the Southern States

Industrial Council, the Southeastern Shippers' Conference, and the New Orleans Joint Traffic Bureau, opposed pleas for uniformity of class rates on the eastern basis. They expressed the opinion that the present rate structure within the South, and between the South and other territories, has proven generally satisfactory and that the reductions in class rates sought by the Southern Governors' Conference would result in substantial railroad revenue losses, which would require, as an offset, increases in southern commodity rates that would seriously injure southern industry."

The state of the record on this vital point is aptly described by Commissioner Porter in his dissent, where he said (p. 722, R. 337):

> "An unbiased consideration of the foregoing data, together with others of similar import upon this record, can lead to but one conclusion, namely, that *the class-rate adjustment here before us has had no appreciable effect, one way or the other, upon the industrial or economic development of the South or the West, and that not a single shipper, nor any particular class of shippers, nor any particular territory, has suffered injury by reason of that adjustment.* Accordingly, I can find in this record no adequate support for the majority findings of undue prejudice and preference." (Italics added.)

Similarly, Commissioner Barnard remarked (p. 728, R. 343):

> "I am unable to find in this record sufficient evidence to support the claim of the Southern Governors' Conference that the class rate structures within the South and between the South and official territory have restricted the industrial growth of the South and have favored and stimulated the growth of industry in the North. On the contrary, *the evidence shows that the South has progressed industrially during the last decade much more rapidly than any other section of the country.* Furthermore, the evidence fails to

> convince me that the products of the South cannot compete with the products of official territory in that territory, but for the purpose of the argument, let it be assumed that the contrary is true. Nevertheless, if true, it does not come about because of the difference in the class rates but is due to other causes which have no connection whatever with these rates." (Italics added.)

In view of this state of the record and of the Commission's findings as to the proof on this matter, its ultimate finding 3 (p. 701, R. 316) that the relationship between the class rates in the several territories

> "subjects southern, southwestern, and western trunk-line territories as a whole and the shippers and receivers of freight located therein to undue and unreasonable prejudice and disadvantage, in violation of section 3 (1) of the act"

is plainly arbitrary and unjustified, if substantial injury and benefit are essentials of such a finding.

D. If portions of the Commission's reports are to be interpreted as constituting a finding that the class rates in Official territory and those for transportation from other territories into Official territory are controlled by similar circumstances and conditions, such a finding is arbitrary, contrary to the evidence, and inconsistent with other statements or findings made by the Commission.

It must first be again recalled that both the class rates within Official territory and the existing class rates from Southern and Western territories into Official territory were prescribed by the Commission, itself, after extensive investigations and on the basis of evidence pertinent thereto (pp. 516 *et seq.*). Therefore, there is certainly a strong presumption that the fact that the levels of the rates are different is due to the existence of different circumstances and conditions affecting the class rates in Official territory and the other territories. This is clearly shown by the quotations from the reports of the Commission in the proceedings in which these different class rate scales were prescribed, which are set out earlier in this brief, *Eastern Class Rate Investigation*, 164 I. C. C. 314, 391; *Western Trunk-Line Class Rates*, 164 I. C. C. 1; *Western Trunk-Line Class Rates*, 204 I. C. C. 659, 660.

There is no finding and no evidence that there have been such changes in conditions that these differences affecting the levels of the class rates in the several territories have been eliminated, and that the class rates are now charged in all territories under substantially similar circumstances and conditions.

The lower court plainly recognized the inadequacy of the proof of injury and disadvantage and the lack of evidence as to similarity of conditions but upheld the Commission's action, evidently upon the ground that the amendment of Section 3 (1) of the Act by the Transportation Act, 1940 and the Ramspeck Resolution rendered such findings and proof no longer essential in a proceeding involving alleged undue prejudice and preference as between rate territories. The Commission apparently was also of the same view, which seems to have been largely responsible for its ultimate determination and orders. This then leads to consideration of the 1940 legislation and whether it accomplished a change in the substance of Section 3 and the essentials of undue prejudice and preference thereunder.

POINT III

The Court below and the Commission erred in concluding that the amendment to Section 3 (1) of the Interstate Commerce Act by the Transportation Act, 1940 coupled with Section 5 (b) to the latter Act so changed the law as to require and sustain the Commission's decision and orders.

By the Transportation Act of 1940, paragraph 3 (1) of the Interstate Commerce Act prohibiting undue prejudice and preference was amended simply by the addition of "region, district, territory" to the list of persons or things not to be unduly prejudiced or preferred. As a result, that section was made to prohibit undue or unreasonable prejudice or disadvantage and undue or unreasonable preference or advantage

> "to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, * * *"

By the same Act, Congress adopted the so-called Ramspeck Resolution, which was paragraph 5 (b) of the Interstate Commerce Act, 1940 and read as follows:

> "The Interstate Commerce Commission is authorized and directed to institute an investigation into the rates on manufactured products, agricultural commodities, and raw materials, between points in one classification territory and points in another such territory, and into like rates within any of such territories, maintained by common carriers by rail or water subject to part I of the Interstate Commerce Act, as amended, for the purpose of determining whether said rates are unjust and unreasonable or unlawful in any other respect in and of themselves or in their relation to each other, and to enter such orders as may be appropriate for the removal of any unlawfulness which may be found to exist: *Provided,* That the Commission in its discretion may

> confine its investigation to such manufactured products, agricultural commodities, and raw materials, and the rates thereon as shippers thereof may specifically request be included in such investigation."

These two measures have occupied an important part in the discussion in the Commission's report and in the opinion of the lower court.

The reasoning of the lower court is altogether confusing. At one point it says (R. 1431):

> "It does not appear that the Commission has herein acted upon any assumption that the 1940 changes altered the basic principles governing its action."

It then proceeds to a discussion of what it conceives to be the grounds of the Commission's decision, which plainly imply a conception on the part of the Commission that the law had somehow been changed to justify it in finding rates unlawful if upon different levels although they would not have been unlawful under the Act as it previously existed, and the court concludes (R. 1433):

> "in our opinion Par. 3(1) now empowers the Commission to find such rates unlawful even though they would have been lawful in the light of all relevant considerations before the amendment. We may, indeed, take it for granted that they were lawful previous to the amendment since they had been in the main the result of comparatively recent investigations and orders of the Commission."

It was the impression of the lower court as to the Commission's action (R. 1431):

> "that in determining the existence of discriminatory rates it has construed the changes in the statute to mean that where it is found that class rates are different in the different territories, and interterritorially, and those differences cannot be justified under recognized principles of rate making by proof of sufficient differences in costs of transportation, com-

> position and amount of traffic, competition by common carriers other than railroads, and the like, those rates may be found unjustly preferential or prejudicial because unduly discriminatory and consequently unlawful as between regions, districts and territories.''

The court expressed the view ''that this interpretation of Par. 3(1) of the Act as amended is supported by the legislative history.''

At page 688 of its report (R. 303) under the heading ''*Recent Amendments of the Act*'', the Commission said:

> ''While the rates in issue in this proceeding are to be tested by all pertinent provisions of the act, it is important to give particular attention to certain amendatory legislation which Congress has recently enacted.''

The addition of the words ''region, district, territory'' to Section 3 (1) and the Ramspeck amendment are then referred to. The Commission stated that it had advised Congress that ''it might consider the instant proceeding as an investigation under its special legislation'' (p. 689, R. 304). Then having asked itself the question whether ''these amendments to the act added any new inhibitions against discrimination or enlarged the power of the Commission over this subject?'', the Commission, after several pages of discussion, concluded (p. 692, R. 307):

> ''it is clear that the main purpose which Congress had in mind was to bring about a greater degree of equalization, harmony, and uniformity in the different regional or territorial rate structures of the country. The method employed to accomplish this purpose is equally plain. By the amendment to the substantive antidiscrimination provisions of section 3 (1) all discriminations in the form of undue or unreasonable preference or advantage, or undue or unreasonable prejudice or disadvantage, as between regions, districts, or territories, viewed as separate

> entities, were brought directly within the purview of the act along with all the other inhibitions previously included. We were then authorized and directed by the other provisions mentioned to remove any such discriminations found to exist in a proper proceeding. This means that such discriminations as those mentioned which result from differences in the methods of distributing the general rate burden in the several rate-making territories, or from any other cause, if not justified upon proper consideration of recognized elements of rate making applied in the light of the amended law *are unlawful and should be corrected.*"

It is plain, therefore, that the majority of the Commission were of the view that the amendment to Section 3(1) and the Ramspeck Resolution constituted a Congressional mandate to the Commission in this proceeding to prescribe uniform rates. They have regarded the substantive law as so changed that rates on different levels in different territories are *prima facie* unlawful, and that, unless the burden should be sustained of proving differences in costs of transportation or other facts commensurate with the differences in levels as between territories, highly remunerative rates become unlawful merely because lower than rates in other territories.

It is submitted that both the Commission and the lower court were in error in their view of the effect of the 1940 legislation upon the Act and the lawfulness of railroad freight rates thereunder.

As to Section 1 (4) and (5) (a), the conception of the law upon which the Commission predicated its order would mean that the rates in one territory must be held in excess of reasonable maximum rates if higher than those in another territory and that the rates in the latter must be held to be less than reasonable minimum rates because lower than the rates in the former. As to Section 3, the argument would be that, contrary to the long accepted interpretation, discrimination means difference, without more. The Commission says (p. 691, R. 306):

> "Considering the breadth of the language used in the amendments here under consideration, the evils sought to be cured by this legislation, the history of the times when the law was amended, as well as the statements of the legislators as to the purposes of the amendments—all proper aids of statutory interpretation—it is clear that the main purpose which Congress had in mind was to bring about a greater degree of equalization, harmony, and uniformity in the different regional or territorial rate structures of the country."

The words of the 1940 legislation plainly do not warrant any such conclusions. No change was made in Section 1 or in any definition of maximum or minimum reasonable rates. As for Section 3, the only change was the addition of the words "region, district, territory" to the list of parties or interests as between whom undue preference and prejudice are prohibited. There is no other verbal change such as would be necessary to alter the concept of undue prejudice and preference or the requirements essential to a finding thereof. Certainly this is so as to all of the parties or interests previously listed in Section 3 (1), such as persons, companies, firms, corporations, associations, localities or ports. In other words, there is no reason to believe from this amendment that the proof and preliminary findings essential to an ultimate finding of undue prejudice and preference as between corporations, localities or ports were changed in any way by the addition of "region, district, territory" to the list. On the contrary, the very fact that these three terms were added to the list can mean only that a finding of undue prejudice and preference as between them must be supported by the same kind of preliminary findings and proof as are necessary for a finding of undue prejudice and preference between persons, localities or ports. The circumstances indicating injury and prejudice, may, of course, differ, just as they differ between a case involving individual shippers and in a case of discrimination between localities or port districts. But there is no reason to conclude that findings of substantial injury and benefit and of similar circumstances and conditions are any less requisite to an ultimate finding of a violation of Section 3(1) where regions, districts or territories are concerned than in a case involving individual shippers, localities or ports.

As for Section 5(b) of the Transportation Act, 1940, this was in no sense an amendment to the substantive law but was merely an authorization and direction to the Commission to conduct an investigation.

The conclusion is inescapable that those comprising the majority of the Commission in interpreting these provisions of the 1940 Act were led to give effect rather to what they conceived to be the purpose of the agitators for uniformity than to the language of the legislation and the intention of Congress as indicated thereby. Thus, after asking whether the 1940 legislation changed the substantive law and enlarged its power, the Commission said that "in seeking an answer to this question it is pertinent and helpful to review briefly the legislative background of these amendments" (p. 689, R. 304). It included in its report certain excerpts from the Congressional debates and reached its conclusion as to the effects of the amendments by considering, as it said among other things, "the history of the times when the law was amended, as well as the statements of the legislators as to the purpose of the amendments."

It is perhaps not strange that the majority have been thus influenced. Assuming, as the majority report states, that they have given heed to "the history of the times" and "the statements of the legislators", they have of course noted the statement of a Congressman quoted earlier in this brief. On the other hand, the excerpts from the Congressional debates quoted in the footnote on page 691 of the report (R. 306) hardly present a complete or fair report of the views expressed by members of Congress regarding the purposes of the amendments. For some reason the Commission in this footnote quotes only the remarks which appear to lend support to the majority's interpretation of the amendments and are responsive to the wave of agitation in the South.

In a brief being filed by other appellants herein, the history of the 1940 legislation will be reviewed and examined more at length. It will therefore suffice here to cite only a few matters indicating that the Commission was led to a misconception of the effect of the legislation by confusing the remarks of the agitators with what Congress really did.

That many things were being done at that time to appease the agitators of the South is apparent in the following comments when the bill embracing the amendments was debated in the Senate on May 22, 1939 (Congressional Record, p. 5889, vol. 84, part 6):

> "Mr. Wheeler: I also wish to call the attention of the Senator from Texas to something which the Senator from Alabama already knows, that recently the President of the United States appointed a new Interstate Commerce Commissioner. He is the author of a study on freight-rate discriminations. The State of Alabama now has two Commissioners on the Interstate Commerce Commission, and both of them are there, as I understand, because of the request and suggestion of the Senator from Alabama. I congratulate the Senator upon the influence he now has, and I am sure that with these two added Commissioners from Alabama—
>
> "Mr. Hill: And one from Texas.
>
> "Mr. Wheeler: I am not sure that there are not two from Texas.

> "Mr. Connally: That would be cause for comment.
> "Mr. Wheeler: Yes. Unquestionably this matter will be straightened out."

However, the majority's footnote makes no reference to the statement of Representative Halleck, reported in the Congressional Record, page 9712, Vol. 84, Part 9, 76th Congress, 1st Session, where he said:

> "Something has been said about the alleged freight rate differentials of the South. I sat through all those hearings and heard the claims of the people who came there. I submit on the record of the hearings that when we finally got through with them the most they asked was some extension of the anti-discrimination provisions of the Interstate Commerce Act to apply to regions and sections. We wrote that in the bill. In addition they asked a direction to the Interstate Commerce Commission that the Commission inquire into the alleged discriminations with a view to correcting them if any existed. That is all the people who came there asked us for, and I submit it on the record of the hearings."

Moreover, while noting that Senator Wheeler in answer to a question from one of the Southern Senators, Senator George, as to whether the amendment of Section 3(1) "will make toward the equalization of rates in the various regions" replied, "I do not think there is any doubt about that at all, because that is the purpose of the bill; it is the intention of the bill", the Commission failed to observe that this same Senator during the debate in the Senate on May 22, 1939, in response to a question from Senator Frazier of North Dakota, said the bill "does not mean that rates are to be equalized". This statement culminated the part of the debate which is quoted below (Congressional Record, p. 5890, vol. 84, part 6):

> "Mr. Frazier: Is it the expectation of the Committee that by the amendment in section 52 [now section 5(b) of the Act] the rates in the various

classification territories will be equalized or made the same in different territories?

"Mr. Wheeler: I do not think that is possible.

"Mr. Frazier: I do not see how it is possible. I was wondering what the intention was.

"Mr. Wheeler: It is not possible for a number of reasons. For example, it costs more to carry freight over the mountains in two trains than to carry it on the plains in one train. Likewise, we must recognize the fact that railroad transportation service and rates depend somewhat on the intensity of the traffic. In long stretches of territory with no traffic, shippers must pay more for railroad service than do shippers in a densely settled part of the country where traffic is plentiful and where there is much competition from busses, trucks, and things of that kind. However, it seems to me from my study of the question that apparent inequalities ought to be corrected. * * *.

"Mr. Frazier: In North Dakota we have a large volume of wheat to transport in the fall of the year, and because we have that large volume, and because our territory is practically level, we have a rather beneficial rate on wheat as compared with some other territories. Our railroad commission and traffic experts are afraid that the provision to which reference has been made will take that special rate away from us.

"Mr. Wheeler: I believe this provision will help the people of the Senator's State rather than harm them in many respects.

"Mr. Frazier: We have a much lower rate than prevails in many other sections of the country. If rates are to be equalized, it will mean raising our rates.

"Mr. Wheeler: The bill does not mean that rates are to be equalized. * * * The people of the Senator's State might just as well disabuse their minds of the fear that as a result of the bill they will lose any benefit which they now have. * * *."

It is also interesting to observe that when Senator Connally of Texas was asked by Senator Reed of Kansas whether he would desire that the amendments be made "sufficiently strong to require the State of Texas to remove the regional distinction which it maintains by State authority within the State of Texas", he replied that he "did not mean to imply that all these regions should be done away with" (Congressional Record, p. 5889, vol. 84, part 6).

The action of the majority of the Commission in reading into the Congressional direction that it conduct an investigation, a change in the substantive law not supported by the language of the legislation, and a mandate to it to prescribe rates in conformity with the demands of the public outcry from southern spokesmen for uniformity was entirely similar to what happened twenty years before in connection with an outcry from the agrarian interests of the West. Following the first World War, there occurred a serious depression in agriculture which adversely affected the Western and Middle Western States. This brought loud complaints against the freight rates and it was charged that the freight rates discriminated against agricultural products. There was much discussion in Congress and finally Congress enacted what became known as the Hoch-Smith Joint Resolution, approved January 30, 1925. This resolution provided in part:

> "That it is hereby declared to be the true policy in rate making to be pursued by the Interstate Commerce Commission in adjusting freight rates, that the conditions which at any given time prevail in our several industries should be considered in so far as it is legally possible to do so, to the end that commodities may freely move.
>
> "That the Interstate Commerce Commission is authorized and directed to make a thorough investigation of the rate structure of common carrier subject to the interstate commerce act, in order to determine to what extent and in what manner existing rates and charges may be unjust, unreasonable, unjustly dis-

> criminatory, or unduly preferential, thereby imposing undue burdens, or giving undue advantage as between the various localities and parts of the country, the various classes of traffic, and the various classes and kinds of commodities, and to make, in accordance with law, such changes, adjustments, and redistribution of rates and charges as may be found necessary to correct any defects so found to exist.
>
> * * * * * * *
>
> "In view of the existing depression in agriculture, the Commission is hereby directed to effect with the least practicable delay such lawful changes in the rate structure of the country as will promote the freedom of movement by common carriers of the products of agriculture affected by that depression, including livestock, at the lowest possible lawful rates compatible with the maintenance of adequate transportation service: * * *."

With a view to carrying out the mandate of this resolution, the Commission instituted a number of nationwide investigations into the rates on various kinds of freight. Following these investigations, it ordered reductions in the freight rates for the transportation of various agricultural commodities and, on the ground that the Hoch-Smith Resolution had effected a change "in the basic law," it found the previously existing rates to be unreasonable. These orders came to this Court in *Ann Arbor R. Co.* v. *United States,* 281 U. S. 658, and *Atchison, T. & S. F. Ry. Co.* v. *United States,* 284 U. S. 248. The Court held that the Commission had misconstrued the effect of the Hoch-Smith Resolution and that, although directing the Commission to investigate the freight rates, it had made no change in the substantive provisions of Sections 3(1) and 15 of the Act. In the *Ann Arbor* case, the Court said (p. 666):

> "The joint resolution is the outgrowth of several measures proposed in Congress but not adopted. Some of the measures may have been designed by

their proposers to make real changes in existing laws relating to transportation rates. But they are not before us. The measure that is before us is the joint resolution which emerged from the legislative deliberations and proceedings. It is brought here to the end that we may determine its proper construction, which of course is to be done by applying to it the rules applicable to legislation in general.

"The question presented is whether the resolution changes the substantive provisions of existing laws relating to transportation rates, and particularly whether rates which would be lawful under those laws are made unlawful by it."

In regard to the third paragraph which the Commission had construed as making a change "in the basic law," the Court stated at pages 667 and 668:

> "The third paragraph was construed by the commission as making a change 'in the basic law' as placing agricultural products in a 'most favored' class, and as justifying a reduction in the rates on deciduous fruits moving from California to eastern points, notwithstanding most of the carriers 'have not as yet made the fair return' for which § 15a of the Interstate Commerce Act makes provision as a means of securing the maintenance of an adequate transportation system. Indeed, it is apparent from the commission's opinion that it regarded this paragraph as requiring it to condemn the existing rates as unreasonable and unlawful, although, had they been considered independently of the paragraph, they must have been upheld as reasonable and lawful under the applicable sections 1(5) and 3(1), of the existing law.
>
> "We are of opinion that the commission's construction cannot be supported. The paragraph does not purport to make any change in the existing law, but on the contrary requires that that law be given effect. Nor does it purport to make unlawful any rate which under the existing law is a lawful rate, but on the contrary leaves the validity of the rate to be tested by that law."

The same conclusion is required here. The Commission, moved by the vocal agitation of certain spokesmen in the South, as it was by that of the farmers, has misconstrued a congressional direction to it to make an investigation as a change of the substantive law and a mandate as to the results which its "investigation" must produce, regardless of the evidence and of previously well established standards governing the administration of the Act.

It is submitted, therefore, that the Commission's orders rest upon a fundamental error of law and for this reason must be set aside.

POINT IV

The Commission's determination that the class rates are unlawful because not on a uniform level and that the class rates for transportation within official territory should be increased to approach uniformity is not supported by preliminary findings of fact or by the evidence, and the factual considerations stated by the Commission do not sustain its conclusion.

Apart from the legal misconceptions just discussed, the Court will find it difficult to deduce from the Commission's report a clear understanding of the factual basis of its ultimate conclusions and of the interim orders whose validity is here challenged. A large part of the voluminous report is devoted to discussions or descriptions of evidence and contentions with no indication as to how they have influenced the thinking of the majority upon the issues involved.

Starting from its viewpoint that the 1940 legislation changed the law and constituted a mandate to bring rates to a common level, the essence of the majority's conclusion is, of course, uniformity. There is no suggestion that if the Commission were considering the class rates for transportation within Official territory by themselves.

it would find that they violate Section 1(4) and (5)(a) because they are less than minimum reasonable rates. Certainly there is not a scintilla of evidence which would support such a conclusion. It is only in relation to the class rates within the South and West and from the South and West to Official territory that the majority of the Commission find the class rates within Official territory unlawful. They are unlawful in the Commission's view only because they are lower than the class rates in the South and West. The class rates in the South and West are in excess of maximum reasonable rates only because they are higher than the class rates within Official territory. The level of rates in each territory is made the standard of maximum and minimum lawfulness for the rates in each other territory and interterritorially.

The Commission's report gives no clear indication of the reasoning processes by which this central conclusion is arrived at from the various statements and so-called findings in the report. However, having in earlier points endeavored to show the Court that the report is lacking in preliminary findings essential to the ultimate findings made by the Commission and that the record contains no evidence to support such essential preliminary findings, we desire now to discuss the various points mentioned in the Commission's reports, in order to show that these various points either are incorrect or do not support the ultimate findings and orders. The various considerations of fact which can be deduced from the report as apparently relied upon by the Commission in support of its orders are the following:

(a) The computations of average costs of transportation.

(b) The existence of variations in the kinds of freight transported within the several territories, notwithstanding the fact that the same class rates prevail in the territories.

(c) The fact that the class rates are charged on only a very small proportion of the total traffic in the South and West and from those territories to Official territory.

(d) The fact that the average rate of return of the railroads in Official territory has been slightly less in recent years than the corresponding average figures for the railroads in the South and West.

A. The Commission's findings as to average cost of transportation and the evidence on this subject do not support the decision and orders.

The Commission's report leaves no doubt that the majority has attempted ~~to find~~ color of support for its decision in the evidence as to relative average costs of transportation in the several territories. This is indicated by the extended discussion of the matter of costs at pages 571 to 591 (R. 186-206) of the report and again at pages 692 to 694 (R. 307-309). It is shown by its conclusion at page 694 (R. 309): "Applying the foregoing principles to the issues in this proceeding, there is no doubt that, based on cost of service considerations, the differences in levels, schemes, and progressions of scales that at present occur in the several territorial class-rate structures here under review are not justified."

Commissioner Porter remarked, at page 717 (R. 332): "One is required to guess from the text of the report the reasons which impelled the majority to prescribe a uniform scale of rates throughout this area, because the basis or bases for this finding are not clearly stated. The emphasis placed upon it in the report indicates that the cost evidence is the principal basis for the finding."

Commissioner Barnard similarly said: "The only ground that I can conceive which impels the majority to condemn the class rates prescribed in the class-rate scales is the cost evidence prepared by members of our staff" (p. 728, R. 343).

The evidence as to the relative costs of transportation in the several territories consists of the testimony and exhibits of Dr. Ford K. Edwards, the Commission's chief cost analyst, the testimony and exhibits of various railroad statisticians criticizing Dr. Edwards' methods and figures and also the testimony and exhibits of Charles E. Bell, a railroad analyst and statistician of great experience and distinguished standing, retained by the State of New York. The testimony of Dr. Edwards will be found at the following pages of the record: R. 1553-1647, 1657-1665, 1728-1730, 1738-1750, 3505-3531, 4348-4395, 4853-4857. His exhibits are exhibits 2 to 4 inclusive, (R. 5139, 5141, 5423); exhibits 10 to 13 inclusive, (R. 5652, 5678, 5744, 5910); exhibit 195 (R. 11 257); exhibit 196 (R. 11 367). The testimony and exhibits of Dr. Edwards and Mr. Bell will be referred to more particularly in the discussion to follow.

The computations which the majority have accepted and employed are those of Dr. Edwards and the Commission has plainly rejected the criticisms made by other witnesses with regard to Dr. Edwards' methods and the conclusions to be derived therefrom. It is therefore necessary to examine Dr. Edwards' testimony and exhibits very briefly to see what his computations are and what they are not.

Cost accounting is a complicated business. Especially is this so in the case of railroads, where there are thousands of commodities transported and millions of different movements and operations which produce the total costs to be defrayed by total revenues. Cost computation, as the term is employed in this connection and has been used throughout this proceeding, consists not really in an ascertainment of actual costs of particular movements or railroad operations, but rather in the apportionment as between hypothetical movements of the many items of total expense which the railroads incur and which appear upon their books, kept in accordance with the accounting regulations prescribed by the Commission. These apportionments and the method to be employed in making them involve the exercise of judgment. It may not be the function of the Court to substitute its opinion for that of the Commission as to which method of apportionment is most likely to produce a figure of the character sought. It is the function of the Court, however, to inform itself of obvious errors in the method employed, which are bound to distort the results of the computations, and also to examine the Commission's use of the computations and the conclusions which it bases thereon to see whether the computations which the Commission has elected to accept are of such a sort as to support the inferences or findings of fact which the Commission has attempted to predicate thereon.

The first point in this connection is that while the Commission's orders herein relate only to class rates and that it is only in so far, if at all, as Dr. Edwards' computations indicate the relative costs of transporting class rate freight that the computations afford any proof whatsoever bearing upon the issues to be determined by the Commission, nevertheless *Dr. Edwards' studies do not indicate and did not purport to indicate the cost of handling freight transported at class rates.* This is the first reason why there is no evidentiary support in the record for the Commission's findings as to costs of transportation as a basis for its conclusion that the class rates should be on a uniform level and are unlawful to the extent that they are not uniform.

Moreover, the most that Dr. Edwards himself claimed for his computations is that from them one can obtain a figure supposed to represent the average of the total expenses of the railroads in Official territory allocated to the movement of a certain tonnage of freight in a certain type of car for a certain distance, regardless of the kind of freight or the freight rates paid thereon, and a corresponding figure for the same weight of freight in the same kind of car for the same distance in the South or in the West. The figure would be the same whether the freight moved at class rates or commodity rates. It would be the same regardless of the classification rating of the freight.

Therefore, where different freight rates are charged for the transportation of different kinds of freight having the same weight and loading per car, Dr. Edwards' computations would indicate nothing more than the average revenue which all shipments of all of these commodities for a given distance must produce. Since the rate structures in two territories are radically different, Dr. Edwards' computations would afford no indication whatever as to how the rates for the transportation of a group of commodities in one territory should compare with the rates for the transportation of the same commodities in another territory. The point can be illustrated by an example taken from one of Dr. Edwards' exhibits and from his testimony with reference thereto. Thus, in one of his computations, embodied in his Exhibit 2, at page 24 thereof, Dr. Edwards has computed a figure of 11.8 cents per 100 pounds as representing the average cost (cost level 11, embracing carload operating expenses, rents and taxes) for the transportation of 24.6 tons of freight in a box car for 300 miles in Eastern territory, excluding Pocahontas. Using this figure as illustrative of what his computations were intended to show, Dr. Edwards was examined and testified as follows:

> "Q. In order that we may be sure that we understand the conclusion to be drawn from the figures which are there shown, and from similar figures in the other table, I would like to ask you this question: assuming the correctness of your computations, and the method employed, is it the correct conclusion to be drawn from table 2 that if, looking for example at line 2, the average revenue per ton of all railroads in

Eastern territory, excluding New England and Northern Illinois, from freight handled by them in box cars for an average distance of 300 miles and an average loading of 24.6 tons, is 11.8 cents per hundred pounds, then the railroads have earned their costs on the basis of cost level No. 2?

A. That is true, Mr. McCollester, based on our first cost study put in.

Q. (By Mr. McCollester.) Now, if it should so happen, Dr. Edwards, that of freight having that average haul and that average loading per car in Eastern territory, some freight should produce revenue less than 11.8 cents per hundred pounds and other freight should produce revenue in excess of 11.8 cents per hundred pounds, the railroads would earn their costs, under cost level No. 2, if the average came out to be 11.8 cents per hundred pounds; is that correct?

A. Yes.

Q. Therefore, would you not agree, Doctor, that if it should appear that the average costs so computed for that length of haul and that loading in one section of the country were the same as in another, and that some freight in one territory yielded lower revenue than in another territory, while other freight yielded a higher revenue, the fact that the costs were equal would not indicate that all of the rates would have to be equalized, on all classes of traffic, in order to yield cost, would it?

A. That is right. There might be a different distribution of the transportation burden, as between different commodities in different territories.

Q. And that is in effect what you mean, is it not, when you say, in a somewhat different connection, I believe on page 3 of your Exhibit No. 2, that if some service pays less, other service must pay more?

A. Yes" (R. 3520, 3521).

In his Exhibits 10 to 13 (R. 5652-5910), Dr. Edwards presented various other computations and figures of so-called costs, the resulting figures reflecting certain modifications in his methods and in the estimates which he employed. However, an examination of the evidence will certainly show that all of the figures computed and submitted as costs were of the same essential character, namely, averages of allocations of total expenses for freight of a certain loading per car moving in a certain type of car for a given distance without regard to the kind of freight or the nature or amount of the freight rate charged thereon. The Commission's description of the cost studies at pages 571 to 591 (R. 186-206) makes this clear. At page 575 (R. 190) it is stated:

> "Territorial cost comparisons were based on the cost of furnishing a given amount of transportation service in the respective territories, taking into consideration every kind of traffic carried, whether handled in box, gondola, tank, stock, flat, or refrigerator cars, and covering 300 miles of haul."

On page 573 (R. 188), it was said:

> "The cost study gave no consideration to differences in the ability to pay of the various kinds of traffic handled in each territory, this being viewed as an element for consideration separate and apart from costs."

It is in the use of the computations and the deductions and conclusions derived therefrom that the majority of the Commission acted entirely arbitrarily and contrary to their own description and to Dr. Edwards' testimony as to what the cost computations disclosed.

In the summary on page 591 (R. 206), the majority of the Commission state:

> "The various comparisons of territorial costs reviewed hereinabove show that there is little significant difference in the cost of furnishing transportation in the South as compared to the East, excluding the Pocahontas territory."

On page 694 (R. 309), the majority conclude:

> "Applying the foregoing principles to the issues in this proceeding, there is no doubt that, based on

cost of service considerations, the differences in levels, schemes, and progressions of scales that at present occur in the several territorial class-rate structures here under review are not justified."

Here is where the majority of the Commission have plainly gone astray. The evidence shows and the Commission finds that there is a wide variation in the kinds and quantities of freight transported in the several territories. More than this, and even more important for this particular point, is the fact that the railroads in the several territories have radically different rate structures, as the result of which the transportation of different kinds of freight is expected to contribute in different ratios or proportions to the total expense of maintaining transportation systems. The record shows and the Commission finds, for example, that although the class rates are on a lower level in Official territory than in the South, there are commodity and exception rates in the South on the same freight which moves at class rates in Official territory which are as low as or lower than the latter. And the evidence shows, also, that in the South there are many commodity rates on raw materials and low-grade freight that are very much lower than the rates charged for the transportation of the same commodities by the railroads in Official territory (pp. 593-600, R. 208-215). For example, the rate for the transportation of pig iron from Pittsburgh to Buffalo, for 232 miles, is $3.61 a long ton. The rate for the transportation of pig iron from Birmingham, Ala. to Macon, Ga., for 247 miles is only $2.61. Assuming that 25 tons of pig iron were transported in a box car, in each instance Dr. Edwards' computation would produce a figure referred to by the majority as "cost". This figure would, however, be the same in each instance as if the commodity in the box car had consisted of 25 tons of high-grade machinery, charged fourth class rates. The fact that Dr. Edwards' computed figure for the northern movement might be approximately the same as that for the southern movement, no more proves that the freight rates on machinery are unlawful because the northern rate is lower than the southern rate than it proves that the freight rates on pig iron are unlawful because the northern rate is higher than the southern rate. In other words, so long as the rate structures are different in the two territories, an approximate equality of average cost figures proves nothing as to what the relative levels of the rates on particular commodities or groups of freight should be in the different territories.

The Commission has itself frequently held that computations of average costs cannot be accepted as proof as to what individual rates or groups of rates should be.

In the *Western Trunk-Line Class Rates,* 164 I. C. C. 1, at page 188, the Commission said:

> "We are not willing to assume that average unit line-haul costs on all traffic represent line-haul costs on class traffic * * *."

The Commission made also the following remark, previously quoted, which is especially pertinent here:

> "Class rates in w.t.l. territory appreciably higher than in official territory are justified also by the nature and volume of the articles moving under such rates in the respective territories. Many articles handled in enormous volume pay class rates in official territory, whereas in w.t.l. and southern territories they enjoy commodity rates lower than the corresponding class rates. *This in a large measure will account for and warrant relatively low class rates in official territory as compared with other territories. It is particularly pertinent in connection with the endeavor of certain interests to show that the average cost of all traffic in w.t.l. territory is not much, if any, above that in official territory.*" (Italics added.)

In *Commonwealth of Kentucky* v. *Ahnapee & W. Ry. Co.*, 213 I. C. C. 297, the Commission, at page 308, said:

> "In 1929, the year on which the figures are based, 78 percent of the traffic of the Louisville & Nashville consisted of products of mines and of forests, which are affected by their own peculiar transportation conditions. Only 13 percent of its traffic consisted of products of manufacturers, which require a much different service than coal and lumber. The Pennsylvania, on the other hand, derived only 64 percent of its tonnage from products of mines and forests, and manufactured articles accounted for about 28 percent of its total. *These differences cast doubt on the validity of average costs as an index to the comparative cost of handling class-rate traffic or to the proper level of such rates and indicate that comparatively little weight should be given to such costs in determining the proper level of class rates.*" (Italics added.)

The Commission's report here gives no indication why computations of average costs afford any more evidence as to the cost of handling or the proper level of class rates now than they did when the case last cited was decided.

In *Calif. Growers' & Shippers' Protective League* v. *S. P. Co.*, 129 I. C. C. 25, the Commission, referring to the cost studies before it in that proceeding, said (p. 52):

> "If these are accepted, the deciduous-fruit traffic is carried at a loss. *They are based on the average cost of handling all traffic, and can not be accepted as showing the cost of the deciduous-fruit tonnage. Nor. Pacific Ry Co.* v. *Dept. Public Works*, 268 U. S. 39." (Italics ours.)

In *Nor. Pacific* v. *Dept. Public Works*, 268 U. S. 39, Mr. Justice Brandeis, writing for the Court, said (pp. 43-44):

> "The Department's findings concerning operating costs rested largely upon deductions from data found

in published reports of the carriers and in their exhibits filed in this case. Instead of attempting to show by evidence, reasonably specific and direct, what the actual operating cost of this traffic was to the several carriers, the Department created a composite figure representing the weighted average operating cost per 1,000 gross ton miles of all revenue freight carried on the four systems and made that figure a basis for estimating the operating cost of the log traffic in Washington. This was clearly erroneous.

"A precise issue was the cost on each railroad of transporting logs in carload lots in western Washington, the average haul on each system being not more than 32 miles. In using the above composite figure in the determination of this issue, the Department necessarily ignored, in the first place, the differences in the average unit cost on the several systems; and then the differences on each in the cost incident to the different classes of traffic and articles of merchandise, and to the widely varying conditions under which the transportation is conducted. In this unit cost figure no account is taken of the differences in unit cost dependent, among other things, upon differences in the length of haul; in the character of the commodity; in the configuration of the country; in the density of the traffic; in the daily loaded car movement; in the extent of the empty car movement; in the nature of the equipment employed; in the extent to which the equipment is used; in the expenditures required for its maintenance. Main line and branch line freight, interstate and intrastate, car load and less than car load, are counted alike. The Department's error was fundamental in its nature. The use of this factor in computing the operating costs of the log traffic vitiated the whole process of reasoning by which the Department reached its conclusion."

See also *Baltimore & O. R. Co. v. United States*, 298 U. S. 349, 380.

Commissioner Porter in his dissenting opinion effectively pointed out the unwarranted and arbitrary nature of the Commission's action in basing its decision upon cost computations when he said, among other things (p. 717, R. 332):

> "The cost evidence was prepared by members of our staff. It does not even purport to reflect the actual or relative costs of transporting class-rate traffic in the different rate territories. The territorial cost comparisons were based on the cost of furnishing a given amount of transportation service in certain territories selected by our cost section on traffic handled in different types of equipment, such as box, gondola, tank, stock, flat, or refrigerator cars. Class-rate traffic is not transported exclusively in any type of equipment, and although a substantial quantity is moved in boxcars the volume of class-rate traffic transported in boxcars is much less than the volume of traffic transported in that type of equipment at exception or commodity rates. It is thus clear that the cost evidence does not afford a basis for a finding of the actual or relative costs of class-rate traffic in the various territories."

The misuse by the majority of the cost computations and the error and injustice produced by the principal reliance which they have placed thereon is emphasized when the real character of the cost computations themselves is further analyzed and the weaknesses and fallacies therein are considered. It is submitted that other features of the cost computations place them beyond the limits within which the Commission's judgment upon the evidence should be accepted by the Court.

First, the computations themselves of necessity involved assumptions and estimates whose validity is seriously open to question. They are so much the results of approximation that we submit the results cannot properly be made the basis of a drastic order requiring an increase of many millions in the freight charges to be paid by the shippers in Official territory. On this feature of the computations, Commissioner Porter said (p. 717, R. 332):

> "The report does not show, except in nebulous fashion, that the cost figures represent apportionment of totals, based on estimates; that they involve many assumptions and acts of judgment; and are not computations from direct, original cost figures for particular movements. These, however, are the facts. It omits evidence showing that 59 out of 117 items of basic data used in the studies were estimated, and that 458 out of 500 sequences were wholly or partly estimated. It fails to disclose clearly that when making the studies it was assumed that the consist of the traffic is the same in the different territories, when the fact is, as I have pointed out, that the traffic consist differs widely in the respective territories. The result is that theoretical costs are produced, based upon assumptions which are not facts, and upon comparisons of unlike things."

Second, the computations of costs cannot be matched with the rates prescribed or when so matched do not support the Commission's ultimate findings. It seems obvious that to be pertinent to a determination as to rates, the average cost figures relied upon should be averages for the same railroads or groups of railroads for which rates are prescribed. Here the order attempts to bring about an increase in the class rates for all railroads in Official territory and a reduction for all railroads in Southern territory on the basis of ultimate findings that the class rates for each territory as a whole are unjust and unreasonable and are unduly preferential and prejudicial. To the extent, if at all, that computations of average costs would be relevant to such ultimate findings, it seems plain that they would have to be averages for all railroads in each territory affected by the orders.

Dr. Edwards, however, in his initial computations did not group the railroads whose statistics he averaged in accordance with the rate groups. Instead, he excluded from the statistics for Official territory those of the so-called Pocahontas Lines. His explanation was that the traffic of the Pocahontas Lines is so predominantly coal that their statistics should be separated from those of other railroads. However, the Pocahontas lines traverse Official territory and they charge Official territory class rates. The Commission's orders would require a 10 per cent increase in their class rates. Moreover, the evidence shows that there is no such difference between the Pocahontas lines and other important railroads in Official territory in the matter of the proportions of coal traffic to total business as obtain between some of the railroads which are included in the Southern group for the computation of average costs for that territory (R. 3732-3734; Exhibits 166, R. 10454, 225-27, R. 11829, 11831, 11832).

The matter is important in view of the weight which the Commission in its report has attached to comparisons of average costs, as indicated by its conclusion on page 694, that

> "based on cost service considerations, the differences in levels, schemes, and progressions of scales that at present occur in the several territorial class-rate structures here under review are not justified"

and in view of its finding on page 591 (R. 206) that it is only if Pocahontas territory is excluded

> "that there is little significant difference in the cost of furnishing transportation in the South as compared to the East."

The exhibits show and the Commission correctly finds on page 591 (R. 206) that

> "If the Pocahontas territory is included with the East, the costs for the South, based on the year 1939, are between 3 and 6 per cent above those for the East."

It may be remarked further, that since the class rates in a large part of New England are differentially higher than the class rates elsewhere in Official territory, the correct comparison, especially in the case of the appellant States, would be of the average costs of transportation for all lines in Official territory other than New England with the averages for the railroads in the South. No such figure has been computed by Dr. Edwards, but since the costs for New England are somewhat higher than those for the rest of Official territory, it is plain that the average of the costs for Official territory other than New England would be more than 3 to 6 per cent lower than the average costs for the South.

In the third place, the Commission's orders require a 10 per cent increase in the class rates in Official territory for the purpose of equalizing them, not only with the class rates in the South but also with the class rates in the West. However, if costs are to be a standard, the Commission's own findings as well as the evidence require that the class rates in Official territory should be substantially lower than those in the West. The majority of the Commission make no finding whatever that there is even approximate equality of costs between Official territory and the West. On the contrary, they find, at page 591 (R. 206), that if Pocahontas territory is included in Official territory, the average costs for Official territory, based upon the period 1930 to 1939, were 18 per cent lower than those in the West. Certainly with this difference it cannot be said that the evidence as to costs justifies a finding that the rates in Official territory are unlawful because not uniform with those in the West.

We will not burden the Court with criticisms of the details of the methods of computation, some of which are summarized by the Commission in its report. One further feature of the computations should, however, be brought to the Court's attention as an additional indication of the arbitrary character of the Commission's orders in so far as they purport to be predicated upon the cost figures. This is the fact that the average computed figures which are presented as those for Southern territory reflect the results of favorable railroad operations which are actually performed in Official territory. The reason why this is so is that the Louisville & Nashville and Illinois Central are grouped as Southern railroads for accounting purposes and their figures are included in the Southern averages (R. 3754-3760, Exhibit 166, part 1, R. 10454). But their relatively low costs, which bring down the Southern averages, are due to the transportation of coal, a large part of which takes place over their lines in Official territory (R. 3760-3765). Dr. Edwards made some adjustments for this fact but was not able to obtain all figures necessary to separate the operations of these lines in Official territory from the balance in Southern territory. Consequently it is fair to assume that the figures which are presented as the average computed costs for Southern territory are really lower than the actual average costs for transportation over the lines on which the Southern class rates are charged. Similarly the averages for Official territory do not have the benefit of the lower figures which would doubtless be produced by the inclusion therein of the statistics relating to transportation performed by these railroads in Official territory.

In short, it is submitted that neither the majority's discussion of the evidence as to average costs nor the evidence itself in any way supports the ultimate finding that the class rates are unlawful because not uniform. Even less, if that be possible, do they sustain the requirement that the class rates in Official territory be increased.

B. The fact that there are differences in the kinds of freight transported within the several territories does not support the Commission's orders. On the contrary, the evidence as to so-called "consists" of traffic in the several territories precludes an ultimate finding that the class rates are unlawful because not uniform.

On page 694 (R. 309), the majority of the Commission say:

> "When analyzed in detail there are many more differences in the consists of traffic in these respective territories than when basic commodity groups, such as those used by us in the compilation of traffic statistics, are considered."

The majority concluded (p. 695, R. 310):

> "When analyzed in this light, the differences that exist in the consists of traffic in these respective territories are not so substantial or of such character as to warrant the present differences in class rates.
>
> "The record discloses that the class rates are substantially higher in southern, southwestern, and western trunk-line territories than in official territory, and that the interterritorial class rates between official and the other territories are substantially higher than those in official territory. These differences have resulted in a greatly diminished use of class rates and the establishment of numerous exceptions to the classifications, together with column and commodity rates, on a lower level than class rates. The great preponderance of traffic now moves on the exception, column, and commodity rates."

The view of the majority appears to be that since a single basis of class rates is in effect throughout each rate territory, notwithstanding the fact that many different kinds of freight are transported within the territory, therefore there should be uniformity of class rates throughout all territories.

The first answer to this suggestion is that in each territory the class rates are a part of a scheme of rates made up of class, commodity, and exception rates, prevailing generally throughout that territory, but that these schemes differ radically as between territories. The Commission's argument would be valid only if there were involved a unification of all rates—commodity, exception, and class rates—throughout all territories.

The second answer to the suggestion is that it is based upon incorrect premises, contrary to the evidence. On pages 611 and 612 of the report (R. 226, 227), the Commission presents tables showing the broad categories into which freight has been divided in terms of the percentages of each category in the respective territories. A comparison of the percentages, however, is no indication whatever as to the different kinds of freight and particularly as to the different volumes of freight making up the traffic in each territory. Any assumption of similarity of traffic or possible traffic as between the several territories which inevitably affect the rate structures and the rates which the railroads may profitably charge is disposed of by the Commission's own findings, such as the following (p. 537, R. 152):

> "Official territory greatly outranks all other territories in the proportion of semidurable and durable commodities which constitute the more important sources of the secondary metal supply. Depending on whether Michigan and Virginia are excluded or included, official territory is estimated to contain between 60 and 62 percent of the manufacturing establishments, between 44 and 46 percent of the hotel rooms, 59 and 61 percent of the office, trade, and other business structures, 50 and 52 percent of the dwelling units, 48 and 50 percent of the motor vehicles, 56 and 58 percent of the miles of wire in cable, and 64 and 66 per cent of the miles of all wire of telephone companies. This territory is somewhat less important relatively in its secondary metal reserves represented by railway plant and equipment, which is one of the

most important sources of secondary metal. Although this territory had between 28 and 31 percent of the miles of road, it does not greatly outrank the western trunk-line territory in this respect, although very much above all three of the other rate territories. However, class I railroads of the eastern district, which roughly coincides with official territory, owned between 41 and 46 percent of steam locomotives and a majority of the steel or steel underframe passenger-train cars in 1938. These roads also owned more than half of the steel and steel underframe freight-train cars if the Pocahontas region is included with the eastern district, and nearly 47 percent if it is excluded."

Exhibit 165 shows that in 1939 the railroads in Official territory handled 961,769,420 tons of coal and coke as compared with only 208,544,676 tons handled by the railroads in the South, and in the same period the railroads in Official territory handled 482,668,076 tons of other freight as compared with but 143,766,136 tons handled by the Southern railroads. Certainly these tremendous differences in the total volume of freight, and especially in the volume of highly profitable coal and coke traffic, render it impossible to conclude that there are such similarities in the consists of freight in the several territories as to require uniformity of class rates.

One important kind of highly profitable freight is iron and steel. Exhibit 165 (R. 3780, 10398) shows that in 1940, 83.86 per cent of the total tons of iron and steel articles of the entire country originated in the appellant States and only 6.65 per cent in the South. Iron and steel tonnage handled by the railroads in the appellant States amounted to over 62,000,000 tons and comprised over 15 per cent of the total traffic handled by these railroads as compared with 7,346,000 tons handled by the Southern railroads, which constituted 5 per cent of their total traffic.

These differences are the causes not the results, of the differences in the freight rates. Thus the record shows that 90 per cent of the glass and glass containers of the country are manufactured in Pennsylvania, West Virginia, Ohio, Illinois, and Indiana and that this is due to the abundance of coal, glass-sand, limestone, and sodas available in close proximity in these states. The existence of salt, coal, hydro-electric power or gas within easy access of each other in the North and not in the South has brought about a large production of heavy chemicals in the North (R. 3749).

The catalogue of differences in the kinds and volumes of freight produced and available to the railroads in the several territories could be extended at length from the evidence of record. Suffice it to say that the evidence fully supports the comment of Commissioner Mahaffie that

> "In a country so vast as this with its widely varied resources and differing transportation needs it seems to me a mistake to try to compel general equality in rates except to the exent equality is justified by transportation conditions" (p. 708, R. 323).

C. The Commission's orders are not supported by the references to the small proportions of freight moving at class rates in the South and West and interterritorially.

As has been previously remarked, one of the most significant facts in this proceeding, which, as we contend, negatives all basis for the Commission's orders, is the meagre proportion of freight in the South and West and from the South and West to Official territory on which the class rates affected by the orders are demanded. On page 696 and elsewhere in the report, the majority endeavor to turn this fact into a ground for their ultimate findings. They say, for example (p. 696, R. 311):

> "It is clear that the method of distribution of the rate burden between types of traffic now observed in southern, southwestern, and western trunk-line territories has resulted in rates so high that they have prevented the free movement of traffic *at the rates in issue*. This result is fully proved by the fact that numerous lower exception and commodity rates which move the great preponderance of the traffic and produce the great preponderance of the revenues in those territories, have been established." (Italics added.)

This is a most misleading and meretricious remark, in the sense in which it was evidently intended. It was perhaps hoped that the italicized words would be overlooked by the careless reader and that the impression would be conveyed that the rate structures have "resulted in rates so high that they have prevented the free movement of traffic." Of course if that were true, it would be a serious indictment of the rate structures. However, the fact that in the South and West an insignificant proportion of the freight transported moves at class rates proves nothing more than that the railroads in those territories have provided lower exception or commodity rates upon which the freight actually moves freely. Correctly construed, the statement is really nothing more than that the class rates in the South and West are merely "paper rates" and, therefore, do not result in violations of the Act since they are not *charged* because lower rates are available.

Moreover, if, as the majority would have it appear, one of the excuses for their orders is to stimulate an increased movement of freight at class rates rather than at commodity rates, it is apparent that the requirement that the class rates in Official territory be increased runs squarely counter to such a purpose. The reasoning of the majority is inconsistent with itself.

D. The fact that the average rate of return of the railroads in Official territory has been slightly less in recent years than the corresponding average figures for the railroads of the South and West does not support the ultimate finding of undue prejudice and preference in violation of Section 3 (1) or the finding that the present class rates in Official territory are less than minimum reasonable rates in violation of Section 1 (4) and (5) (a) and does not justify the orders requiring an increase in the latter rates.

On page 705 (R. 320), the Commission says that its finding that the present class rates in Official territory should be increased 10 per cent

> "is based in part upon a consideration of the returns from operation of the various respondents in the several territories as reported to us, which we have considered pursuant to stipulations of record. From those returns and the whole record we find and determine that the revenue needs of the carriers in official territory with respect to their class-rate traffic are greater than is the case as to the class-rate traffic of the carriers in the other territories described."

This is a statement that has been previously discussed in this brief. It simply does not make sense.

It is not clear from the language of the report just what figures the Commission referred to, but presumably they are taken from Statistics of Railways as reported by the carriers to the Commission and include the figures in the tables on pages 613 and 657 of the report (R. 228, 272). It is understood that rate of return means the per cent which the net railway operating income from all railroad operations in each territory bears to the total reported investment in railway property used in transportation service by the carriers in that territory plus cash and material and supplies. The figures in the two tables do not appear to correspond, since, for example, the rate of return for the Eastern district for the year 1941 is shown on page 613 (R. 228) as 3.62 per cent and on page 657 (R. 272) as 5.51 per cent.

In any event, however, just as computations of average costs do not afford proof of the cost of handling class rate freight or of the relative costs of handling such freight in the several territories, so the figures as to rates of return do not afford the slightest proof that the class rates in one territory are less remunerative than those in another or that "the revenue needs of the carriers in official territory with respect to their class-rate traffic are greater than is the case as to the class-rate traffic of the carriers in the other territories described."

In view of the much higher rates for the transportation of raw materials and low-grade freight in Official territory than in the South and in view of the tremendous volumes of coal and iron and steel and other freight moving in Official territory which is not available to the railroads in other territories, it is much more likely that the revenue needs of the carriers in Official territory from their class rate traffic are less than is the case in other territories.

There are other reasons why the majority's statement is wholly arbitrary and without any basis in finding or evidence. Thus there is no finding and no evidence that the figures of property investment, in relation to which the percentages are computed, are arrived at in the same way. There is no proof that the investments are equally proper and necessary. There is neither finding nor proof that they properly represent the values of property to be used as rate bases. Since the cost evidence is no proof of the actual costs of transporting class rate traffic, there is no basis for a finding that the class rates contribute greater or less net revenue in one territory than in another. There is no finding and no evidence that the differences in "rates of return" are not due to passenger traffic, less-carload freight, or freight moving at commodity or exception rates.

In short, the remark, page 705 (R. 320), that

> "the revenue needs of the carriers in official territory with respect to their class-rate traffic are greater than is the case"

in other territories, is gratuitous, arbitrary, and utterly unsupported by the evidence.

It is submitted, therefore, that such considerations as appear from the report to constitute the factual grounds upon which the majority rest their ultimate finding that the class rates are unlawful because not uniform in all territories are not valid and do not support its determinations.

POINT V

The orders, in requiring a 10 per cent increase in the class rates for transportation in Official territory, in view of the compensatory character of the existing rates, violate Section 15a(2) of the Interstate Commerce Act.

Section 15a(2) requires that the Commission "in the exercise of its power to prescribe just and reasonable rates" shall

> "give due consideration, among other factors * * * to the need, in the public interest, of adequate and efficient railway transportation service at the lowest cost consistent with the furnishing of such service."

It is not found, and there was certainly no evidence before the Commission that the class rates for transportation in Official territory were so low as not to be consistent with the furnishing of "adequate and efficient railway transportation service." On the contrary, as previously argued, the evidence and the Commission's findings demonstrate that the class rates are highly compensatory for the service furnished. Neither is there any suggestion that the service furnished in transporting class rate freight is not "adequate and efficient."

Hence, it is submitted that in ordering that these highly compensatory rates be increased, the Commission failed to obey the mandate of Section 15a(2), and denied to shippers and receivers in Official territory, shipping at class rates, the due consideration required by the Act of their need for railway transportation "at the lowest rates consistent with the furnishing of such service."

POINT VI

The orders are beyond the authority of the Commission, arbitrary and discriminatory in that they would require shippers and receivers in Official territory to pay increased freight rates for the benefit of the railroads in the South. The lower Court erred in not so deciding.

Although not expressly stated, one of the real reasons why the Commission, having decided upon uniformity, has required that it should be accomplished by increasing the level of the class rates in Official territory, is disclosed by several significant portions of the majority's reports.

At pages 607 to 608 of its first report (R. 222, 223), the Commission discussed the evidence bearing upon the effect on the revenues of the Southern railroads which would be produced by substituting the Official territory rates for the rates in the South; in other words, by bringing about equalization on the Official territory level. The Commission pointed out that a witness for the Southern railroads calculated that if the revenue per ton-mile of the railroads in the Eastern district produced by the rates charged by the carriers in that district for the year 1939 were applied to the traffic handled by the Southern railroads, this would bring about a reduction in their revenues of $40,403,665 for that year. The Commission's cost analyst, according to the report, reworked these figures, making certain adjustments, as the result of which he computed that the revenue loss would be $23,499,831, based on traffic handled in 1939.

On page 634 (R. 249), the Commission, in discussing the so-called Florida arbitraries, set forth a table showing the net railway operating incomes, rate of return and deficits as of three important Southern railroads, the Atlantic Coast Line, Seaboard Air Line, and Florida East Coast, for the years 1927 to 1940, inclusive, and remarked:

> "If these statistics are accepted at their face value, the carriers' need for additional revenues in the years shown is plainly indicated."

At page 696 (R. 311), the Commission said:

> "One of the principal contentions of southern and western respondents, and of certain industrial interests, is that the establishment of the eastern level of class rates in the South and West will require upward revisions of exception, column, and commodity rates in order that the railroads may recoup revenue lost from the reduced class rates. They show that many of the exception and column rates in the South and West are higher than the eastern level of class rates, and contend that establishment of the eastern class-rate level in those territories would require reductions of those exception and column rates which are higher than the eastern class rates, thereby further reducing respondents' revenues. These contentions are directed against the establishment of the eastern class-rate level in the other territories but are not an answer to the claim that the differences

between the intraterritorial and interterritorial class rates in and between the several territories are not justified by transportation conditions."

Thus it is apparent that the majority of the Commission adopted the expedient of ordering an increase in the class rates in Official territory in furtherance of their purpose "of bringing the several intraterritorial freight-rate structures under consideration closer together in level" (p. 703, R. 318) in order to minimize the revenue loss for the Southern carriers involved in so doing. In short, Official territory shippers would be compelled to pay increased freight rates to carriers in Official territory to prevent reductions in the revenues of the carriers in Southern territory.

The Commission has certain powers under the Act to deal with the freight rates "demanded or collected" of shippers. It may prescribe rates in the light of the revenue needs of the carriers demanding or collecting them. But certainly there is no authority granted to the Commission to find that carrier A must increase the charges which it makes to its shipper X, in order that carrier B may grant equal rates to its shipper Y without depleting its earnings.

Under the orders the Official territory shippers would be compelled to pay more, despite the profitableness of their present rates, to enable the shippers in the South to have equality which the Southern railroads themselves cannot afford to give them. This is discriminatory and arbitrary action.

POINT VII

The Commission's orders represent an attempt to alter economic and industrial conditions and for that reason are beyond the authority of the Commission.

Since the majority's decision and the orders are not sustained by preliminary findings of fact essential to a finding of a violation of the Act, and since the reasons which are given by the majority are wholly inconsistent or fail completely to afford logical support for the decision, it is appropriate to inquire further as to the real basis for the orders.

The circumstances in which the investigation was instituted and conducted cannot be ignored; we have referred to them at the beginning of this argument: the "ground swell of agitation", the "feeling * * * deeply rooted" as to "the basic troubles in the economy", to borrow the language of the Assistant Attorney General in argument in the lower court. We have the word of the Chairman of the Senate Committee on Interstate Commerce that

> "recently the President of the United States appointed a new Interstate Commerce Commissioner. He is the author of a study on freight-rate discriminations. The State of Alabama now has two Commissioners on the Interstate Commerce Commission and both of them are there * * * because of the request and suggestion of the Senator from Alabama." (Congressional Record, p. 5889, Vol. 84, Part 6.)

It has been correctly remarked that the alleged "industrial lag" of the South is "an economic question." Is it not probable that these members of the Commission who "are there * * * because of the request and suggestion of the Senator from Alabama" conceived that they were there to aid in meeting this "economic question"?

The testimony presented by the Southern Governors and the large part of the report devoted to the subject strongly indicate that the decision, which cannot be justified on transporation grounds, really reflects an effort to give effect to the economic theories as to how the "industrial lag" of the South is to be overcome. Although without factual support in the statistics and testimony of record, the method advocated by the "agitation" was to remove the difference in the levels of class rates and thus to encourage industry to shift from the North to the South.

This proceeding was used as the vehicle to accomplish this purpose. Thus, the majority have made their orders responsive to the testimony of Governor Holland of Florida, who after informing the Commission from the witness stand "that the Southern Governors' Conference has been behind the bringing of this case as its principal activity" (R. 2540), stated that he voiced the attitude of all Southern Governors, who had urged that "key industries, vital industries, be decentralized and spread out over vast stretches of the country" (R. 2541). He said:

> "It is our view that the taking of prompt action in this case is necessary so that these war industries will have uniform levels of rates so that at the end of the war they can convert to peacetime manufacture, both *to prevent maladjustment in labor population* and the like, and *to keep our nation from* getting back into the old rut, *the old situation of too many key industries in one region,* thus jeopardizing our own security and the peace of the world.
>
> "We feel that no American will say that such efforts to carry out *this new National Policy of distribution or scattering of industry* is other than in the immediate public interest. We feel as well that there is no better time to establish uniform class rates than right now" (R. 2541-2542). (Italics added.)

Governor Cooper of Tennessee also discoursed at length on "the economic ills of the South" and emphasized that "the plea of the Southern Governors * * * is a plea * * * for national economic stability" (R. 2432). Their demand for equality of class rates for the purpose of "scattering industry" is in accordance with the continuing policy of other southern spokesmen.

As Commissioner Eastman said in his concurring opinion in *Stoves, Ranges, Boilers and House-Heating Furnaces,* 182 I. C. C. 59, 74:

> "However, it is undeniable, I think, that in the past both southern manufacturers and southern carriers have shown a tendency to demand that the rates to the North be equalized in level with those within the North, on the ground that such equalization is commercially essential to the southern industries. It is a sufficient answer to say that it is not our province to equalize commercial conditions. However, the evidence in this case has served a useful purpose in making it quite clear that the southern manufacturers have certain advantages over their northern rivals, so far as operating and overhead costs are concerned, which would have to be taken into consideration if it were our duty to equalize commercial conditions through an adjustment of freight rates."

In the same case the majority said (p. 68):

> "the position of the southern interests is in effect that we should require the northern carriers to join with the southern carriers in joint rates from the South to the North sufficiently low to enable southern manufacturers to obtain an amount of trade in the North satisfactory to them. With this contention we can not agree. It is not within our power to equalize natural disadvantages of locations."

The courts also have held that the Commission has not been endowed with authority to order changes in freight rates for such a purpose.

Judge Parker in *Anchor Coal Co.* v. *United States,* 25 F. (2d) 462, in much cited language, said (p. 470):

> "It is perfectly evident * * * that, in reducing the rates from the northern field, and in directing the

> cancellation of the reduction from the southern field, the Commission was primarily concerned, not in fixing rates, but in fixing the differential which was to prevail between the two fields * * *. But it must be manifest that increasing the differential to meet such a situation [and the same would be true of decreasing a differential] is not regulation of rates, but regulation of industrial conditions under the guise of regulating rates. * * * it is in essence a regulation of industrial conditions through manipulation of rates.
>
> * * * * * * * * *
>
> "The Commission does not have the right * * * to regulate industrial conditions under the guise of regulating rates.
>
> * * * * * * * * *
>
> nowhere (in the Act) is it provided that * * * the Commission * * * may fix rates * * * with a view of placing competing producers upon an equality * * *."

In *Texas & Pacific Ry. Co.* v. *United States*, 289 U. S. 627, at page 637, the Supreme Court used the language previously quoted, in which it said:

> "A tariff published for the purpose of destroying a market or building up one, of diverting traffic from a particular place to the injury of that place, or in aid of some other, is unlawful; and obviously what the carrier may not lawfully do, the Commission may not compel." (Citing various authorities.)

See also *So. Pacific Co.* v. *Interstate Comm. Comm.*, 219 U. S. 433; *I. C. C.* v. *Diffenbaugh*, 222 U. S. 42; *United States* v. *Illinois Central Ry.*, 263 U. S. 515, 524.

In the situation here the orders would certainly have the effect of a tariff or duty. They would impose a heavy charge on the doing of business in the appellant states, with the purpose of encouraging industrialists to choose locations in the South or West. Such orders constitute an attempt "to regulate industrial conditions under the guise of regulating rates" and are invalid.

POINT VIII

To the extent that the orders rest on a finding of undue preference and prejudice in violation of Section 3(1) they are invalid because they do not leave the carriers an alternative as to the method of removing the rate differences.

It has been held that the very nature of the offense prohibited by Section 3(1) requires that the carriers shall have an alternative as to the method of removing the prejudice and preference, whether by increasing the preferential rates or reducing the prejudicial rates. And if the circumstances are such that the carriers cannot have an alternative, no violation of Section 3(1) can be found to exist. *Texas & Pacific Ry. Co.* v. *United States*, 289 U. S. 627, 650.

The only exception to this rule may be in an instance where the lower rates are less than minimum reasonable rates or the higher rates are in excess of maximum reasonable rates.

The Commission's ultimate finding that the class rates within Official territory are less than minimum reasonable rates is a nullity for the reasons outlined in Point I hereof.

And if it be argued that, although the class rates in Official territory are profitable for the railroads in that territory, nevertheless class rates at that level would be inadequate for the railroads in the South and West, this could mean only that there is no violation of Section 3(1), because it would demonstrate that the transportation conditions in the several territories are so different as to justify different rate levels.

Counsel for the Commission and certain of the other defendants, however, argued in the court below, as they will undoubtedly do before this Court, that where a violation of Section 3(1) is found to exist, the Commission is not required to allow an alternative but has authority to prescribe maximum or minimum rates for the purpose of removing undue preference or prejudice, although such rates may not be unjust and unreasonable within the purview of Section 1 of the Act. This argument rests upon an alleged distinction between orders under Section 3 and orders under Section 15, said to be suggested by the opinion in *Texas & Pacific Ry Co.* v. *United States,* 289 U. S. 627, and by that in *Youngstown Sheet & Tube Co.* v. *United States,* 295 U. S. 476. An examination of these decisions will show that the distinction, to the extent that any exists, is merely verbal and not one of substance.

Section 15(1) provides, in part, that whenever the Commission shall find any rate

> "unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial * * * the Commission is authorized and empowered to determine and prescribe what will be the just and reasonable * * * rate * * * to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged * * * and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist. * * *"

In the *Texas & Pacific* case, *supra,* the Court stated at page 650:

> "Where an order is made under § 3 an alternative must be afforded. The offender or offenders may abate the discrimination by raising one rate, lowering the other, or altering both. Compare *American Express Co.* v. *Caldwell,* 244 U. S. 617, 624; *United States* v. *Penna. R. Co.,* 266 U. S. 191; *Chicago, I. & L. Ry Co.* v. *United States,* 270 U. S. 287, 292; *Minneapolis & St. L. R. Co.* v. *Peoria & Perkin U. R.*

> *Co.*, 270 U. S. 580, 582. The situation must be such that the carrier or carriers if given an option have an actual alternative."

In connection with the first sentence of this statement, it inserted a footnote reading as follows (p. 650):

> "This is not true of an order pursuant to section 15(1) prescribing maximum or minimum or maximum and minimum rates; but the present orders were not issued under that section."

The *Youngstown* case involved the validity of an order of the Commission which required the carriers concerned to increase certain competitive coal rates because the existing rates were unreasonably low. The nature of the findings on which the Commission based its order is, in part, indicated in the Court's opinion on page 480:

> "In the first place the Commission here found the required minimum reasonable; in the second place, it had, after full investigation in this and the Ohio case, held the existing rate structure—built upon certain reasonable key or controlling rates by application of proper differentials—just and reasonable, and the ex-river rates here in issue, in contrast, too low. Comparisons of other rates in the same or adjacent territory, while not a conclusive test of reasonableness of a rate under investigation, have probative value. There was much other evidence bearing upon the character of the service and cost. The order of the Commission was based primarily upon the reasonableness of the minimum prescribed. The existing rate structure furnished support for the finding of reasonableness."

Reference to the Commission's decision, *Bituminous Coal to Youngstown*, 197 I. C. C. 617, 634, will show that it also made a finding that the maintenance of rates on a basis *less* than the prescribed minima would unduly prefer the points from which the rates found unlawful applied and unduly prejudice other coal origin points. The carriers attacked the Commission's order on two grounds. First, they contended that there was no evidence to support the finding that the rates involved were unreasonably low. The Court dismissed this contention. Then the carriers further contended that the order was a Section 3 order and that it was void because it deprived them of an alternative method of removing discrimination. In answer to this contention the Court stated at page 480:

> "3. There is no merit in the contention that the order was a § 3 order and invalid for failure to afford the carriers an alternative of raising the contested rate or lowering others to remove discrimination. It is true the Commission found prejudice to shippers all rail, but in essence the order entered was a § 15 order and not one made under § 3."

While the Court's opinion does not explicitly indicate such to be the fact, it would seem that the contention made in the *Youngstown* case that the order was a Section 3 order and that, hence the carriers were entitled to an alternative in removing the discrimination, was based upon the assumption that the Commission had erred in finding the rates in issue less than just and reasonable and that, consequently, if any violation existed it was a violation of Section 3(1). As we have seen, however, the Court found that there was ample evidence to support the finding of unreasonableness and the order requiring the establishment of prescribed minimum rates. Since the minima were prescribed under the authority conferred by Section 15(1), the order was referred to as a Section 15 order. In the *Texas & Pacific* case the Court expressly found that there was no basis for the exercise of the minimum rate authority conferred by Section 15 and that, consequently, the carriers were entitled to an alternative in removing the undue preference and prejudice.

Strictly speaking, there is no such thing as a Section 3 order. That section contains no provisions for the making of orders. It is Section 15 that confers authority upon the Commission to make orders requiring the carriers to cease and desist from unlawful acts. The nature of the order which the Commission may make depends upon the precise violation of the Act found to exist, which brings into play the Commission's authority to issue an order to accomplish its removal. For example, it has been the consistent practice of the Commission when it finds that a particular rate or group of rates is unreasonably high or low, in violation of Section 1, to prescribe the maximum or minimum reasonable rates thereafter to be observed. It is recognized, however, that ordinarily there is what is referred to as a zone of reasonableness between the extremes of the maximum and minimum rates permitted by Section 1. *United States* v. *Chicago, M. St. P. & P. Co.*, 294 U. S. 499; *Int. Comm. Comm.* v. *Inland Waterways Corp.*, 319 U. S. 671, 685.

It may happen, as in *United States* v. *Illinois Cent. R. R.*, 263 U. S. 515, and in the *Texas & Pacific* case, *supra*, that the different rates charged two competing shippers, both of which are within the zone of reasonableness, produce undue preference and prejudice, in violation of Section 3. In this event the only function of the Commission is to require the carriers to cease and desist from the discrimination by adjusting the rates to a non-discriminatory basis, and since the rates are within the zone of reasonableness the carriers must be given an alternative as to how the discrimination shall be removed. To deprive them of this alternative would be to deprive them of their right to adjust their rates within lawful limits. *United States* v. *Illinois Cent. R. R.*, 263 U. S. 515; *United States* v. *Chicago, M. St. P. & P. R. Co.*, 294 U. S. 499, 506. This is plainly what was meant by the Court in the *Texas & Pacific* and *Youngstown* cases when it referred to an order made under Section 3, namely, an order pursuant to Section 15(1), which would require nothing more than a removal of a violation of Section 3.

POINT IX

The Court below erred in failing to hold that the evidence does not support the orders which are to take effect in the postwar period, and that the Commission erred in refusing to reopen the proceeding to take evidence as to the present and probable future conditions.

The evidence before the Commission concerning competitive and industrial conditions as they might affect the issues in the proceeding was almost entirely confined to conditions as they existed in 1939 and prior thereto. At one of the final hearings this evidence was supplemented by evidence showing new industries which had located in the South in the year 1941 (Exhibit 219, R. 11676). The cost computations of Dr. Edwards were based upon statistics for the year 1939 and most of the railroad figures in the record were for that year. By stipulation at the oral argument, leave was granted to refer to certain statistics reported by the railroads to the Interstate Commerce Commission for subsequent years, but so far as appears from the report the only later figures cited by the Commission were the percentages of rates of return of the railroads for the years 1942 and 1943 (p. 613, R. 228).

As a consequence, most of the evidence before the Commission on which it could base its decision relates to the prewar era. Since then this country has undergone the tremendous economic and transportation upheaval produced by our participation in World War II, and the nation is still in the throes of another radical change of its economic, industrial and transportation structure resulting from the termination of the war and the reconversion of the country to an economy geared to postwar conditions.

During the course of the proceedings before the Commission, objection was made to the continuance of the investigation on the ground that it would be utterly unrealistic and unreasonable to assume that the evidence which was being presented, based upon conditions before the war and in the very early war years, would afford a fair indication of conditions which would confront the country and its transportation agencies when the war should terminate. Leading railroad executives and others testified that the war conditions as they had even then developed had already changed the movement of traffic and other transportation factors and that they could not predict what the conditions would be after the war (R. 1805, 2070-2080, 2087-2089, 2093, 2094).

In briefs after the conclusion of the evidence, it was again urged upon the Commission that the record would afford no proper basis for orders prescribing rates to take effect and be operative in the future after the termination of the war. When the Commission announced its decision and issued its orders, these contentions were renewed and the Commission was petitioned to reopen the proceedings for the purpose of taking evidence as to changed conditions which had thus far developed as a result of the war. These petitions were denied by the Commission.

Obviously, the Court may and should take judicial notice that the war has occurred; that the United States has participated therein; that the war brought about an almost complete change in our industrial production and in our internal economy and that in the early postwar period this country is facing both world-wide and domestic economic conditions different from those which obtained before the war. We submit that it should conclude that since the orders are based upon evidence as to conditions before the war and in its early stages, it cannot be assumed that they are responsive to the conditions in which they are supposed to take effect.

In reply it may be argued that in the nature of things the Commission's orders, since they must be based upon evidence, are always predicated upon facts in the past rather than in the future. This is so. But in normal times it may reasonably be assumed that conditions do not so rapidly change that the evidence as to the past may not be accepted as fairly portraying the conditions in which the orders are to operate. But in this case we do not have normal times. The Court must take judicial notice that wars produce such drastic disruptions and changes of economic needs and practices and of industrial processes that the past cannot be fairly assumed to be an indication of the future. We need only refer to the unlimited demand for goods of all kinds in the devastated areas throughout the world to suggest that in the immediate years ahead, when the Commission's orders would take effect, the commerce and industrial production of this country are likely to have an entirely different character and outlook than we have ever known before.

We have previously cited *Atchison, T. & S. F. Ry. Co. v. United States*, 284 U. S. 248, as presenting a parallel to the present case in that there the Commission had acted upon the assumption that a Congressional resolution calling for an investigation of freight rates because of a wave of agitation, changed the substantive law affecting rates. This same case likewise affords a controlling precedent upon the point here discussed. In that case it appeared that following the period covered by the evidence before the Commission there had occurred the nationwide depression of the early 30's. The Commission had been asked to reopen its proceedings for the purpose of receiving evidence as to the changed conditions produced by that depression, and it had been urged that the evidence did not support the order which was to take effect in such changed conditions. The Commission had declined to reopen. This Court held that this was error. It said (pp. 260-261):

> "There can be no question as to the change in conditions upon which the new hearing was asked. Of that change we may take judicial notice. It is the outstanding contemporary fact, dominating thought and action throughout the country. As the Interstate Commerce Commission said in its recent report to the Congress, 'a depression such as the country is now passing through is a new experience to the present generation.' The Commission also recognized in that report 'the very large reductions in railroad earnings which have accompanied the economic depression,' and stated that 'the chief cause of these reductions has been loss of traffic.' For 'in such depressions the railroads suffer severely. Their traffic is a barometer of general business conditions.'
>
> "It is plain that a record which was closed in September, 1928—relating to rates on a major description of the traffic of the carriers in a vast territory—cannot be regarded as representative of the conditions existing in 1931. *That record pertains to a different economic era and furnishes no adequate criterion of present requirements.*" (Italics added.)

We submit that the same conclusion is required here. The record before the Commission on which its orders are based "pertains to a different economic era and furnishes no adequate criterion of present requirements."

POINT X

The recent decision and order of the Commission in Ex Parte 162, *Increased Railway Rates, Fares and Charges, 1946*, and the general increases in their freight rates made by the railroads pursuant thereto, have completely altered the rate situation to which the Commission's orders in the *Class Rate Case* were directed and have made those orders obsolete and impossible of enforcement according to their terms so that they should be set aside and permanently enjoined.

The Commission's findings in the *Class Rate Case* were based upon evidence relating to conditions largely as they existed in 1939 and the early war years. Its orders, dated May 15 and October 30, 1945, found unlawful and ordered a 10 per cent increase in the class rates for transportation in Official territory which it referred to in terms as "the existing and current interstate class rates", the "existing applicable interstate class rates" and the "present current applicable" class rates. It ordered "the present rate" in the West and South reduced 10 per cent.

But those rates no longer exist and cannot be increased or reduced. The Commission's orders cannot operate upon the rates which it specified and found unlawful.

This is because of what has recently occurred in the proceeding referred to in the heading to this point, commonly mentioned as *Ex Parte 162*.

In the spring of 1946 the railroads of the country filed with the Commission a petition alleging that because of increases in their operating and other costs since January 1, 1946 their then existing rates were no longer high enough to supply them with adequate revenues to meet their expenses and provide a return on their property used for transportation. They therefore sought authority to increase all of their freight rates 25 percent, subject to certain maxima or exceptions with regard to the rates for the transportation of a few particular commodities.

The Commission by an interim report permitted the railroads to make temporary increases of approximately 6 and 11 percent in their rates for interstate transportation pending final determination. It then held extensive hearings, receiving a large amount of testimony as to increases in railroad costs and increases in freight rates required by the railroads to render their rates reasonable and to provide an adequate return on the values of their properties and also evidence of shippers and others in support of or opposition to increases in rates. On December 5, 1946 the Commission issued its final report and its order pursuant thereto. The Commission proceeded to its ultimate conclusion with the following preface:

> "We therefore pass to our ultimate findings and conclusions. Before stating them, we think the following observations should be made.
>
> There are here involved all the freight rates and charges, and all the passenger fares of the railroads and many other carriers of the Nation, large and small. What we do will directly affect production and distribution in the industries of the Nation, and the welfare of its various regions, as well as the transportation industry. It will have its effect upon the forces tending to economic stabilization or the reverse. We have accorded every reasonable opportunity for those in any way affected to be heard, while pressing the proceeding with as much speed as the size and complexity in detail of the proposals permitted. No case has ever received from us more earnest study."

Its report is far too voluminous to reproduce in this brief but pertinent excerpts from its findings and its order are set out as appendices B and C hereto.

The Commission's findings stressed the changed conditions and increases in costs since January 1, 1946 with which the railroads of the country were confronted.

By its order, the railroads were permitted to increase their class rates 25 per cent in Official territory (the maximum sought by the railroads to render their rates compensatory in the light of their increased costs), 20 per cent in other territories and 22½ per cent interterritorially. They were authorized to increase their other rates generally 20 per cent with limited increases in the rates for the transportation of certain commodities.

The consequence of this decision, so far as the present case is concerned, is three-fold: (1) the Commission has recognized and found greatly different conditions and factors affecting transportation rates from those in the light of which the decision and orders in this suit were made, (2) the establishment of rates pursuant to Ex Parte 162 has made the rates to which the orders were addressed non-existent, and (3) the effect of enforcement of the order in the *Class Rate Case* upon the present day rates would produce results which plainly were not contemplated thereby.

On this latter point, for example, if the order in the Class Rate Case were now given effect with regard to the rates resulting from Ex Parte 162, the consequence would be an increase of 37½ per cent in the class rates for transportation within Official territory over the rates in effect when the order was made in 1945, and an increase of only 8 per cent in the class rates for transportation within the South and West. This would be a very different result from that contemplated by the orders in the Class Rate Case at the time they were made.

Again in the Class Rate Case the Commission gave as its principal reason for its interim order and for bringing about its approach to uniformity by increasing the class rates in Official territory as well as by reducing the class rates in other territories, the comparatively lower rate of return upon property investment of the railroads in Official territory which the Commission evidently construed as indicating a greater revenue need. The whole purpose of Ex Parte 162, however, was to provide additional revenues for the railroads and the Commission in its report in that proceeding has discussed the comparative rates of return of the railroads in the several territories at great length. It is clear from the findings in Ex Parte 162 that by allowing an increase of 25 per cent in the class rates of the railroads in Official territory while permitting an increase of only 20 per cent in the corresponding rates of the railroads in the South and West, the Commission was seeking to equalize the rates of return on property investment of the railroads in the several territories. In any event, the Commission has taken comparative rates of return into account and has thereby altered the basic revenue situation upon which the Commission predicated its order in the *Class Rate Investigation* which would have required a 10 per cent increase in the class rates in Official territory and a reduction in other territories.

In the *Class Rate Investigation* the Commission attempted to bolster its order requiring a 10 per cent increase in the class rates for transportation within Official territory by a finding in its supplemental report that the class rates which it ordered increased were less than just and reasonable rates (p. 158, R. 477). Whether or not such a finding was justified by evidence relating largely to 1939, it is impossible to see how those rates increased 25 per cent, which was the maximum increase which the Commission permitted to be made pursuant to the decision in Ex Parte 162, can now be less than minimum, just and reasonable rates. Especially is this so since the present rates reflecting the 25 per cent increase are the maximum rates which the railroads in Official territory asked authority to establish and which the Commission has said represents the highest reasonable rates and since the Commission in Ex Parte 162 has found the increased rates to be just and reasonable.

Finally, on this point the interim orders in the *Class Rate Investigation* to which these suits are addressed were, according to the Commission's report, designed as an approach to that uniformity of class rates throughout the country which it was the aim of the Commission ultimately to achieve. This uniformity was to be based upon the mileage scale set out at page 704 of the Commission's report (R. 319). The Commission's action in Ex Parte 162, however, has made that mileage scale a relic of the past. It is so much lower than the class rates which the Commission has now permitted the carriers to establish that it cannot be assumed that the Commission longer intends it to be the basis of the uniform class rates ultimately to be established. Nor can it be said that it is intended that the mileage scale shall itself be increased by the amounts of the percentage increases permitted by the order in Ex Parte 162. Is it to be increased 20 percent, the amount of the increase permitted in class rates in Southern and Western territories, or is it to be increased to 25 percent, the amount of the increase in class rates authorized in Official territory? If either of these alternatives were adopted, the resulting rates would be vastly different from those which the Commission has permitted. On the other hand, if the scale were subjected to both increases, namely, 20 percent, as applied to the rates for transportation in Southern and Western territories, and 25 per cent, as applied to transportation in Official territory, it would cease to be a uniform mileage scale. Consequently, the ultimate uniformity contemplated by the decision in the *Class Rate Case* can now no longer be achieved on the basis found by the Commission in that case to be just and reasonable, and if there is to be uniformity, further findings as to the basis upon which such uniformity shall be accomplished are necessary. This being so, the interim orders, to which this suit is addressed, can no longer be deemed orders to accomplish an approach to the uniformity to be ultimately brought about on the basis of the mileage scale.

It is submitted, therefore, that the order in Ex Parte 162 and the making effective of a 25 percent increase in class rates for transportation in unofficial territory and a 20 percent increase in the class rates for transportation in western and southern territories have so altered the entire rate situation that apart from all other considerations it cannot now be assumed that the Commission's order in the *Class Rate Investigation*, which is the subject of these suits, is designed to take effect under such conditions. Nor can it do so by its own terms. Hence, it should be annulled and enjoined.

Conclusion

For the reasons set forth herein, appellants ask that the judgment of the court be reversed, that the Commission's orders be held unlawful, and that the case be remanded to the District Court with direction to annul, set aside and permanently enjoin the orders.

Respectfully submitted,

Appendix A

EXCERPTS FROM PERTINENT STATUTES

Interstate Commerce Act

Section 1 (4):

"It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor, and to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; and it shall be the duty of common carriers by railroad subject to this part to establish reasonable through routes with common carriers by water subject to part III, and just and reasonable rates, fares, charges, and classifications applicable thereto. It shall be the duty of every such common carrier establishing through routes to provide reasonable facilities for operating such routes and to make reasonable rules and regulations with respect to their operation, and providing for reasonable compensation to those entitled thereto; and in case of joint rates, fares, or charges, to establish just, reasonable, and equitable divisions thereof, which shall not unduly prefer or prejudice any of such participating carriers."

• • •

Section 1(5):

"(a) All charges made for any service rendered or to be rendered in the transportation of passengers or property, or in connection therewith, shall be just and reasonable, and every unjust and unreasonable charge for such service or any part thereof is prohibited and declared to be unlawful."

• • •

Section 3(1):

"It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however,* That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

* * *

Section 15(1):

"That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, or after full hearing under an order for investigation and hearing made by the Commission on its own initiative, either in extension of any pending complaint or without any complaint whatever, the Commission shall be of opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers subject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares, or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation, or practice is or will be just, fair, and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

* * *

Section 15a.(2):

"In the exercise of its power to prescribe just and reasonable rates the Commission shall give due consideration, among other factors, to the effect of rates on the movement of traffic by the carrier or carriers for which the rates are prescribed; to the need, in the public interest, of adequate and efficient railway transportation service at the lowest cost consistent with the furnishing of such service; and to the need of revenues sufficient to enable the carriers, under honest, economical, and efficient management to provide such service."

Transportation Act, 1940

Section 5(b):

"The Interstate Commerce Commission is authorized and directed to institute an investigation into the rates on manufactured products, agricultural commodities, and raw materials, between points in one classification territory and points in another such territory, and into like rates within any of such territories, maintained by common carriers by rail or water subject to part I of the Interstate Commerce Act, as amended, for the purpose of determining whether said rates are unjust and unreasonable or unlawful in any other respect in and of themselves or in their relation to each other, and to enter such orders as may be appropriate for the removal of any unlawfulness which may be found to exist: *Provided*, That the Commission in its discretion may confine its investigation to such manufactured products, agricultural commodities, and raw materials, and the rates thereon as shippers thereof may specifically request be included in such investigation."

Appendix B

EXCERPTS FROM FINDINGS IN EX PARTE 162

"From a consideration of the entire record in these proceedings, we conclude and find:

"1. It is requisite for the carrying out of the purposes of the national transportation policy, and the development, coordination, and preservation of a national transportation system adequate to meet the needs of commerce, the postal service, and the national defense, and in order that freight rates and charges shall be such as to move the greatest volume of traffic, while providing adequate and efficient transportation at the lowest cost consistent with the furnishing of such service, and to enable the petitioning carriers by railroad and by water under honest, economical, and efficient management to provide such service, that there be substantial increases in the basic freight rates and charges of the petitioners, and the continued maintenance of the present temporarily increased basis of passenger fares and charges. That the basic freight rates and charges, and passenger fares and charges, increased or authorized to be continued in the manner and to the extent herein found and approved in detail, will be just and reasonable, but that the full amount of the increases in the form proposed in the petition in Ex Parte No. 162 have not been shown to be just and reasonable, in respects not herein approved.

"2. Except as otherwise specifically provided in these findings or in the appendix thereto, all basic freight rates and charges of the petitioning rail and water carriers justly and reasonably may be increased for the future by 20 percent. By basic freight rates and charges are meant those now in effect, whether established by order of the Commission or voluntary act of the petitioning carriers (including rates held under investigation and suspension orders)—excluding, however, from such freight rates and charges as now in effect such portion thereof as represents the interim increases authorized by the report and order entered herein on June 20, 1946. Basic freight rates and charges include also rates prescribed by outstanding orders of the Commission, when and as the rates therein prescribed become effective, subject to any exceptions specifically noted herein."

• • • • •

"4. The following increases in the basic freight rates and charges for miscellaneous services will be just and reasonable for the future:

"Except as otherwise provided in appendix 1, rates on articles under the general commodity grouping of Manufactures and Miscellaneous, class rates and rates on less-than-carload and any-quantity traffic may be increased 25 percent within official territory, as defined in our prior (interim) report at page 743, 20 percent within and between other territories, and 22.5 percent between official territory and points in other territories."

* * * * *

"20. Appropriate orders for relief under sections 4 (1), 6, 217, 306, and 405 of the Interstate Commerce Act will be entered; except as specified in the following sentence of this finding our outstanding orders will be modified accordingly. As the effectiveness of our order in *Class Rate Investigation, 1939,* docket No. 28300, is now stayed and enjoined, we do not hereby in any manner suspend or supersede, or modify or affect the findings and order entered in that proceeding."

* * * * *

"APPENDIX 1

"Basic freight rates, whether class or commodity, and charges, on the commodities hereinafter specified, may be increased in the amounts and in the manner set forth as to each commodity class or group. The commodity group numbers (or commodity class numbers) used in this appendix, and throughout the entire report and order, for convenience, are those specified in the order of Division Four of November 22, 1927, *In the Matter of Freight Commodity Statistics,* which was in effect at the date of the submission herein, although a new list of commodity classes with articles assigned thereto has been promulgated by order of Division One, September 24 and October 16, 1946, to become effective January 1, 1947. They are intended generally to cover the items customarily included by the carriers in their reports to the Commission under each numbered description, as of the date for the submission."

Appendix C

INTERSTATE COMMERCE COMMISSION'S ORDER IN EX PARTE 162

"ORDER

"At a General Session of the INTERSTATE COMMERCE COMMISSION, held at its office in Washington, D. C., on the 5th day of December, A. D. 1946.

"EX PARTE NO. 162

INCREASED RAILWAY RATES, FARES, AND CHARGES, 1946

"EX PARTE NO. 148

INCREASED RAILWAY RATES, FARES, AND CHARGES, 1942

"*It appearing,* That further supplemental petitions have been filed, further hearings have been held, and parties have been heard in oral argument and upon briefs filed October 25, 1946;

"*And it further appearing,* That the Commission, on the date hereof, has made its report in these proceedings containing its findings of fact and conclusions thereon, which said report, together with the reports heretofore made in these proceedings, are hereby referred to and made a part hereof;

"*It is ordered,* That the increased freight rates and charges therein authorized shall supersede and be in lieu of the emergency increases authorized in the prior report of June 20, 1946. The authorized increased rates and charges may be made effective during the period from January 1, 1947 to February 28, 1947, upon not less than five days' notice to the Commission and to the general public, by filing and posting in the manner prescribed in the Interstate Commerce Act;

"*It is further ordered,* That outstanding unexpired orders in other proceedings are hereby modified so as to permit the increases in freight rates and charges herein authorized to be established; *Provided,* however, that the provisions of this paragraph shall not be construed to suspend or supersede or modify or affect the findings and order entered in *Class Rate Investigation, 1939,* Docket No. 28300, the operation of which is stayed by court order;

"*It is further ordered,* That rates, increased as authorized herein, within official territory from and to border points, may be applied as a minimum on interterritorial traffic through such border points to the extent necessary to conform to the provisions of section 4(1) of the act, in like manner as was authorized in the prior report of June 20, 1946;

"*It is further ordered,* That the authorization contained in the report and order of June 20, 1946, respecting increased rates on iron ore to the upper lake ports and increased handling charges on iron ore at those ports, is hereby cancelled effective January 1, 1947;

"*It is further ordered,* That the increase in passenger fares authorized by the order in Ex Parte No. 148, dated January 21, 1942, as modified by the order in Ex Parte No. 148, dated October 20, 1945, be, and it is hereby, continued in effect without expiration date;

"*And it is further ordered,* That all tariffs or supplements changing rates or charges under the authority of this order, which rates or charges are now maintained or held in force by virtue of outstanding orders of the Commission, shall bear on their title pages specific reference to this order."

I. General comments on opposing briefs 2

II. Points which are unchallenged in the opposing briefs require reversal of the District Court's decision and a decree annulling the Commission's orders 4

III. The argument of appellees that the 1940 amendments did not change the substantive law, except to enlarge the list of those as to whom undue prejudice and preference was prohibited, does not support the Commission's orders, but instead only emphasizes the legal error inherent in the decision of the Court below and in the Commission's action, since it is clear that the Commission, and certainly the lower Court, erroneously regarded the 1940 legislation as changing the law 7

IV. Appellees' argument that the findings of the Commission, claimed to sustain its orders, were supported by substantial evidence is unsound both because the argument fails to distinguish between rates which are published but not charged and rates which are actually charged for transportation and also because, in fact, the Commission did *not* make the findings suggested, so that appellees' argument is really that this Court, in order to sustain the Commission's orders, should accept their view of certain evidence and make findings which the Commission declined or failed to do 13

  A. The differences in the levels of the class rates do not represent differences in the rates charged or in the rates under which "Movements" of freight occur 13

  B. Since it is not the function of the Court to make findings to sustain the Commission's orders when the Commission itself failed to do so, appellees' contention concerning and their references to the evidence, are irrelevant here since the Commission has properly not regarded the evidence as justifying findings 16

PAGE

C. Appellees' argument that the "higher class rates have impeded the development and movement of class rate traffic within Southern and Western Territories and from these Territories to Official Territory" is both invalid in itself and as a claim that the differences in class rates have caused substantial injury to the South and West is negatived by the Commission's findings 29

D. The decision of the lower court and the Commission's orders cannot be sustained by the computations of comparative costs for transportation in the several territories as contended by the appellees 32

E. As to the differences in the consists of traffic.. 34

F. As to the comparative levels of the commodity and exception rates 36

V. Appellees' argument that "interterritorial rate problems are insoluable without uniformity of class ratings and rates" is an argument against the validity of the interim orders in issue here .. 38

VI. The arguments in the briefs for appellees confirm appellants' contention that the real purpose of the Commission's orders was to bring about a redistribution of industry. Far from sustaining the validity of the orders, the argument requires that they be held unlawful 39

VII. Despite arguments to the contrary in the briefs for some appellees, the conclusion is inescapable that the Commission's orders rest, in the last analysis, upon an erroneous conception of the effect of the amendment to Sections 3(1) and 5(1) of the Transportation Act, 1940 42

Conclusion 43

REPLY BRIEF FOR THE STATES OF NEW YORK DELAWARE, INDIANA, MARYLAND, MICHIGAN, NEW JERSEY, OHIO, WISCONSIN and THE COMMONWEALTH OF PENNSYLVANIA, APPELLANTS.

In large part the main brief for these appellants contains their answers to the arguments in the briefs of the several appellees. In other words, if the Court, after reading the briefs of appellees, will again turn to the main brief of these appellants, it will there find their replies to most of the arguments by which it is sought to persuade the Court that the decision of the lower court and the Commission's orders should be upheld.

However, both in regard to the general tenor of the briefs for the appellees and also in regard to certain contentions which are advanced therein, a few further comments may be pertinent and helpful to the Court.

I

General comments on opposing briefs.

There are several features which are common to the briefs of all the parties who here seek to sustain the lower court's decision and the Commission's orders.

A. No serious attempt is made by any appellee to argue that the class rates charged for transporting freight between points in Official territory, when considered as compensation for the service for which they are paid and judged in relation to the rate structure and conditions in Official territory, are unreasonably low in violation of Section 1. Nor could such an argument be made in the light of the Commission's preliminary findings and of the record, which show that the rates are highly profitable. Indeed, the perfunctory ultimate finding included by the Commission in its supplemental report that the intraterritorial class rates within Official territory are less than just and reasonable rates in violation of Section 1(4) and (5)(a) of the Interstate Commerce Act (Petition, p. 158) is hardly referred to in appellees' briefs. To the extent that any attempt is made to support this perfunctory ultimate finding, it rests entirely upon a comparison of the Official territory class rates with the class rates published by the carriers in other territories rather than upon any claim of inadequacy of the class rates within Official territory considered by themselves.

B. The arguments in support of the Commission's authority to order an increase in the class rates within Official territory rest practically entirely upon contentions as to its power to require the removal of undue prejudice and preference (referred to generally as "discrimination") in violation of Section 3(1). The discussion of these contentions, however, and frequent remarks in the briefs calmly assume the existence of discrimination, whereas one of the principal questions before the Court is whether the Commission's reports contain preliminary findings of fact essential for the support of an ultimate conclusion that in charging the existing class rates, the railroads in Official territory violate Section 3(1) of the Act. It is obviously futile to argue that the Commission has the broad powers claimed for it to remove discrimination unless its reports and the record support an ultimate finding that discrimination exists.

C. Although all appellees urge that the Court is bound by the findings of the Commission, a large part of the discussion in the opposing briefs is devoted to evidence plainly rejected by the Commission and not embodied in findings in its reports and constitutes argument which might be urged before the Commission but is not properly addressed to this Court.

II

Points which are unchallenged in the opposing briefs require reversal of the District Court's decision and a decree annulling the Commission's orders.

Repeating to some extent but in different form the foregoing comments, the Court, after reading appellees' briefs, will note that they leave unchallenged the following grounds of attack upon the Commission's orders, which alone call for their annulment.

A. Although the Commission's orders requiring an increase in the class rates charged for transportation within Official territory rest in part upon an ultimate perfunctory finding that these rates are less than minimum reasonable rates in violation of Section 1(4) and (5)(a), no denial is or could be made that:

(1) There is no finding that the present class rates for transportation within Official territory are noncompensatory;

(2) There is no evidence which would support such a finding;

(3) The cost evidence heavily relied upon by the Commission indicates that the class rates are highly profitable to the railroads of Official territory;

(4) There is no finding and no evidence which would support a finding that the existing class rates in Official territory threaten a rate war which would deplete the revenues of the carriers and impair their ability to render adequate service or would destroy other carriers;

(5) There is no finding and no evidence to support a finding that the class rates in Official territory actually charged for the transportation of shipments moving within that territory, although lower than the

corresponding class rates published in the tariffs of the Southern and Western railroads, are really lower than the freight rates actually demanded or charged by the railroads in the South and West for the transportation of the same freight either within those territories or from those territories to Official territory.

B. To the extent that the Commission's orders requiring an increase in the class rates charged for transportation within Official territory purport to rest upon an ultimate finding of undue preference and prejudice in violation of Section 3(1), no denial is or could be made in the opposing briefs that

(1) There is no preliminary finding and no evidence which would support a finding that the differences in the class rates represent differences in the freight rates actually demanded or charged for transportation within Official Territory and for transportation of the same freight from the South and West to Official territory, or that the evidence shows that all but an insignificant portion of the interterritorial movement has the benefit of exception or commodity rates and thus negatives the possibility of such a finding;

(2) The findings made by the Commission and embodied in its reports with respect to the evidence as to the effect of freight rates upon the shipments of individual shippers, their ability to reach common markets, the development of their businesses, and the industrial growth of the South and West, represent findings by the Commission that the differences in the levels of the class rates have not been the cause of substantial injury to the South or to the West as territories or to individual shippers or industries therein;

(3) The Commission's orders requiring an increase in the class rates in Official territory, which are already profitable, are inconsistent with and violate the

requirement of Section 15a (2) that the Commission, in the exercise of its power to order just and reasonable rates, shall "give due consideration, to the need * * * in the public interest, of adequate and efficient railway transportation at the lowest cost consistent with the furnishing of such service;"

C. The cost computations on which the Commission placed substantial reliance do not represent the costs of handling class rate freight, but are averages of the costs of handling all freight;

D. Although the Commission purports to predicate its orders requiring an increase in the Official territory class rates in part upon the fact that the average rates of return of the Official territory railroads upon their property investments have been slightly lower than those of the Southern carriers, there is no finding and no proof that this is due to the class rates or that an increase in the class rates would increase the rate of return.

Apart from all other angles of the case, it is submitted that these fundamental points alone, which appellees do not appear to challenge, constitute sufficient grounds for enjoining the Commission's orders because there can be no valid ultimate finding of violations of either Section 1 or Section 3 in the absence of the foregoing preliminary findings, which are completely lacking and for which there is no evidential basis in the record.

III

The argument of appellees that the 1940 amendments did not change the substantive law, except to enlarge the list of those as to whom undue prejudice and preference was prohibited, does not support the Commission's orders, but instead only emphasizes the legal error inherent in the decision of the court below and in the Commission's action, since it is clear that the Commission, and certainly the lower court, erroneously regarded the 1940 legislation as changing the law.

The brief for the United States and the Interstate Commerce Commission apparently seeks to convey the impression that there is substantial agreement between appellants and appellees on major issues and controlling principles and that, since this is so, the conclusion contended for by appellees must be the correct one. But this is plainly a *non sequitur.* If there is agreement on certain important propositions of law, this only emphasizes the conflict between the parties as to their application here. And it is submitted that the application made and the inference sought to be deduced by appellees from these propositions as to which agreement is claimed are unsound and in contravention of the facts.

Perhaps the principal question of law is whether the amendment made to Section 3 of the Act and the Ramspeck Resolution wrought a major change in the applicable law and rendered rates unlawful which were entirely law theretofore.

It is said in the brief for the Commission and the United States, at pages 66 ff., that by the 1940 amendment to Section 3 and the so-called Ramspeck Resolution, Congress did *not* and did not intend by legislative fiat to require nationwide uniformity of class rates and did not impose a mandate upon the Commission to bring about such uniformity or an approach thereto. With this we agree. It is, moreover, the position of these appellants that the 1940 amendment to Section 3 did not change the requirements for a determination that rates produce undue prejudice and preference in violation of Section 3 but merely added regions, districts, or territories to the list of parties or things between which discrimination was prohibited. Indeed, had it not been for the decision of this Court in *Texas & Pacific Ry. Co.* v. *United States*, 289 U. S. 627, narrowly construing the word "locality", these appellants would be inclined to the view that the 1940 amendment was unnecessary and it is their conception that it merely added language to give to Section 3 the effect which it was generally assumed that it already had prior to the decision in the *Texas & Pacific* case. Hence as we argue, and as the United States and the Commission apparently agree, there was no more a mandate upon the Commission to bring about nationwide uniformity of class rates after the 1940 amendment than there was before. Class rates were no more unlawful because on different levels in different territories after that amendment than they were prior thereto. We contend, further, that to sustain a determination of undue prejudice and preference as between regions, districts, and territories the same general character of preliminary findings and of evidence was required as had always been held essential to sustain a determination of a violation of Section 3(1) as it was prior to 1940.

But the important point is not whether counsel for appellants and counsel for appellees now by their briefs agree that the 1940 legislation worked no fundamental change in the law. The question is whether the court below and the Commission conceived that the law had been changed and predicated their decisions on such a conception.

As for the lower court, it is plain from its opinion that it regarded the law as changed and based its action in upholding the Commission's orders upon its view that rates which were lawful before were rendered unlawful by the 1940 legislation and that such legislation empowered the Commission to declare rates in violation of Section 3 of the Act without preliminary findings of facts previously held to be essential to such a determination. The lower court, in its opinion said (R. 1432, 3):

> "We think Par. 3(1) as thus amended does add new factors to be taken into account by the Commission in determining, under the old and well recognized principles which were before guides to decision in such matters, whether existing rates are unlawful. These new factors are whether such rates are unjustly preferential, prejudicial and discriminatory as between regions, districts or territories; and, in our opinion, Par. 3(1) now empowers the Commission to find such rates unlawful even though they would have been lawful in the light of all relevant considerations before the amendment. We may, indeed, take it for granted that they were lawful previous to the amendment since they had been in the main the result of comparatively recent investigations and orders of the Commission."

It is equally clear that the Commission was moved to its determination by a belief that the 1940 legislation had changed the essentials of a finding that Section 3 is violated where the prejudice and preference alleged are between "territories". and that in such a situation it had received a mandate different from any under which it had previously functioned. The Commission said (pp. 691-692, R. 306-307):

> "Considering the breadth of the language used in the amendments here under consideration, the evils

> sought to be cured by this legislation, the history of the times when the law was amended, as well as the statements of the legislators as to the purposes of the amendments—all proper aids of statutory interpretation—it is clear that the main purpose which Congress had in mind was to bring about a greater degree of equalization, harmony, and uniformity in the different regional or territorial rate structures of the country."

And its view of the law as so amended, was stated by it, in language quoted by the lower court (R. 1433):

> "'By the amendment to the substantive antidiscrimination provisions of section 3(1) all discriminations in the form of undue or unreasonable preference or advantage, or undue or unreasonable prejudice or disadvantage, as between regions, districts, or territories, viewed as separate entities, were brought directly within the purview of the act along with all the other inhibitions previously included. We were then authorized and directed by the other provisions mentioned to remove any such discriminations found to exist in a proper proceeding. This means that *such discriminations as those mentioned* which result from differences in the methods of distributing the general rate burden in the several rate-making territories, or from any other cause, if not justified upon proper consideration of recognized elements of rate making *applied in the light of the amended law* are unlawful and should be corrected.'" (Italics added.)

This is certainly a statement of the supposed essentials of a determination that rates violate Section 3 far different from any previous interpretation of that Section. It had never been held before that rates were *prima facie* in violation of Section 3 because different, or that if the different rates resulted from "differences in the method of distributing the general rate burden", a determination that Section 3 was violated was required unless the rate differences were "justified upon proper consideration of recognized elements of rate making." On the contrary, it was the well settled law that mere difference was not discrimination, that differences resulting from differences in the rate structures *were* justified, and that there could be no determination of a violation of Section 3 without preliminary findings that the different rates were affected by and charged under substantially similar conditions and that the differences were the cause of substantial injury to the party alleged to be prejudiced or substantial benefit to the party claimed to be preferred.

But it is plain here that the Commission conceived that merely because on different levels in the different territories the class rates were at least *prima facie* unlawful and that the burden of proof was upon those who sought to defend them, notwithstanding that the Commission had itself prescribed the rates. It is plain also that the Commission conceived that because of the 1940 legislation it should hold the rates unlawful without any findings by it or evidence of facts such as had previously been held essential to a condemnation of rates as violative of Section 3.

In no other way can the Commission's finding of a violation of Section 3 be explained because of the obvious absence from the reports of findings of fact heretofore always regarded by the courts and the Commission itself as essential to such a determination.

Thus the Commission's report will be examined in vain for any finding that the difference in levels of the class rates has been or is the cause of substantial injury to Southern and Western territories, as such, and of substantial preference and benefit to Official territory.* Again, there is no finding that the class rates on their differing levels are charged for the transportation of the same or competing freight in the several territories and the Commission's findings clearly negative such an assumption. Neither is there a finding that the different conditions and considerations and different characters of the rate structures in the several territories, which led the Commission itself to prescribe the class rates on their present differing levels in each of the several territories, have changed so that there is now a substantial similarity of circumstances and conditions affecting the class rates.

It is submitted, therefore, that the agreement of counsel for the United States and for the Commission that the 1940 legislation did not change the substantive law as to the essentials of a determination of unlawful prejudice and preference in violation of Section 3 of the Act supports appellants' contention that the decision of the lower court and the orders of the Commission rested on errors of law.

---

* This point will be discussed further presently. It is pertinent to observe that counsel for the United States and the Commission agree therewith because at page 125 of their brief they recognize the absence of any such finding and endeavor to compensate for it by reference to evidence which they argue would have warranted such a finding.

IV

Appellees' argument that the findings of the Commission, claimed to sustain its orders, were supported by substantial evidence is unsound both because the argument fails to distinguish between rates which are published but not charged and rates which are actually charged for transportation, and also because, in fact, the Commission did *not* make the findings suggested, so that appellees' argument is really that this Court, in order to sustain the Commission's orders, should accept their view of certain evidence and make findings which the Commission declined or failed to do.

A. The differences in the levels of the class rates do not represent differences in the rates charged or in the rates under which "movements" of freight occur.

Beginning on page 86 of the brief for the United States and the Commission, there is discussion of what are referred to as the six major findings of the Commission which are claimed to support its conclusion that the conditions within the different freight rate territories do not warrant the existing differences in class rates. The first ten pages are devoted to tables and statements of figures to support the caption that "Class rates within Southern and Western territories, and from these territories to Official Territory, are much higher, article for article, than the rates within Official Territory."

We must remind the Court that all of these figures are figures as to the class rates published in the tariffs and do not represent comparisons of rates actually charged. This caution is necessary because the language of the brief, doubtless through inadvertence, may convey an incorrect impression in this regard. For example, on page 88, reference is made to "comparisons for interterritorial movements" and there are other references to the rates for "movements." Thus, it is said on page 88 that

> "On a movement of 800 miles within Official Territory, the table above shows that a rate of $1.60 per 100 pounds applies on first class traffic, while for the same distance in Southern Territory, the rate is $2.22."

This is entirely misleading, however, if it is construed as meaning that in the case of the commodity for the transportation of which for a distance of 800 miles in Official territory a rate of $1.60 is charged, the rate actually charged for transportation for the same distance in the South is $2.22. As pointed out in appellants' main brief, there is absolutely no finding and no evidence to support a finding that the differences in the levels of the class rates indicate the differences, if any, in the freight rates actually charged. Again, on page 91, referring to the fact that the Official Classification classifies at first class 2,092 items "each of which moves at a rate of 80 cents for a haul of 200 miles", it is said that in the Southern Classification "2,075 of these 2,092 articles are classified first-class, moving at a rate of $1.12 for 200 miles." There is, however, no finding and no evidence that if these 2,075 articles or any of them are shipped for 200 miles in Southern territory the freight rate charged thereon is $1.12.

The point here made is of great concern to these appellants. If it be the law that a difference in freight rates as between territories constitutes undue prejudice and preference in violation of Section 3 or renders the lower rates unlawfully low in violation of Section 1 and the higher rates unlawfully high in violation of the same section, then this can only be so with regard to the rates actually charged. The feature of the Commission's orders to which appellants primarily object is their requirement that the class rates for transportation within Official territory be increased 10 per cent. It would be grossly unfair, under a claim of accomplishing an approach to uniformity, to require shippers and receivers in Official territory to pay, in addition to their present rates, which are clearly profitable to the railroads, many millions of dollars of additional freight charges in increased rates which they actually pay in order to bring about equality with rates which shippers in the South and West do not pay because lower exception or commodity rates have been provided for them.

There follow at pages 98 to 127 examples of what are referred to as "specific class rate inequalities in concrete situations, of which, as the Commission found, there was 'abundant evidence' ".

The language quoted must obviously be intended to convey the impression that the examples cited were actually found by the Commission to afford "abundant evidence" of rate inequalities due to differences in the levels of the class rates in the several territories. Reference to the page of the record cited will show, however, that such an impression is not justified. At the page cited the Commission was discussion not the class rates, but the classification ratings and the differences in ratings of various commodities in the several territories. The Commission said:

> "Abundant evidence has been received showing that the differences in classification ratings compel shippers, in each of the classification territories, to pay on certain articles transportation rates that are relatively higher than the rates paid on the same articles by shippers in one or both of the other territories, considering present class rate levels in the respective rate territories."

Of course the Commission's interim orders, whose validity is challenged in these suits, were not directed to the classification ratings and the Commission made no order whatsoever with regard thereto, leaving the carriers to work out a revision of their classification ratings. Hence, the finding of the Commission, from which the words "abundant evidence" were quoted, had nothing to do with the issues here, which are whether the differences in the levels of the class rates result in undue prejudice and preference in violation of Section 3 and whether the rates are unjust and unreasonable rates in violation of Section 1. Indeed, after the language quoted the Commission went on to say

> "In fact, on many articles a shipper in a lower rated territory must pay higher rates than one in a higher rated territory, owing to differences in classification ratings."

In other words, although the first class rate in Official territory for a given distance may be lower than the first class rate for the same distance in the South and West, a shipper of a particular commodity in Official territory may actually pay higher freight rates than a shipper of the same commodity in the South or West because of the fact that the article is accorded a lower classification rating in the South or West than in Official territory. In other words, the difference in the levels of the class rates does not mean or cause a corresponding difference in the freight charges actually paid.

B. Since it is not the function of the Court to make findings to sustain the Commission's orders when the Commission itself failed to do so, appellees' contention concerning, and their references to the evidence, are irrelevant here since the Commission has properly not regarded the evidence as justifying findings.

Beginning on page 98 of appellees' brief, there are set out (with record references) a series of examples which are supposed to demonstrate "how discriminatory and unreasonable the class rate structures are" (p. 126).

The first comment upon these examples is that although they are cited under a caption (p. 86), beginning with the words "The findings of the Commission" (as if to suggest that the Commission actually found the existence of these various instances as examples of unreasonableness, prejudice or injury caused by the differences in the levels of the class rates), the Commission itself actually made no finding whatsoever to that effect. Even had the Commission unwittingly ignored the testimony to which the examples refer, and, through error or oversight, had failed to make findings in accordance with the description of the testimony set out in appellees' brief, it would still not be the function of this Court to create support for the Commission's orders by itself making such findings. The law is well settled on this point.

In *Florida* v. *United States*, 282 U. S. 194 (1930), this Court stated (p. 215):

> "The question is not merely one of the absence of elaboration or of a suitably complete statement of the grounds of the Commission's determination, to the importance of which this Court has recently adverted (*The Beaumont, Sour Lake & Western Railway Company* v. *United States, ante*, p. 74), but of the lack of the basic or essential findings required to support the Commission's order. *In the absence of such findings, we are not called upon to examine the evidence in order to resolve opposing contentions as to what it shows or to spell out and state such conclusions of fact as it may permit. The Commission is the fact-finding body and the Court examines the evidence not to make findings for the Commission but to ascertain whether its findings are properly supported.*" (Italics added.)

This language was quoted in *United States* v. *Chicago, M. S. P. & P. R. Co.*, 294 U. S. 494, at pages 504 and 505.

The fact is, however, that the Commission did not overlook the testimony as to the various examples listed in appellees' brief. Instead, in its report, it analyzed and summarized all of this testimony and its discussion thereof plainly indicates that it rejected the evidence as proof of any discrimination or injury because of the differences in levels of the class rates and particularly as any proof of discrimination against Southern and Western territories as a whole and in favor of Official territory as a whole. We refer the Court to pages 615-619, 650-651, 665-671 of the Commission's report (R. 230-234, 265-266, 280-286).

For example, with regard to examples of differences in the levels of the class rates as between Official territory and the Southwest the Commission found (p. 665; R. 280):

> "We have referred to the fact that a comparison of first-class rates within or between territories does not, in most instances, reflect the differences between the rates on which the traffic moves. That observation is particularly suitable to the Southwest. The extent to which exceptions have been published within, and to and from, that area is not specifically shown of record, but there is general testimony to the effect that the class rates in issue move only a small proportion of the total traffic."

And it found further (p. 666; R. 281):

> "* * * Although the proportions of traffic moved at class, exception, or commodity rates between southwestern territory and other territories vary, a great preponderance of the traffic, except from official territory, moved at commodity rates. The levels of the commodity rates are much below the class-rate levels.
>
> "The foregoing description of the rate evidence in-

troduced includes the rate evidence introduced by the Committee. Additional rate evidence was introduced by members of the committee, by a witness representing the Fort Worth Freight Bureau, Fort Worth Chamber of Commerce, Texas Cottonseed Crushers' Association, Southwestern Peanut Shellers' Association, West Texas Chamber of Commerce, Freight Rate Equality Federation and by witnesses for Railroad Commission of Texas, Arkansas Rice Traffic Bureau, and El Paso Freight Bureau. Their rate evidence did not deal with the class rates in issue, but with rates on specific commodities which had been established either as exception or commodity rates.

"In some instances, commodity rates within the Southwest or from or to the Southwest are lower than the rates on like traffic for equal distances within official territory."

Counsel for appellees, having set out the "examples" in their brief, thereafter admit somewhat guardedly that the Commission in its findings did not adopt these examples as proof that the differences in the class rates had the effects claimed for them. At pages 125-126, they say:

> "It may be conceded that these summaries by the Commission are not always as complete or illuminating or helpful as they might be. Therefore in this brief the statements have been based on the record itself and the illustrative material summarized above should certainly demonstrate beyond any doubt how discriminatory and unreasonable the class rate structures are, both in general levels and in particular situations."

The present case affords a striking example of the soundness of the decisions previously cited, holding that it is not the function of the Court to search the record to make findings where the Commission has not done so. The unwarranted consequence which would flow from an attempt of the Court to make findings for the purpose of sustaining an order of the Commission which the Commission itself has apparently judged not warranted by the evidence are plainly apparent here. Certainly the Court should not take the statements in appellees' brief with regard to the so-called "specific class rate inequalities" as a substitute for findings by the Commission, when an analysis of some of these samples will demonstrate why the Commission rejected them and made no finding that they constituted instances of undue prejudice and preference or unjustness and unreasonableness of the rates or of injury brought about by differences in the levels of the class rates.

Thus the very first example on page 98 of appellee's brief cites rates for the transportation of gas black from the Pennsylvania oil fields and from Amarillo, Texas, but an examination of the record will show that the rates from Amarillo which were cited were not class rates (R. 2794, 2795, 8607). Moreover, the witness for the Southwestern Steering Committee who gave the testimony concerning these rates said (R. 2801):

> "Q. Is this submitted to show that in your judgment those rates are too high? A. No. I just show the rates."

It is no wonder that the Commission made no finding based upon this testimony.

In the next paragraph of the brief it is said that "oil well supplies move on class rates". but the record shows that the rates from Tulsa, Oklahoma, are not class rates (R. 8608, 8609), so that the differences in the rates are not due to differences in the class rates in the several territories.

The next instance cited on page 99 of the brief is that of a Kansas manufacturer of coal preparation plants and washeries. The brief asserts that this manufacturer "must absorb in competitive bidding the differentials in class rate levels which favor the manufacturers in Official territory" and that "solely because of this rate inequality, this company is considering moving its plant to Cincinnati, Ohio, where possible sites for a new location have been offered in order to get the lower Official rates." If the Court should adopt appellees' interpretation of the evidence it would give thereto a greatly different effect than did the Commission, which said (p. 673; R. 288):

> "Only three commercial witnesses, speaking for individual establishments in the Southwest and western trunk-line territory, testified in this proceeding. These were a steel company at Denver, a manufacturer of coal-washing machinery at Pittsburg, Kans., and a lamp and stove company at Wichita. The representatives of the two manufacturers last named testified that a great preponderance of their products was shipped to official territory, but neither complained that the rate adjustment had discouraged or barred their enterprises from locating where they are."

The Commission, although summarizing at considerable length the various contentions of representatives of Western territory, did not consider the testimony of the "Minnesota traffic expert", referred to at considerable length at pages 100 and 101 of appellees' brief, worthy of specific mention. It did say, however, as previously indicated, that "only three commercial witnesses, speaking for individual establishments in the Southwest and western trunk-line territory, testified in this proceeding" (p. 673, R. 288). This conclusion covers also the examples with regard to Iowa and Kansas, set forth at pages 101 and 102 of the brief. Moreover, examination of the record pages cited in connection with the reference to the testimony of "an Iowa traffic expert" indicates that none of the shippers in the territory referred to shipped at class rates in competition with shippers in Official territory.

The Commission did specifically refer to the testimony of the manufacturer of heating appliances cited at page 101 of the brief and found that both he and the manufacturer of coal washing machinery at Pittsburg, Kansas, previously referred to, had testified "that a great preponderance of their products was shipped to Official territory, but neither complained that the rate adjustment had discouraged or barred their enterprises from locating where they were". Examination of the record will show that the Kansas manufacturer of heating appliances testified definitely that he was satisfied with his out-bound rates and did good business in Official territory (R. 3239, 3242, 3243).

During the hearing itself Commissioner Aitchison indicated, with regard to some of the statistics and rate and distance comparisons presented by the "Iowa traffic expert", referred to on pages 102 and 103 of the brief, that they had little relation to reality and remarked that since there was no movement for some of the distances shown "we might as well take the distance to the moon" (R. 3023).

With regard to the testimony of the Western "shipper interests" as a whole, the Commission said (p. 650; R. 265):

> "All shipper interests oppose the prescription of minimum class rates; all want the railroads left completely free to meet the competition with whatever source. All oppose changes in their present commodity rates that may be designed to compensate for any readjustment required in class rates."

On page 104 of the brief for the United States and the Commission, there is reference to the testimony of a witness referred to as a "transportation and industry expert from the University of Texas". The brief says that he "analyzed the economic effects of freight rates on five concerns in Texas" and that "his Exhibit 104 contains convincing data showing numerous rate inequalities that inhibit Southwestern industries". His testimony was not ignored by the Commission but was discussed at pages 670 and 671 of the report (R. 285, 286). It will be seen that the Commission was not impressed that the testimony of this witness indicated any substantial injury from the class rates. It found that one of the five concerns referred to by this expert "turned over its capital almost three and one-half times in 1941, made a gross or operating profit of 35.6 percent, and shipped its products in carload and less-than-carload lots to 32 States other than Texas." Another of the companies cited had a profit of 47.5 percent and distributed its products to 33 States. The Commission found that a third company had a profit of 11.5 percent, that its freight charges were less than 5 percent of its net sales, that it procured 54.1 percent of its inbound raw materials from Official territory and shipped out 34.1 percent of its finished products to that territory. In conclusion, the Commission found that this witness did not specify what part, if any, of the freight charges on the shipments of five companies cited were at the class rates in issue, nor the kind of rates in Official territory used for comparisons: that undoubtedly many of the products did not move at class rates; and that there was "no attempt to produce a representative cross-section of Texas industries, some of whose freight charges may be lower than those in official territory".

At page 107 of the brief, reference is made to the testimony of an Atlanta freight rate expert. The testimony of this witness was discussed by the Commission at page 618 of its report (R. 233), where the Commission noted that although this witness presented evidence as to fourteen groups of commodities, "the rates on which were claimed to have been detrimental to southern shippers", "*Only 6 of the 14 move on class rates*". As to two of these commodities, the Commission found that the manufacturers sold all of their output in the South and had never asked the railroads to establish lower rates to the North. With regard to another commodity group, i.e., electrical appliances, the Commission recalled that in the *Southern Governors Case* it had found that the class rates were not unlawful and that the ability of the manufacturer to sell these products did not depend upon the class rates. As to the other commodities moving on class rates, the Commission's conclusion was that the levels of the class rates had no effect upon the ability of the producers to sell in the North.

Nearly four pages of the brief (pp. 108-111) are devoted to the testimony of this witness with regard to the rates for the transportation of rags, ending with his statement that "There is no chance for the Atlanta manufacturer to secure any of that business." Whatever may be the truth as to this last assertion, however, the important point is that it has nothing to do with the class rates or the relationship between the levels of the class rates in the two territories because, as the Commission found (p. 618; R. 233):

> "It appears that the rates on cloth and rags about which complaint was made were not class rates."

At page 111 of the brief, reference is made to the testimony of a "Tennessee public official, a rate expert" with the statement that he "explained 'why it is that Nashville cannot sell work clothing in the North and East, as her rates mile for mile are approximately 31.5 percent higher than her competitors' in Central Territory' " and a table of rates is shown comparing, for example, rates from Nashville to Cleveland and Grand Rapids with rates from New York City to these two points. The brief does not state, however, that the witness admitted having no knowledge whether any work clothing manufactured in New York was ever sold in Cleveland or Grand Rapids (R. 2608, 2609) and finally, having been directed by the presiding Commissioner to answer a question which he had evaded, he admitted that he did not know whether there was any movement, under any of the rates shown, in Official territory (R. 2609).

Next, reference is made to a potato starch plant at Laurel, Mississippi. Testimony concerning this plant was given by an employee of the Tennessee Valley Authority, who, although tendered by counsel for the T. V. A. with the comment that the T. V. A. had "no financial interest in this proceeding" and was "more or less in the position of a friend of the court" (R. 2403), agreed that he could not recall appearing in any case to express views that would not benefit the Authority (R. 2403). He cited a number of plants which he had "studied" and the facts which were developed as to the potato starch plant were typical of all of them. His examination showed that the difference in the levels of class rates was no impediment to this business, first, because the business had grown and, second, because the greatest volume of shipments had been made to Lawrence, Mass., the most distant destination in Official territory (R. 2419).

The reference in the brief to the washboard manufacturer at Raleigh, N. C., is fully answered by the Commission's finding with reference thereto (pp. 615-616; R. 230-231) where it appeared that this manufacturer's business had increased substantially, that 25 per cent of his output went to Detroit, Michigan, a short distance from the location of one of his principal competitors, and that the difference between the levels of the freight rates amounted to only $15.14 on one month's business to Official territory.

Certainly it would require much more proof than this to sustain a finding that the differences in the levels of the class rates impair the ability of Southern shippers and industries to market their products in competition with Northern manufacturers and cause substantial injury to Southern territory as a whole and to justify an order requiring an increase of $15,000,000 or more per year in the freight charges paid by shippers for transportation within Official territory and yet, as the Commission found, there was only one other direct representative of a Southern concern shipping under class rates who testified in the proceeding.

Counsel for the United States and the Commission refer to appellants' argument as a "contention that there were too few shipper witnesses" and assert that the answer to this contention "is that class rates cover a great variety of miscellaneous articles of freight and affect practically every community and every shipper and receiver of freight in the United States" (Brief, p. 126). It is argued that

> "There are tens of thousands of communities, and hundreds of thousands of shippers and receivers of class rate traffic"

and that

> "as a practical proposition, all these thousands of communities and shippers could not have been heard in this case without extending the proceedings beyond all reasonable limits"

and it is said that the Commission used "other ways of obtaining the necessary information".

Appellants do not urge that the testimony of any particular number of shipper witnesses was requisite to establish a case of undue prejudice and preference. This is, however, a case where the prejudice and preference alleged to exist are between territories. Appellees agree that a finding of substantial injury, supported by proof, is essential to sustain an order of the Commission requiring an ultimate conclusion that rates violate Section 3 of the Act and an order requiring that they be changed. On page 128 of appellees' brief, counsel state:

> "We agree with appellants that a rate inequality without a showing of injury does not demand correction."

Where the claimed prejudice and preference are between territories, necessarily the "injury" must be injury to territories. Such injury if it existed could be shown by proof, if it were the fact, that differences in the levels of the class rates in the several territories cause differences in the freight charges actually paid by competing shippers shipping or desiring to ship into common markets and that such differences obstruct or impede their competitive ability and retard their sales and business growth. It is submitted, first, that to justify a finding of injury to Southern or Western territories as a whole, based upon such proof, a substantial number of instances would have to be shown to warrant an inference of injury to the territories as a whole. Especially is this so in the present case, where the method adopted by the Commission to remove the supposed undue prejudice involves requiring an increase in the class rates paid by all shippers and receivers in Official territory shipping under the class rates, whether they are in competition with Southern or Western manufacturers or not. Obviously such a drastic order, imposing increased freight costs of many millions of dollars annually upon the shippers and communities in Official territory under the guise of removing undue preference and prejudice as between territories, would not be justified if based upon the testimony of a single small shipper in the South complaining of the rates on washboards, especially if the record showed, as has been said, that under the existing rates his business has grown and prospered (R. 231). Had the Commission made a finding of injury to the South as a whole and of undue preference to Official territory as a whole, on the basis of such evidence, it is plain that its action would be set aside as arbitrary. The question here is whether the fact that in addition to the shipper of washboards there was testimony of just one other shipper in the South shipping on class rates, the operator of a tanning plant at Andrews, North Carolina, who testified in fact that his products moved on commodity rates (R. 4003-4004), is sufficient to sustain an ultimate determination that the differences in the levels of the class rates unduly prejudice Southern territory as a whole and prefer Official territory and to sustain an order requiring a 10 per cent increase in all class rates in Official territory to eliminate the discrimination. For the Commission's own analysis of the evidence of individual shippers at pages 615 [illegible]19 of its report (R. 230-234) and quoted at pages 83 to 86 of our main brief, indicates that these were the only two shippers in the South for whom testimony was presented whose transportation charges were affected by the differences in the levels of the class rates. Indeed, as to the washboard manufacturer the Commission found that the application of the Official territory level of rates on his September shipments would have reduced his freight charges by 8 per cent. Certainly such a finding does not justify an order requiring that the class rates in Official territory be increased 10 per cent and those in the South reduced by a like percent.

As shown in appellants' main brief and as plainly apparent from the report of the Commission itself, similar comments are required with regard to the alleged proof of injury to individual shippers as between those in the Southwest and West and shippers in Official territory.

It may be remarked, further, with regard to the small number of these individual shipper witnesses that in a proceeding where there were many days of hearings in various parts of the country, the fact that only nine persons directly connected with industries in the South and three with industries in the West and Southwest were sufficiently concerned to appear and testify at all, affords a striking demonstration that the differences in the levels of the class rates do not have the adverse and throttling effects upon Southern and Western industries and upon those territories as a whole which have been so loudly proclaimed.

It is not necessary to argue that testimony from any particular number of witnesses is necessary to prove injury to one territory and benefit and preference to another. It is sufficient here that both the paltry number who appeared and the nature of their testimony negative any inference of territorial injury and discrimination as the result of the differences in levels of the class rates.

C. Appellees' argument that the "higher class rates have impeded the development and movement of class rate traffic within Southern and Western Territories and from these Territories to Official Territory" is both invalid in itself and as a claim that the differences in class rates have caused substantial injury to the South and West is negatived by the Commission's findings.

The same general comments are applicable to the argument in appellees' brief with regard to the so-called economic testimony, the testimony of would-be economic experts as distinguished from shippers who actually pay freight charges. The Commission did not ignore this evidence but discussed and summarized it and plainly rejected it as proof that the differences in the levels of the class rates result in any injury to the South and West.

This economic testimony is discussed at pages 127 ff. of the United States and the Commission under the heading

> "Higher class rates have impeded the development and movement of class rate traffic within Southern

and Western Territories, and from these Territories to Official Territory, and thus have made all the class rate structures involved in this proceeding obsolete".

The first part of the argument under this heading is devoted to statistics and the testimony of the so-called economic experts. On this point it is sufficient to direct the Court's attention to the Commission's discussion of this evidence at pages 536-548, 650-654, 673, 674, 695-697 of its report (R. 151-163, 265-269, 288, 289, 310, 311), where the Commission plainly found that neither the class rates nor anything else had impeded or retarded the industrial development of the South.

The second part of the argument begins at page 138 with the sub-heading "Non-use of class rates". It is, of course, an undisputed fact and the Commission has found that the class rates are charged on an insignificant portion of the freight originating in the South and West, whether moving locally within those territories or shipped from those territories into Official territory.

The inference that we think should be drawn from this fact is that the differences in the levels of the class rates and the fact that the class rates as such are higher in the South and West than in Official territory cannot be the cause of unjust and unreasonable charges since they are not the rates which are charged, and cannot produce undue and unreasonable prejudice and preference for the same reason. The corresponding fact is that the railroads have provided exception or commodity rates for the transportation of the products of the South and West to a greater extent than they have done for the transportation of the products of Official territory. This is true as to interterritorial traffic as well as traffic within each of the territories. Thus, industries in Official territory shipping into the Southwest pay class rates on 22.5 per cent of their carload shipments; whereas the railroads have provided commodity rates for 95.9 per cent of the business shipped by Southwestern manufacturers into Official territory.

Appellees attempt to meet this fact by asserting, quite without proof in the evidence and certainly without findings by the Commission, that "exception and commodity rates can never be obtained until the industry has been developed and shipments are ready to move" (Brief, p. 145). The Commission found, however, that no instance was proved "where an industry was not established in the South because of the class rate level" (p. 622; R. 237) and there was affirmative testimony by witnesses who had had experience in locating industries that they had not been deterred in locating plants in the South because of the difference in the class rate levels (R. 3464, 3871-3894, 3907, 3960, 4095-4106).

It may to the observer seem desirable or at least less complicated that the rates charged on a greater proportion of shipments should be class rather than commodity rates. However, as argued in our main brief, rates are not unlawful merely because they are commodity rates rather than class rates. The lawfulness of the commodity rates was not in issue in this proceeding and the class rates cannot be unlawful if they are not charged. Whether the rates actually charged are class rates or commodity rates or exception rates or some new kind of rates is plainly a matter of managerial discretion for the railroads rather than lawfulness of the charges, and the Commission is without authority to require that the rates charged shall be of one type rather than another.

But even if it were within the authority of the Commission to require class rates to be changed in order to induce the charging of class rates rather than commodity or exception rates upon a larger proportion of railroad traffic, this would not justify or explain all of the action of the Commission here. It may explain or justify reducing class rates in the South and West so that they will be more attractive or will supersede the commodity or exception rates. It can certainly not be a reason justifying an increase in the class rates in Official territory. For it is too much to assume that an increase in the class rates in Official territory would increase the volume of proportion of traffic moving at class rates. Moreover, the inconsistency of the Commission's action in so far as Official territory shippers are concerned is shown by the fact that the Commission's interim orders would reduce the class rates for transportation from Official to Southwestern Trunk Line and Western territories, where at the present time the class rates are charged on 12.6, 12.3 and 22.5 per cent of the total carload traffic, and would increase the class rates charged for transportation entirely within Official territory, where the class rates are charged on only 5.8 per cent of the total traffic. Anyway the matter is looked at, the reasoning of the Commission in this respect and appellants' argument endeavoring to support it is unsound and does not sustain the interim orders.

D. The decision of the lower court and the Commission's orders cannot be sustained by the computations of comparative costs for transportation in the several territories as contended by the appellees.

The subject of costs has been discussed at pages 112 to 127 of the main brief for these appellants. Little more need be said in answer to the argument of appellees with regard thereto.

The first point which should be noted is that in dealing with costs, as in all of their arguments, appellees have predicated their contentions upon the assumption that the 1940 legislation wrought a fundamental change in the law and altered the burden of proof, not merely procedurally but substantively, so that rates in one territory were made unlawful because upon a different level from that of rates in another territory unless the difference was shown to conform to differences of costs of transportation. The fallacy of such an argument is patent from the fact that if the class rates are unlawful because the differences in the territorial levels thereof do not correspond with the differences in the computed costs for transportation, then most of the rate structure of the country must be unlawful. The commodity rates on raw materials and finished products in the South, which are on a lower level than those within Official territory and the higher rates in Official territory, must also be unlawful. A conception of the law which would invalidate the entire rate structure cannot be sound.

Second, it may be well to repeat what was said in appellants' main brief that the cost computations do not and do not purport to show the comparative costs of transporting freight upon which class rates are charged.

The cost computations are a product of the financial figures produced by the operations of the several groups of railroads in the handling of their traffic. According to Dr. Edwards, if the average revenue from all freight of all kinds transported in a particular type of car for a given distance with a given loading equals the computed average cost for that distance, type of car and loading, then the rates are adjusted on the average to meet the carriers' revenue needs (R. 3520). The record shows that as between Official territory and the South, for example, the differences in the average revenues per ton of all freight in each territory correspond approximately with the differences in the computed average costs (R. 206, 221). This certainly indicates that the rates actually charged are adjusted with reasonable relation to transportation costs and that to increase the class rates charged in Official territory without reducing other rates which go to produce the average revenues, would conflict with the conclusion called for by the basic nature of the cost computations themselves.

The only further comment which appellees' brief invites in addition to what is said in appellants' main brief is that nowhere in the brief for appellees is any attempt made to explain how the argument as to costs sustains a finding that the class rates in Official territory should be made uniform with those in the West and should be increased in order to accomplish an approach to uniformity. The cost computations show substantially higher average cost of transportation in Western territory than in Official territory and if costs are to be controlling, there is plainly no justification for increasing the class rates in Official territory so that their level will approach uniformity with that of western class rates.

E. As to the differences in the consists of traffic.

Here again appellees' argument, following the reasoning of the Commission, emphasizes that they both rest upon the assumption that the 1940 legislation changed the law. The reasoning in the Commission's report, which appellees adopt, was that since the class rates for transportation within each territory are on a uniform level (an assumption incorrect as to Official territory, where the class rates are higher in certain sections), therefore differences between the levels of the rates in one territory and those in another territory are to be held unlawful unless it appears that there are greater differences between territories in the kinds of freight transported in each than the differences existing between different railroads in each territory.

How great a change this represents in the conception of the law upon which the Commission has heretofore acted is shown by the fact that the class rates now found to be unlawful unless justified, were prescribed by the Commission itself and that the Commission expressly found in fixing the maximum levels of the rates in each territory, that it did so in the light of the traffic and rate structure in that territory and the differences between one territory and another in these regards. As has been pointed out, the Commission in the *Western Class Rate Case,* 164 I. C. C. 1, at page 188 said

> "Class rates in w.t.l. territory appreciably higher than in official territory are justified also by the nature and volume of the articles moving under such rates in the respective territories."

In the *Eastern Class Rate Case,* 164 I. C. 314, the Commission similarly indicated that in prescribing the class rates in Official territory, it fixed those rates at a lower level than the level of the class rates in the South and West because of the differences in the nature of the traffic and the rate structures in the several territories. Appellees do not argue that there is any finding or evidence that these facts have changed.

We agree with appellees' statement (p. 189) that

> "The consist problem then really resolved itself into one of providing adequate revenues for the carriers from the traffic which they transport,"

It is difficult to see, however, why it follows that the class rates in one territory, which are a part of the total rate structure and provide the carriers in that territory with their revenues from all of the traffic which they transport, become unlawful unless justified because on a different level from that of the class rates in another territory, established on a different theory in the light of a different rate structure and traffic movement. It is, of course, for the Commission to weigh the evidence on such matters. But the Commission acts arbitrarily and unlawfully if it approaches the same facts with a changed point of view and reaches a different conclusion without any finding or proof of altered conditions, or if it does so upon the assumption that the law has been changed when such is not the case.

F. As to the comparative levels of the commodity and exception rates.

Appellees' argument with regard to the differences between the commodity and exception rates in the several territories misinterprets the contentions of appellants with regard thereto and goes outside of the record for its factual basis. Reference is made to the report of the Board of Investigation and Research, reproduced as House Document No. 303, 78th Congress, First Session, for a statement that on a limited number of commodities, such as brick, cement, fertilizer, logs, etc. "there are substantial regional differences in the levels, with higher rates in the South and West than in Eastern Territory", and it is said that

> "The major premise of appellants, that commodity rates are lower in the South and West, is thus without support in the record, * * *."

Of course we do not know what study the Board of Investigation and Research made, but the record in the present case certainly shows and the Commission found that on most of the commodities listed the rates in Official territory are substantially higher, mile for mile, than the rates for the transportation of the same commodities in the South. Moreover, while the Commission said that it could not reach a conclusion from the record as to the relative average levels of the rates on raw materials generally in the South and Official territory (p. 602, R. 217), it definitely found that the rates on brick (p. 593, R. 208), fertilizer and fertilizer materials (p. 594, R. 209), coke (p. 595, R. 210), lime (p. 595, R. 210), logs (p. 596, R. 211), pig iron (p. 597, R. 212) pulpwood (p. 597, R. 212), sand, gravel, etc. (p. 598, R. 213), iron and steel scrap for certain distances (p. 599, R. 214), sulphuric acid (p.

599, R. 214) and iron ore (p. 599, R. 214) are higher in Official territory than in Southern territory.

Appellees also argue that the Commission may require changes in the class rates without changing the commodity rates, because on the authority of the so-called *Staley* case (*United States* v. *Wabash R. Co.*, 321 U. S. 403) it may proceed one step at a time in enforcing the statute. The latter proposition may be accepted, but it does not meet appellants' argument. The point which appellants urge is that the class rates are merely parts of the entire structure or pattern of transportation rates in each territory, that the territorial machinery of rate making is a necessary or logical development, at least so long as the railroads are not nation-wide systems and with few exceptions the boundaries of the territories conform to the termini of the railroads in each territory and that unless all rates are to be made uniform and are unlawful unless this is done, it cannot be said that the class rates forming a part of the rate structure of one territory are unlawful because on a different level from the class rates which are the part of a different rate structure in a different territory and serve a different purpose in providing the carriers with revenues. It was on this theory that the Commission itself prescribed the class rates in the several territories, and unless the law has been changed the principle is still valid.*

---

* It may be interesting, incidentally, to speculate how nationwide, or even territorial, uniformity of classifications and rates is to be achieved and maintained if the Department of Justice, which here urges it, succeeds in its actions against the railroads for violations of the anti-trust-laws in their rate-making practices.

V

Appellees' argument that "interterritorial rate problems are insoluable without uniformity of class ratings and rates" is an argument against the validity of the interim orders in issue here.

The Commission determined that uniformity of class rates should await uniformity of classification ratings. The working out of a uniform classification with uniform ratings for all commodities in all territories is a matter left to the future. Under these circumstances, the argument at pages 196 to 205 of the brief for the United States and the Commission only emphasizes the impropriety of a finding that rates are unlawful because not uniform so long as the classification ratings are not uniform. Especially is this so as to the portion of the orders requiring an increase in rates in Official territory, in view of the fact that the differences in the classification ratings generally favor the other territories.

Thus, the Commission found, as previously observed, that "on many articles a shipper in a lower rated territory (Official) must pay higher rates than one in a higher rated territory (Southern or Western), owing to differences in classification ratings (R. 123, p. 508). In other words, so long as the classification and classification ratings are not made uniform, the effect of the Commission's order is to require that "on many articles" the rates which shippers in Official territory pay, which because of higher classification ratings, are already higher than the rates for the transportation of the same articles in the South or West, must be further increased, while the lower rates in the South and West are to be reduced. If this is not arbitrary action, it is hard to imagine what would be. Certainly it is without support in any theory of approaching uniformity.

VI

The arguments in the briefs for appellees confirm appellants' contention that the real purpose of the Commission's orders was to bring about a redistribution of industry. Far from sustaining the validity of the orders, the argument requires that they be held unlawful.

In the summary, beginning at page 196 of the brief for the United States and the Commission, as well as in the briefs of some of the other appellees, it is argued that regional rate making, should give way to nationwide uniformity and that differences in rate levels in different territories which for the purposes of the argument are referred to as "rate barriers", should be eliminated to the end of stimulating the industrial development of the South and West. To be sure, in order to give a semblance of respect for the decisions holding that the Commission has no authority to order changes in rates for such a purpose, it is said (p. 200) that the rate differences should be eliminated "not to change our economy, but to remove discriminatory conditions which unfairly and unlawfully prevent the possibility of change". The whole tenor of the argument, however, is that rates should be changed in order that "the low income status of the South and West may be improved by removing the barriers to industrialization in those regions" (p. 204). It is said that the differences in the levels of the class rates provide "something remarkably similar to the working of a protective tariff" (p. 204).

The argument plainly echoes the campaign of agitation which provided the atmosphere in which the proceeding was inaugurated and decided by the Commission, and it probably reflects the underlying motive of at least some members of the majority of the Commission. This, however, only serves to emphasize the unlawfulness of the

Commission's action because to the entire argument there are several conclusive answers, which are likewise applicable to the decision and orders of the Commission themselves.

First of all, the factual premise which the argument assumes and numerous statements made in the course of the argument are contrary to the true facts, both as found by the Commission and as shown by the evidence. The Commission did not find nor did the evidence as a whole show that the differences in the levels of the class rates have acted in any way to discourage or impede the industrial development of the South or West or have operated as a trade barrier to the movement of goods produced in these territories to markets in Official territory. The Commission found, as the evidence shows, that in the ten-year period from 1930 to 1940 manufacturing employment increased in the South and decreased in the North; that while Official territory had a 25 per cent decrease in the values of manufactured products, the South had an increase; that the number of wage earners in manufacturing industries decreased by 12 per cent in Official territory and increased 5 per cent in the South (p. 621, R. 236). Indeed, as the Commission found, when the Southern Governors were proclaiming to the world the virtues of the South (instead of appearing before the Commission to plead poverty in order to secure a revision of freight rates in their favor), they proudly published a statement that in a period of two years "the number of manufacturing plants in the South increased by 803 as contrasted to a decline in the rest of the United States of 3,120" (p. 622, R. 237).

In further contradiction of the argument that the differences in class rate levels have acted as a trade barrier, stimulating the industrial development of the East and discouraging that of the South or West, the Commission found (p. 619, R. 234) that

> "The industrial development of the East is due to many factors other than transportation services and costs,"

and these factors were listed. It found that "any differences in freight charges resulting from differences in class rate levels is only a small fraction" of the destination value of manufactured goods and that "many commodities have a nationwide market" (p. 619, R. 234). The Commission found further that "no specific instance was proved where an industry was not established in the South because of the class rate level" (p. 622, R. 237).

In the second place, it is well settled that the Commission is without authority to order changes in freight rates for the purpose of inducing the location of industry at one point or in one section of the country rather than in another. (See cases cited and discussion of this point at pp. 138 to 141 of appellants' main brief.)

Finally, appellees, while arguing that freight rate barriers to industrial development should be removed, are really seeking to support the Commission's action in order to accomplish this very purpose but for the benefit of different sections of the country. This is especially so in view of the nature of the orders, whose validity is here in issue. The particular orders attacked in this suit would admittedly be of little benefit to the South and West in causing lower transportation charges in those territories, especially in the South, because of the small volume of traffic upon which the class rates are charged. The primary effect of the orders would be to impose increased costs upon doing business in Official territory. Appellees are, therefore, arguing that because, as they claim, a wider distribution of industrialization throughout the coutry is desirable, this should be accomplished by increasing, through the mediu of increased freight charges, the costs of doing industria business in Official territory and thereby discouraging industries to locate or remain in that territory and encouraging them to move elsewhere. This would indeed be usin freight rates, as this Court said in *State of Georgia v. Pennsylvania R. Co.*, 324 U. S. 439, 450, cited at page 205 of appellees' brief, as "but one form of trade barriers". It is plain that the Commission has no authority to order rates increased for such a purpose.

VII

Despite arguments to the contrary in the briefs for some appellees, the conclusion is inescapable that the Commission's orders rest, in the last analysis, upon an erroneous conception of the effect of the amendment to Section 3(1) and 5(b) of the Transportation Act, 1940.

It is argued in the brief for the United States and the Commission and in those for the Southern and Western States that the Commission's decision has not been influenced by the Ramspeck Resolution, which was Section 5 (b) of the Transportation Act, 1940, and that it rested solely upon Section 3(1). However, as has been shown, all of the arguments in support of the orders and the Commission's reports themselves, because of the complete lack of preliminary findings otherwise essential to ultimate findings of violation of Sections 1 and 3, can only be explained on the ground that they assume that Congress has decreed that class rates must be uniform in all territories. Without this underlying assumption that because levels are different the class rates in the several territories are unlawful, neither the reasoning in the Commission's report nor the arguments in support of the Commission's orders overcome the absence of essential findings.

Plainly the mere addition of the three words "region, district, territory" to Section 3 did not, by itself, change the substance or effect of Section 3 except to enlarge the parties entitled to its protection. It did not alter the nature of the requirements for a finding of a violation of the section. The conclusion is inescapable, therefore, that it was either the Ramspeck Resolution or the remarks made in Congress by and to Southern Congressmen or the "groundswell of agitation" which led the Commission to believe that the law had been changed to impose the requirement of uniformity. Since neither the amendment to Section 3 (1) nor Section 5 (b) of the Transportation Act can be read as having any such effect and such a purpose is denied by the remarks in Congress other than those by and to Southern Congressmen, the situation here is plainly analogous to that in the cases involving the Hoch-Smith Resolution, where the Commission construed the resolution directing it to investigate as a mandate requiring it to order the change in rates for which there was clamor. It is immaterial here whether the Commission considered that its orders were directly required by Section 5(b) (the Ramspeck Resolution) or whether it issued its orders to enforce Section 3(1) but was led by the resolution and the popular clamor to construe the amendment of Section 3(1) as requiring uniformity of class rates where "territories" are concerned. In either event, its action was erroneous as a matter of law and its orders invalid for the same reasons, as were the orders condemned in *Ann Arbor R. Co.* v. *United States*, 281 U. S. 658 and *Atchison, T. & S. F. Ry. Co.* v. *United States*, 284 U. S. 248.

Conclusion

It is submitted that the arguments of appellees do not overcome the contentions made by the appellants and that, in accordance therewith, the judgment of the court below should be reversed and the case remanded with

direction to annul, set aside, and permanently enjoin t
orders of the Interstate Commerce Commission, who
validity is here in issue.

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF NEW YORK

Civil Action No. 2311

THE STATES OF NEW YORK, DELAWARE, INDIANA, MARYLAND, MICHIGAN, NEW JERSEY, OHIO, WISCONSIN, AND THE COMMONWEALTH OF PENNSYLVANIA,

Plaintiffs,

vs.

THE UNITED STATES OF AMERICA,

Defendant.

Civil Action No. 2337

THE ATCHISON, TOPEKA & SANTA FE RAILWAY CO., ET AL.,

Plaintiffs,

vs.

THE UNITED STATES OF AMERICA,

Defendant

STATEMENT AS TO JURISDICTION UPON APPEAL

Pursuant to Paragraph 1 of Rule 12 of the Rules of the Supreme Court of the United States, The Honorable Horace A. Hildreth, Governor of the State of Maine; The Honorable Charles M. Dale, Governor of the State of New Hampshire; The Honorable Mortimer R. Proctor, Governor of the State of Vermont; The Honorable Maurice J. Tobin, Governor of The Commonwealth of Massachusetts; The Honorable John O. Pastore, Governor of the State of Rhode Island; and The Honorable Raymond E. Baldwin, Governor of the State of Connecticut (hereinafter called your petitioners), interveners in the above-entitled consolidated proceedings, submit herewith their statement particularly disclosing the basis upon which the Supreme Court of the United States has jurisdiction upon appeal to review the final decree and order entitled—Final Decree and Order Continuing Interlocutory Injunction—(Appendix C hereto)* made and entered by this Court on May 27, 1946, in the above-entitled proceedings. Your petitioners' petition for appeal was filed on June 25, 1946, and is presented to this Court herewith.

I

Jurisdiction

The jurisdiction of the Supreme Court of the United States to review, upon direct appeal, the final decree and order entered in these proceedings is conferred by Section 210 of the Judicial Code (United States Code, Title 28, Section 47a), which provides, in part, as follows:

> "A final judgment or decree of the district court in the cases specified in section 44 of this title may be reviewed by the Supreme Court of the United States if appeal to the Supreme Court be taken by an aggrieved party within sixty days after the entry of such final judgment or decree, and such appeals may be taken in like manner as appeals are taken under existing law

---

*(Clerk's Note.—The Opinion, Interlocutory Injunction, Final Decree and Order Continuing Interlocutory Injunction are printed as Appendices "A", "B" and "C" to the Jurisdictional Statement in No. 343 and are not reprinted here.)

> in equity cases. * * * The Supreme Court may affirm, reverse, or modify as the case may require the final judgment or decree of the district court in the cases specified in section 44 of this title."

The above-entitled proceedings are cases specified in said section 44 of Title 28, within the meaning of the statute. That section provides in part as follows:

> "The procedure in the district courts * * * (b) in respect to cases brought to enjoin, set aside, annul, or suspend in whole or in part any order of the Interstate Commerce Commission shall be as provided in sections 45, 45a, 46, 47, 47a and 48 of this title." (38 Stat. 220)

Statutes or Treaties Involved

The validity of a statute of a State, or of a statute or treaty of the United States is not involved.

The construction of various provisions of the Interstate Commerce Act of February 4, 1887 (24 Stat. 379), as amended, is involved, however. These provisions include the declaration of national transportation policy contained in the preamble to the Act, which is, in part, as follows:

> "It is hereby declared to be the national transportation policy of the Congress * * * to encourage the establishment and maintenance of reasonable charges for transportation services without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices * * *" (54 Stat. 899);

the provisions of Sections 1(4) and 1(5) of the Act (United States Code, Title 49, Sections 1(4) and 1(5)), requiring the establishment and maintenance of just and reasonable, and prohibiting unjust and unreasonable, rates, fares and charges for railway transportation; the provisions of Section 3(1) of the Act (United States Code, Title 49, Section 3(1)) forbidding undue preference or advantage in favor of and undue prejudice or disadvantage against any "particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory or any particular description of traffic"; and the provisions of Section 15(1) of the Act (United States Code, Title 49, Section 15(1)), which confers upon the Commission the power to order the correction of any unlawfulness which it finds, and, under certain circumstances, to prescribe the manner of correction.

Also involved in these proceedings is the matter of construction of the Resolution of Congress commonly known as the Ramspeck Resolution (54 Stat. 902), the text of which is as follows:

> "(b) The Interstate Commerce Commission is authorized and directed to institute an investigation into the rates on manufactured products, agricultural commodities, and raw materials, between points in one classification territory and points in another such territory, and into like rates within any of such territories, maintained by common carriers by rail or water subject to Part I of the Interstate Commerce Act, as amended, for the purpose of determining whether said rates are unjust and unreasonable or unlawful in any other respect in and of themselves or in their relation to each other, and to enter such orders as may be appropriate for the removal of any unlawfulness which may be found to exist: *Provided,* That the Commission in its discretion may confine its investigation to such manufactured products, agricultural commodities, and raw materials, and the rates thereon as shippers thereof may specifically request be included in such investigation."

The Nature of the Case and the Rulings Below

The above-entitled proceedings were instituted in the District Court of the United States for the Northern District of New York (hereinafter called the District Court) pursuant to the provisions of United States Code, Title 28, Sections 41(28), 44, 46 and 47, to enjoin, set aside and forever annul a certain order made and entered by the Interstate Commerce Commission (hereinafter called the Commission) on May 15, 1945, as amended by a supplemental order made and entered by the Commission on October 30, 1945—in a proceeding pending before the Commission entitled—Class Rate Investigation, 1939—and numbered 28,300 in the dockets of the Commission. Said orders, if permitted to become effective, would require increases in all railroad class rates within Official Territory so-called, being generally all that portion of the United States lying east of the Mississippi River and north of the Ohio and Potomac Rivers, and a reduction in all railroad class rates in the remaining portions of the United States east of the Rocky Mountains, as well as a similar reduction in class rates applicable into Official Territory from such other regions.

Plaintiffs in their petitions alleged that the orders entered by the Commission were invalid and unlawful, for the reasons, among others, that the orders were arbitrary and capricious, were based upon an erroneous interpretation of the law, were lacking in support of necessary and adequate preliminary findings of fact, and were inconsistent with and contrary to both the subsidiary findings of fact of the Commission and the evidence. Upon application by the plaintiffs, and after hearing the parties, the District Court entered an interlocutory injunction (Appendix A hereto), restraining enforcement of the Commission's orders pending its final determination of the issues on the merits.

The orders of the Commission which are complained of are *ad interim* orders, so-called, which seek to prescribe the rates to be charged by the carriers, parties respondent in said proceedings before the Commission, pending completion of other changes which the Commission has found required, but which it has not as yet ordered to be made effective. Thus, in a proceeding entitled—Consolidated Freight Classification—which was consolidated with said Class Rate proceeding and decided at the same time, the Commission found that all freight classifications presently maintained by the carriers are unlawful to the extent that they are not uniform, and it has instructed the carriers to prepare and submit a uniform classification for the Commission's consideration. The Commission has also found, in its Class Rate proceeding, that all class rates in the territory east of the Rocky Mountains are and in the future will be unlawful unless uniform, and it has indicated the uniform scale of rates which it will order to be made effective concurrently with the establishment of the uniform classification hereinbefore mentioned. The *ad interim* orders of the Commission are represented to be merely temporary and partial remedies for the alleged unlawfulness which the Commission has "found".

In its report accompanying its order dated May 15, 1945 (262 I. C. C. 447), the Commission found that all class rates now in effect within and between the several rate territories comprising the area east of the Rocky Mountains are unjust and unreasonable in violation of Sections 1(4) and 1(5) of the Act, and in its supplemental report accompanying its supplemental order dated October 30, 1945 (264 I. C. C. 41), the Commission indicated that it had found Official Territory class rates unjustly and unreasonably low. The Commission further found that, because of the lack of uniformity between Official Territory class rates and interterritorial class rates from other territories into Official Territory, said rates are, and for the future will be, unduly preferential of Official Territory as a whole and the shippers and receivers of freight therein and unduly prejudicial to Southern, Southwestern and Western Territories and the shippers and receivers of freight therein. On the basis of these so-called ultimate findings, the Commission prescribed rates for the future, which are approximately 15% in excess of present Official Territory class rates and lower, by approximately the same or greater amounts, than present class rates in the other territories, and while not requiring such prescribed rates to be made effective immediately, did order immediate increases approximating 10% in Official Territory class rates and concurrent reductions of approximately 10% in Southern, Southwestern and Western Territory class rates, and in all interterritorial class rates.

The issues raised in the proceedings include the issue of whether the orders of the Commission can be sustained as valid and proper orders, notwithstanding the fact that in connection with the Commission's ultimate finding that Official Territory rates are unreasonably low, the Commission has failed to make any finding of particular facts supporting its so-called ultimate finding of unreasonableness (such as a finding that said rates are noncompensatory or threaten a rate war or will otherwise have harmful effects upon the revenues and transportation efficiency of the carriers maintaining such rates or upon other and competing carriers) and notwithstanding the fact that the record not only precludes the making of any such particular findings, but also, and on the contrary, requires findings, which the Commission has made, which are inconsistent with such required particular findings and said ultimate finding. The further issue is raised as to whether the provisions of the Transportation Act of 1940 so altered the substantive transportation law as to render the Commission's orders valid and lawful, notwithstanding the fact that, in connection with the Commission's ultimate finding that Official Territory class rates and interterritorial class rates into Official Territory, are, because of their relationship, unduly preferential and prejudicial, the Commission has failed to make any findings of particular facts supporting its so-called ultimate finding of undue preference and prejudice (such as findings that the non-uniform rates are charged, or that if charged, they are charged on the same types of freight, or upon freight of competing shippers, or that injury results from the continued maintenance of such nonuniform rates, or that transportation conditions are uniform and that nonuniformity of rates is therefore not justified) and notwithstanding the further fact that the record not only precludes the making of any such particular findings, but also, and on the contrary, requires findings, which the Commission has made, which are inconsistent with such required particular findings, and with said ultimate finding. A further issue raised is as to whether an order of the Commission directing the removal of undue preference and prejudice must afford the carrier or carriers involved alternative methods of correcting said violation, at least in the absence of a finding, and evidence to support such a finding, that lawful alternative methods do not exist.

The District Court has ruled that the orders of the Commission are not invalid, and has held in substance that while the Commission's ultimate findings are not supported by adequate particular findings of fact, this omission is not fatal; that the Commission having weighed the evidence must be deemed to have decided the issues correctly. On the issue of whether the carriers must be afforded alternatives in any order seeking to correct a Section 3 violation, the Court has ruled that an order entered under Section 15(1) of the Act does not require such alternatives. The decision of the District Court appears as Appendix B hereto.

The decision of the District Court is squarely in conflict with the decisions of the Supreme Court of the United States holding that the validity of an order of the Commission is dependent upon the support which the Commission's findings of particular facts afford the Commission's ultimate findings. Said decision is also squarely in conflict with the decisions of the Supreme Court of the United States with respect to the necessity of alternatives in an order requiring correction of a Section 3 violation.

The Questions Involved Are Substantial

The immediate substantial importance of the issues raised in these proceedings was well stated by the District Court in its final decree herein, wherein this Court concluded, as a matter of law,

> "The decision of these consolidated causes necessarily involves the determination of novel questions of law of great importance to the shippers, the carriers, and the public of this country. There are reasonable and serious doubts as to the determination of these novel and important questions."

These issues, while of great importance in so far as concerns the immediate effect of their determination, are of even more far-reaching significance as concerns the future transportation law generally, and more specifically, the powers and duties of the Commission. The decision of the Commission under review in these proceedings represents a sharp break with the past and an embarkment upon a new course of regulatory practice, based upon the newly-embraced concept of uniformity. Acting under a supposed mandate from Congress to substitute the standard of uniformity for the time-honored standards of legality to which it has adhered for 58 years, the Commission has cast aside all those considerations which have guided its deliberations in the past, and now holds that class rates must be made uniform virtually throughout the nation, notwithstanding the transportation factors which caused such rates to be established at non-uniform levels originally, which factors still prevail. If the Commission has rightly interpreted (and it is clear that it has not) the action of Congress, and if rate uniformity is to become the new standard of lawfulness, this revolutionary change in the law will have broad repercussive effects upon, not merely the class rates which are in issue in these proceedings, but upon all railroad rates.

Decisions Sustaining Jurisdiction

United States v. *Chicago, Milwaukee & St. Paul Railroad Co.,* 294 U. S. 499 (1935);

Texas & Pacific Railway Co. v. *United States,* 289 U. S. 627 (1933);

Ann Arbor Railroad Co. v. *United States,* 281 U. S. 658 (1930).

Respectfully submitted,

Henry E. Foley

STATEMENT OF THE CASE 2

Class Rates 4

The Extent of Present Class Rate Uniformity 5

The Relationship between Class Rates and Other Types of Railroad Rates 9

Relative Levels of Class Rates and of All Rates 10

The Commission's Report and Order 11

The Action of the District Court 13

Further Action of the Commission During the Pendency of these Appeals 14

SPECIFICATION OF ERRORS 15

SUMMARY OF ARGUMENT 21

ARGUMENT 23

POINT ONE 23

The Commission's Ad Interim Order, Which The District Court Refused to Enjoin, Set Aside And Annul, Has Been Vitiated By The Order Which The Commission Entered on December 5, 1946 in Ex Parte 162, And This Court Should Therefore Summarily Reverse The Order of The District Court and Remand The Proceedings With Instructions To The District Court to Issue A Permanent Injunction 23

POINT TWO 26

The Ad Interim Order Of The Commission Requiring A 10% Increase In Official Territory Class Rates Is Invalid, And The District Court Erred In Refusing To Enter an Order Enjoining, Setting Aside, And Annulling Said Order 26

Page

A. The Commission Has No Authority To Require Changes in Established Rates unless Such Rates are Unlawful .. 26

B. An Order of the Commission is Invalid Unless the Ultimate Findings Upon Which Said Order Rests Are Supported by Adequate Particular Findings Which in Turn Are Supported by Substantial Evidence............. 27

C. The Commission's Ad Interim Order Requiring a 10% Increase in Official Territory Class Rates Cannot Be Sustained as a Valid and Appropriate Correction of a Violation of Section 1 of the Act.................. 29

1. Rates are not unreasonably low, in violation of Section 1 of the Act, unless they are either noncompensatory, or otherwise threaten to have harmful effects upon the revenues and therefore the transportation efficiency of the carriers which maintain such rates or of other and competing carriers 29

a. The law was such prior to the legislation of 1940 29

b. The 1940 "amendments" to the Act did not change the test of unreasonableness 34

2. The Commission has not found and, on the evidence, could not find, either that Official Territory class rates are noncompensatory or otherwise threaten to have harmful affects upon the revenues of the carriers which maintain such rates or of other and competing carriers; in fact, the Commission's own subsidiary findings preclude such a finding............ 38

a. The Commisison has not found that Official Territory class rates are noncompensatory or threaten to create a noncompensatory situation................ 38

b. The record will not warrant, and the Commission's own subsidiary findings preclude, a finding that Official Territory class rates are noncompensatory, or threaten to create a noncompensatory situation.. 39

PAGE

(1) The evidence does not warrant, and the Commission's subsidiary findings preclude, a finding that Official Territory class rates, generally, are noncompensatory or threaten a noncompensatory situation 39

(2) The evidence does not warrant, and the Commission's own subsidiary findings preclude, a finding that any particular Official Territory class rates are noncompensatory or threaten a noncompensatory situation 43

3. Even if the evidence had warranted (as it does not) and the Commission's findings had not precluded (as they do) a finding that Official Territory less-than-carload rates or any other particular class rates are unreasonably low such a finding would not warrant an order increasing all Official Territory class rates 45

D. The Commission's Ad Interim Order cannot be sustained as a Valid and Appropriate Correction of a Violation of Section 3 of the Act 46

1. The record does not warrant, and the preliminary findings of the Commission are inconsistent with, and therefore vitiate, the Commission's ultimate finding of a Section 3 violation 47

a. Rate disparity does not result in undue preference and prejudice within the meaning of Section 3 of the Act unless such disparity (1) results in disparity in actual shipping charges, (2) causes injury, and (3) is unjustified by transportation conditions. The 1940 amendment of Section 3 of the Act did not alter this well-established concept 47

b. The Commission's ultimate finding of a Section 3 violation is not only based upon a misconception of law, but is unwarranted by the record and inconsistent with the Commission's own subsidiary findings 52

PAGE

(1) The Commission misconstrued the Transportation Act of 1940 52

(2) The record will not warrant, and the Commission's own subsidiary findings are inconsistent with its ultimate finding of undue preference and prejudice 53

(a) The record does not warrant, and the Commission's findings preclude, a finding that articles move, or even that articles generally move both within Official Territory and into Official Territory on non-uniform class rates and that class rates differences therefore result in actual differences in shipping charges.... 54

(b) The record does not warrant, and the Commisison's subsidiary findings preclude, a finding that differences between class rates within and class rates into Official Territory result in injury 58

(c) The record does not warrant, and the Commission's subsidiary findings preclude, a finding that differences in transportation conditions do not justify differences between class rates into Official Territory 65

Cost Differences 66

Traffic Consist Differences 68

2. The Commission's order, which fails to provide the carriers with alternative methods of removal of preferences and prejudice, would be invalid as a remedy for a Section 3 violation even if such violation had been shown to exist 73

Page

Point Three 81

The District Court Erred In Dismissing The Petition of the Plaintiffs Below, and in Refusing To Issue an Order Permanently Enjoining Enforcement of The Commission's Ad Interim Order 81

Appendix 85

Supreme Court of the United States

OCTOBER TERM, 1946

No. 344

HORACE A. HILDRETH, GOVERNOR OF THE STATE
OF MAINE, CHARLES M. DALE, GOVERNOR OF
THE STATE OF NEW HAMPSHIRE, ET AL.,
Appellants,

vs.

THE UNITED STATES OF AMERICA,
INTERSTATE COMMERCE COMMISSION, ET AL.

BRIEF ON BEHALF OF APPELLANTS

OPINION OF THE COURT BELOW

The opinion of the Court below is reported at 65 Federal Supplement 856.

STATEMENT AS TO JURISDICTION

The above-entitled proceeding is an appeal from the final decree and order of the District Court of the United States for the Northern District of New York in two proceedings brought to enjoin, set aside and annul a certain order of the Interstate Commerce Commission. Section 210 of the Judicial Code (U.S.C., Title 28, Section 47a) confers jurisdiction upon this Court to review final judgments or decrees of District Courts in such cases upon direct appeal.

STATEMENT OF THE CASE

In this proceeding this Court is asked to review the final decree and order of the District Court of the United States for the Northern District of New York, entered May 27, 1946 and entitled—Final Decree and Order Continuing Interlocutory Injunction—which decree and order dismissed petitions filed in two proceedings before said District Court (a) by the States of New York, Delaware, Indiana, Maryland, Michigan, New Jersey, Ohio and Wisconsin and the Commonwealth of Pennsylvania (hereinafter called the Northern States) and (b) by The Atchison, Topeka & Santa Fe Railway Co. and thirty-one other Western railroad companies (hereinafter called the Western railroads) respectively, asking that a certain report and order of the Interstate Commerce Commission (hereinafter called the Commission) be permanently enjoined, set aside, and forever annulled. While the District Court granted an interlocutory injunction forbidding enforcement of the Commission's order during the pendency of the proceedings in the District Court, and while it has continued that interlocutory injunction pending the final determination of the issues by this Court, it has declined to enter an order permanently enjoining enforcement of the Commission's order.

Appellants in this proceeding (Case No. 344) participated in the proceedings before the District Court as plaintiffs-interveners, and their appeal to this Court from said final decree and order was allowed on June 25, 1946, concurrently with the appeals of the Northern States and the Western railroads, appellants in Cases numbered 343 and 345. (R. 1465, 1474, 1483) The three proceedings have now been consolidated for hearing, and a single record has been printed.

The report and order of the Commission which appellants* sought to have enjoined, set aside and annulled by the District Court are the report and order of the Commission dated May 15, 1945 and, as amended, October 30, 1945, in two investigation proceedings—*Class Rate Investigation, 1939* (Docket No. 28300)—and—*Consolidated Freight Classification* (Docket No. 28310). The Commission's report and supplemental report (modifying its original report) are reported officially at 262 I.C.C. 447, and 264 I.C.C. 41 respectively and appear at pages 62 to 381 and 432 to 483 of the record herein.

The Commission has found, in its report, that railroad class rates must, as a matter of law, be made uniform throughout all that portion of the United States which lies east of the Rocky Mountains and that, notwithstanding the very widespread and substantial differences in transportation conditions which prevail throughout the area, such railroad class rates will be lawful in the future only if they are uniform. The Commission's order requires the railroads to take steps toward achieving such uniformity by increasing all class rates in the Northeastern portion of the United States by 10% and reducing all class rates in the South and West (as well as all class rates between regions) by 10%. (R. 384-5) Appellants have attacked the Commission's report and order as based upon an erroneous theory as to the law, as not supported by the Commission's subsidiary findings of fact or by the evidence and as inconsistent with, and wholly improper in view of the subsidiary findings of fact which the record required and the Commission itself made.

Preliminary factual matters, the understanding of which is essential to an understanding of the issues herein, include a description of class rates, of the extent to which class rates are now uniform, of the relationship between class rates and other types of rates, and of the relative levels of class rates and of all rates applicable east of the Rocky Mountains. These matters will be considered at the outset.

---

* Unless otherwise is indicated references in this brief to appellants include appellants in cases numbered 343 and 345, which are to be heard with this proceeding.

CLASS RATES

The class rate method of rate publication, which was devised as a means of publishing rates for all commodities for all distances in relatively compact form entails two procedures—(a) the preparation of a freight classification, which assigns the articles of freight, for which rates are to be published, into classes, grouping in the same class, in so far as possible, all articles of freight having similar transportation characteristics, and (b) the establishment of a distance or mileage scale of rates for one of those classes. A form of mileage scale appears as Appendix 10 to the report of the Commission (Rep. 766; R. 381).* All articles of freight assigned to the class for which the mileage scale is established (which is invariably first class or Class 100) are charged the rates set forth in the scale. Rates for all other classes are either fixed percentages or fixed multiples of the first class or scale rates. A shipper who wishes to know the class rate for transporting his particular goods a given distance, 200 miles for example, need only consult the freight classification tariff, to find the class to which his commodity is assigned, and then the distance scale to find his actual class rate. Thus, if the article is assigned to first class, the shipper's rate is the full scale rate, which for 200 miles might be 80¢ per 100 lbs. If the article were assigned to fourth class in official territory (which is charged only 50% of the first class rate) the shipper's rate would, of course, be only 40¢. Virtually all articles of commerce are included in the more than 20,000 items listed in the railroads' present freight classification tariff, and therefore have published class rates.

---

* For the convenience of the Court, each reference to the Commission's decision will include a reference to the page of its decision as reported in 262 I.C.C. (preceded by the abbreviation—Rep.—) or its supplemental report in 264 I.C.C. (preceded by the abbreviation—Supp. Rep.)

These class rates may be and commonly are superseded by lower rates of other types (as is hereinafter pointed out).

THE EXTENT OF PRESENT CLASS RATE UNIFORMITY

Class rates are, for the most part, and at the present time, uniform within two of the three well-defined broad areas of the country, which are known as territories for railroad rate-making purposes, and within each of the three zones of the third broad area.

These territories are—(1) Official Classification Territory (or Official Territory) comprising generally that part of the United States which lies east of the Mississippi River and north of the Ohio and Potomac Rivers, and including the six New England States; (2) Southern Classification Territory (or Southern Territory) comprising that part of the United States lying east of the Mississippi River and south of the Ohio and Potomac Rivers and (3) Western Classification Territory (or Western Territory) comprising that part of the United States lying west of the Mississippi River.* Western Territory, as so defined, of course, includes the southwestern part of the United States, which is sometimes separately designated as Southwestern Territory.

---

* The line separating Official and Western Territories follows the Mississippi River north as far as the southwestern corner of Wisconsin, from which point it crosses the State of Wisconsin diagonally to Milwaukee, Wisconsin and thereafter follows, northerly, the western shore of Lake Michigan. (Rep. 457, R. 72). Actually, therefore, all of Minnesota, a large part of Wisconsin and the Upper Peninsula of Michigan are in Western Territory. Other than in this one respect, the areas comprising the three territories are substantially as stated.

Insofar as freight classification is concerned, complete uniformity exists territorially. Thus, the railroads in Official Territory publish and maintain a single freight classification for uniform application throughout Official Territory. The carriers in Southern Territory and Western Territory, respectively, maintain separate classifications which apply uniformly throughout their respective territories. (Rep. 457, R. 72) For purposes of convenience of shippers and carriers, the three classifications are combined in one volume, which is known as the Consolidated Freight Classification. (R. 4, 823)

Class rate uniformity does not cross territorial boundaries at the present time, and substantial differences exist as between class rates in one territory and class rates in another territory. Such differences result in part from differences in freight classification but principally because the applicable mileage scale rates are so substantially different. (Rep. 744, R. 359)

So also, interterritorial class rates applicable to the movement of class-rate traffic between territories differ from the intraterritorial class rates applicable to movement within any particular territory. The former are governed, as to classification, by either the classification of the origin territory or that of the destination territory (and the railroads' tariffs indicate the governing classification) and, as to rates, generally speaking, by formulae which the carriers have devised, or which the Commission has prescribed, which blend the distance scales of the territories through which the traffic moves. (Rep. 476, R. 91; Rep. 526-36, R. 141-151)

Economic considerations arising out of the manner in which the nation's rail transportation system has developed explain fully the fact of general uniformity of class rates within each of the major rate territories and general nonuniformity of class rates on any broader basis. The railroads of this country developed, expanded and now operate within regional lines which conform closely to present territorial boundaries. (R. 3621-23) Thus, the northern railroads, in the course of their development, frequently extended their lines to, but seldom below, the Ohio or Potomac Rivers, and the southern railroads were seldom extended northward across these rivers. Very few railroads in either area extended their lines further west than, at most, west bank crossing points on the Mississippi River. Western railroad development, on the other hand, was concentrated west of the Mississippi River. This same regionalization of development characterized the period of raiload mergers and consolidations. The great system lines carriers which emerged from that period emerged and now operate, not as transcontinental railroads, and rarely as interregional railroads, but in virtually all cases as extensive systems in and throughout either the North, the South or the West. Generally speaking, the most extended lines of each of these systems reach to, but not beyond, the major geographic barriers which are now recognized as territorial boundaries. (R. 3622)

Because the railroads have developed and now operate along the regional lines referred to, it is feasible for them now to maintain substantial regional uniformity of rates in Official and Southern Territories, and uniformity throughout extensive zones in Western Territory. Railroads, like other business enterprises, are required, in fixing their charges, to take primarily into account the conditions which prevail in the areas in which they operate. If the carrier's territory of operation is wide and extensive so that varying conditions are encountered, the carrier's rates may, of course, be so made as to meet the average of these conditions. But whatever the area of operations, if the conditions prevalent in that area are not observed, the carriers' rates will be either too low to produce adequate revenues or too high to permit the free flow of traffic by rail. At the outset, and prior to the period of expansion and merger, this practical necessity of relating railroad rates to conditions experienced in operations led to many and wide divergencies between rates in the various sections of the country, as the different carriers sought to reflect, in their rates, the widely differing conditions which they encountered in their own limited operations. (R. 3621) Later, as the large system railroads developed, and commenced operating throughout the wide areas which are now called territories, it became feasible for these carriers to take account of the average of all conditions affecting transportation in their territory and to publish rates based thereon which would be uniform throughout the territory. (R. 3622)

Uniformity of rates on any broader basis than the territorial basis, however, has not been achieved, due to the circumstance that conditions in the different rate territories vary, and that no carrier or group of carriers is in a position to average out such differences. (R. 3623) The Commission recognized this when it prescribed the class rates which it now finds unlawful (Rep. 516-7; R. 131-2) and as the late Commissioner Porter pointed out in his dissenting opinion to the Commission's report:

> "Throughout the history of its regulation, the Commission has consistently recognized what is still the fact, namely, that conditions in the various rate territories differ with respect to the volume and kind of traffic transported, the distribution of the rate burden, and the revenue needs of the railroads. These and other factors have resulted in the maintenance of different rate territories, the boundaries of which have been determined largely by the basic fact that, in general, the rails of the carriers within the respective territories do not extend beyond their borders, and in the establishment of different rate levels within those territories." (Rep. 712; R. 327)

THE RELATIONSHIP BETWEEN CLASS RATES AND OTHER TYPES OF RAILROAD RATES

In addition to class rates, the railroads publish exception rates and commodity rates, both of which, generally speaking, are lower than class rates, and both of which move substantially greater volumes of traffic than class rates. Exceptions and commodity rates are special "reduced" rates which the railroads establish, sometimes over a wide area, and at other times within a very limited area, in order to attract traffic or to hold traffic which would use other types of transportation rather than pay the class rates. Thus, exception and commodity rates are established where the volume of traffic is unusually heavy (as for example in the case of automobiles from Detroit), where motor truck or water competition is a transportation factor, and where required to enable shippers to meet the competition of other manufacturers in remote markets.

Exception rates are very similar to class rates and are almost always upon the same mileage scales as the class where motor truck or water competition is a transportation rates. (Rep. 549, R. 164) They are called exception rates because they result from the railroad's creating exceptions to the standard or regular classification. Thus, an article regularly assigned to first class may, by the publication of a so-called exception tariff, be assigned to third class in a certain area, or between two points, or in one direction between those two points. Wherever the exception applies, of course, the higher class rate is superseded and becomes a mere "paper" rate.

Commodity rates follow no single specific pattern. They are, essentially, specific rates for particular hauls on individual commodities. Some commodity rates apply only in one direction between two points ten miles apart. Others apply to all movements of the particular commodity within a territory and are based upon mileage scales, either the class rate scale or a special commodity scale. Commodity rates, like exception rates, to the extent applicable, generally supersede and are lower than the regular class rates, the latter becoming merely paper rates. (Rep. 476, R. 91) The only commodity rates which move substantial amounts of traffic and yet do not supersede regular class rates are commodity rates which are published for the relatively few articles which are not listed in the Consolidated Freight Classification and which, therefore, do not have regular published class rates.

In all territories, the great majority of the traffic (both intraterritorial and interterritorial) moves on commodity rates. Exception rates move the next largest volume of traffic and class rates the least. (Rep. 479, R. 94) In Official Territory, approximately 5.8% of the total carload traffic moves on class rates; in the South and West the percentages are only 1.8 and .6, respectively.

The Commission's investigation did not formally extend to exception and commodity rates, and its order does not apply to them.

RELATIVE LEVELS OF CLASS RATES AND OF ALL RATES

Class rates are generally lower, mile for mile, in Official Territory than in either Southern or Western Territories, although it is impossible to determine and state accurately the exact difference in levels. For example, for certain distances, the Official Territory mileage scale rates are approximately 30% higher than the Southern Territory scale rates, but for other distances, the difference may be either greater or less. (Rep. 475, R. 90) So also, it is necessary to take into account the effect of classification differences, for the assignment of particular commodities to lower classifications in the South or West than the same commodities enjoy in Official Territory necessarily reduces and may eliminate the rate difference indicated by a comparison merely of the distance scales. (Rep. 474, R. 89)

Because interterritorial class rates reflect, generally, a blending of the class rate levels of more than one territory, these rates between Official Territory and other territories are generally somewhat higher than Official Territory intraterritorial class rates and somewhat lower than intraterritorial rates in the other territories. (Rep. 476, R. 91)

While class rates are thus generally somewhat lower in Official Territory and to and from Official Territory than in either the South or the West, it cannot seriously be disputed that both the South and West have the benefit of unusually favorable exception rates and commodity rates. While the Commission's investigation did not comprehend exception and commodity rates as such and while the record is not complete as to specific rates in these categories, both the record and the Commission's report afford ample indication that the exception and commodity rates in the South, at least, are commonly lower than such rates in Official Territory. Thus, the Commission itself recognized in its report (Rep. 593, R. 208) that in many instances commodity rates are lower in the South than the rates applicable to the same articles in Official Territories. It then proceeds to consider in detail certain types of traffic for which commodity rates in the South are lower, and substantially lower. These commodities include brick, fertilizer, and fertilizer materials, coke, lime, logs, lumber, pig iron, pulpwood, sand, gravel, crushed stone, slag, iron or steel scrap, sulphuric acid, and iron ore—commodities which move in very heavy volume in the South.

The record discloses and the Commission has found that the level of all rates in the South exceeds the level of all rates in Official Territory by only about 4%. (Rep. 606, R. 221)

THE COMMISSION'S REPORT AND ORDER

The order of the Commission which appellants sought to have enjoined and set aside by the District Court was entered at the conclusion of the Commission's investigation proceedings, hereinbefore referred to, and was an ad interim order so-called. Its purpose was to accomplish and achieve temporarily a portion of the results which the findings in its report indicate to be the Commission's ultimate goal—namely, uniformity of all classification ratings and class rates throughout the nation. Said order directed the railroads serving in Official Territory to increase forthwith by 10% (from their then level) all class rates applicable within Official Territory; directed all railroads serving in Southern and Western Territories to decrease forthwith by 10% (from their then level) all class rates applicable within those respective territories (except rates applicable in Western Territory west of the Rocky Mountains), and directed all railroads participating in transportation between the various territories to decrease forthwith by 10% (from their then level) all class rates applicable to such interterritorial movement. (R. 385)

While the Commission entered no order requiring railroad action with respect to the unification of classification ratings, it indicated an intention to do so if the railroads should fail to undertake such action voluntarily. The Commission's action in this respect explains in part its ad interim order, and it is therefore essential to consider the Commission's ultimate findings with respect to both classifications and class rates.

The Commission's ultimate findings with respect to the Consolidated Freight Classification were that the present classifications, to the extent they are not uniform, are unlawful in violation of Sections 1 and 3 of the Act; that it would be feasible for the railroads to establish a uniform classification, and that such a uniform classification would be just and reasonable. The railroads were thereupon "given reasonable opportunity to initiate such uniform classification by their own collective action before we undertake the task." (Rep. 511, R. 126)

The Commission's ultimate findings with respect to class rates were that all such class rates, intraterritorial and interterritorial, east of the Rocky Mountains were unjust and unreasonable in violation of Section 1 of the Act, and that the relationship between the Official Territory rates, on the one hand, and the interterritorial rates applicable to Official Territory from each of the other territories, on the other hand, was unlawful in violation of Section 3 of the Act.

Numerous parties to the proceedings before the Commission (including appellants in this proceeding) filed petitions requesting rehearing, reargument and/or reconsideration by the Commission of its report and order. These petitions were, except as to formal matters, denied by the Commission by its order dated October 30, 1945. (R. 482-3)

THE ACTION OF THE DISTRICT COURT

Following the refusal of the Commission to reconsider its ad interim order, the appellants, Northern States and Western railroads, filed with the District Court their petitions for an order enjoining, setting aside and annulling the order of the Commission.

The District Court, at appellants' request and after hearing and notice, entered an interlocutory injunction on December 20, 1945 staying enforcement of the Commission's order pending further order of the Court. (R. 805)

On May 9, 1946, the District Court announced its decision that the petitions should be dismissed. (R. 1411) Appellants moved for continuance of the interlocutory injunction pending final determination of their appeals to this Court, (R. 1441, 1445, 1449) and these motions were allowed, the District Court concluding as a matter of law:

> "1. The decision of these consolidated causes necessarily involves the determination of novel questions of law of great importance to the shippers, the carriers, and the public of this country. There are reasonable and serious doubts as to the determination of these novel and important questions.

> 2. Considering the reasonable doubts as to the validity of the orders of the Interstate Commerce Commission herein, the novel character of the questions of law to be determined, the fact that the present class rates were established by the Interstate Commerce Commission itself and have been in effect for many years, and considering the equities of the shippers, the carriers, and the public, the Court in its discretion should continue the interlocutory injunction pending the perfecting and final determination of any and all appeals from the final order of the Court herein." (R. 1452)

The final decree and order of the District Court was entered on May 27, 1946, and appellants' appeals to this Court were allowed by said District Court on June 25, 1946. (R. 1465, 1474, 1483)

FURTHER ACTION OF THE COMMISSION DURING THE PENDENCY OF THESE APPEALS

Since the docketing of the appeals in this proceeding, the Commission has issued a final report and order in proceedings entitled—*Increased Railway Rates, Fares and Charges,* 1946—and—*Increased Railway Rates, Fares and Charges,* 1942 (numbered 162 and 148, respectively, in the Ex Parte dockets of the Commission), authorizing certain general freight rate increases throughout the United States, including increases of 25% in Official Territory intraterritorial class rates, increases of 20% in class rates within the South and West and of 22½% in class rates applying between points in Official Territory and points outside thereof. A copy of the order of the Commission in said proceeding and of the Commission's ultimate findings and conclusions as set forth in its report therein appear in the Appendix hereto.

In so far as intraterritorial class rates within the South and West and all interterritorial class rates are concerned, of course, the 1945 orders of the Commission (requiring 10% reduction in said rates from the 1945 level in effect when the orders were made) are completely inconsistent with the Commission's 1946 order authorizing 20% and 22½% increases in those same rates. Thus, whereas the Commission found in the Class Rate Investigation proceeding (the subject matter of this appeal) that all Southern, Western and interterritorial class rates were *unreasonably high* and would be unlawful *unless reduced 10% below their May 15, 1945 level,* the Commission has now found, in the general increase proceeding (hereinafter referred to as Ex Parte 162) that these same rates which it had previously ordered reduced may now lawfully and properly *be increased by 20%* (and 22½% interterritorially between Official Territory and other territories) over the level at which such rates were maintained on May 15, 1945.

The situation with respect to the Official Territory rates is just as confusing. The Commission has now authorized increases of 25% in Official Territory class rates. It had previously *ordered* increases of 10%, but such ordered increases had been stayed by order of the District Court. It would appear from the report of the Commission in Ex Parte 162 that, if the Commission's 1945 order requiring 10% higher class rates in Official Territory were now to become effective, the Commission's subsequent 25% permissive increase would become applicable to the rates as so increased by 10%. If this interpretation be correct, the railroads would be required to maintain Official Territory class rates at not less than 110% of their May 15, 1945 levels and would be permitted to maintain rates 25% higher than such increased rates, or 137½% of their 1945 levels.

SPECIFICATION OF ERRORS

Appellants in this Case No. 344 specify as the assigned errors which they intend to urge, the following errors, being the errors set forth in their Assignment of Errors upon which this appeal was taken (R. 1468) and adopted as their statement of points to be relied upon in this Court (R. 1521).

1. The District Court erred in dismissing the petitions of the plaintiffs in said proceedings.

2. The District Court erred in ruling that the ad interim order of the Interstate Commerce Commission (hereinafter called the Commission) entered May 15, 1945, as amended by the order of the Commission entered October 30, 1945, in the proceeding entitled—*Class Rate Investigation, 1939*—and numbered 28,300 in the dockets of the Commission (said order entered May 15, 1945, as so amended, being hereinafter called the order of the Commission), is lawful and valid.

3. The District Court erred in holding

> "that the Commission correctly decided that the ad interim order under review was within the scope of its statutory power." (P. 27)

4. The District Court erred in failing to rule that the order of the Commission, in so far as it directed an increase in Official Territory intraterritorial class rates, is unlawful and invalid (a) in that such order lacks the support of necessary and adequate preliminary findings of fact, (b) in that the subsidiary findings of fact which the Commission has made are contrary to the ultimate conclusions of the Commission and preclude the making of the preliminary findings of fact which would be necessary to support the order of the Commission, and (c) in that the evidence would not have permitted or supported the making of such necessary and adequate preliminary findings of fact.

5. The District Court erred in ruling implicitly, (a) that the lack of adequate and necessary preliminary findings does not render the order of the Commission invalid, and

(b) that the only test of the validity of said order is whether it is supported by substantial evidence.

6. The District Court erred in finding that the facts found by the Commission are supported by substantial evidence, in adopting such findings of fact as findings of the District Court, and in finding that there was substantial evidence to support such findings as the Commission made.

7. The District Court erred in failing to rule that the order of the Commission, in so far as it directs an increase in Official Territory intraterritorial class rates, which the evidence and the preliminary findings of the Commission show to be profitable, is inconsistent with and violative of Section 15a (2) of the Interstate Commerce Act, which requires the Commission, in determining just and reasonable rates, to give due consideration to the need, in the public interest, of adequate and efficient railway transportation service at the lowest cost consistent with the furnishing of such service.

8. The District Court erred in failing to rule that the order of the Commission, in so far as it directs an increase in Official Territory intraterritorial class rates, cannot be sustained as a valid order remedying a Section 1 violation.

9. The District Court erred in ruling that it might not properly set aside an order of the Commission requiring increases in rates which are within the so-called zone of reasonableness between reasonable minimum and reasonable maximum rates.

10. The District Court erred in failing to rule that the Commission's finding that intraterritorial class rates within Official Territory are unjust and unreasonable in violation of Sections 1 (4) and 1 (5) of the Interstate Commerce Act is not a valid and proper finding, but a mere conclusion

which not only is lacking the support of necessary and adequate preliminary findings but is in fact inconsistent with and contrary to the findings which the Commission has made and to the evidence before the Commission.

11. The District Court erred in failing to rule that a finding that rates are unjustly and unreasonably low, in violation of Section 1 of the Act, must, to be valid, be based upon a subsidiary finding, supported by evidence, either that such rates are noncompensatory and so low as to burden other traffic, or that the continuance of such rates will be likely to result in a rate war or otherwise be harmful, from a revenue standpoint, to the carrier publishing the rates or to other and competing carriers.

12. The District Court erred in failing to rule that an order of the Commission, directing increases in rates by reason of a conclusion of a violation of Section 1 of the Act, must be based not only upon a valid finding that such rates are unjustly and unreasonably low but also upon a finding, supported by evidence, that rates lower than the rates required to be established pursuant to the Commission's order either would be noncompensatory and so low as to burden other traffic or would be likely to result in a rate war or otherwise be harmful, from a revenue standpoint, to the carrier publishing the rates or to other and competing carriers.

13. The District Court erred in failing to find that the Commission has not made, and that the evidence would not support any of the preliminary findings of fact required to support a finding that Official Territory intraterritorial class rates are unjustly and unreasonably low in violation of Section 1 of the Act, but that it has, on the contrary, made particular findings of fact which are inconsistent with and contrary to its ultimate finding as aforesaid.

14. The District Court erred in failing to rule that the order of the Commission, in so far as it directs an increase in Official Territory intraterritorial class rates, cannot be sustained as a valid order remedying a Section 3 violation.

15. The District Court erred in failing to rule that the provisions of the Transportation Act of 1940 effect no change in the substantive law with respect to the elements of proof of undue preference and prejudice, and that preliminary findings of fact which were essential to the validity of an ultimate finding of undue preference of and prejudice against an entity entitled to protection against prejudice, prior to the enactment of said 1940 Act, continue to be essential to the validity of such an ultimate finding.

16. The District Court erred in ruling that the absence of the preliminary findings which the Court finds to have been held essential to be proved to establish a basis for findings of preference or prejudice or discrimination as to rates before the 1940 amendment of Section 3(1) of the Act, does not now invalidate a finding of preference and prejudice.

17. The District Court erred in failing to rule that the Commission's finding that Official Territory intraterritorial class rates and class rates into Official Territory from other territories are unduly preferential of Official Territory as a whole and of the shippers and receivers of freight located therein and unduly prejudicial to Southern, Southwestern and Western Territories as a whole and shippers and receivers of freight located therein, in violation of Section 3 of the Act, is not a valid and proper finding, but a mere conclusion which not only is lacking the support of adequate and preliminary findings, but is in fact inconsistent with and contrary to the findings which the Commission has made and is not supported by the evidence.

18. The District Court erred in failing to rule that the order of the Commission is invalid and unlawful, in so far as it rests upon the Commission's ultimate finding of undue preference and prejudice (a) in that such an ultimate finding must be based upon a preliminary finding that the allegedly unlawful rates are charged on the same types of freight or the freight of competing shippers, (b) in that the Commission has not made, and the evidence will not support, such a finding and (c) in that other preliminary findings which the Commission has made preclude the making of such preliminary finding which is necessary to the validity of its ultimate finding and therefore its order.

19. The District Court erred in failing to rule that the order of the Commission is invalid and unlawful, in so far as it rests upon the Commission's ultimate finding of undue preference and prejudice (a) in that such an ultimate finding must be based upon a preliminary finding that injury results or will result to the allegedly prejudiced territories or the shippers and receivers of freight therein, by reason of the continued maintenance of the allegedly unlawful rates, (b) in that the Commission has not made, and the evidence will not support such a finding and (c) in that other preliminary findings which the Commission has made preclude the making of such preliminary finding which is necessary to the validity of its ultimate finding and therefore its order.

20. The District Court erred in failing to rule that the order of the Commission is invalid and unlawful, in so far as it rests upon the Commission's ultimate finding of undue preference and prejudice arising from lack of territorial class rate uniformity (a) in that such an ultimate finding must be based upon a preliminary finding that transportation conditions do not justify any differences between said allegedly unlawful rates, (b) in that the Commission has not made, and the evidence will not support such a finding

and (c) in that other preliminary findings which the Commission has made preclude the making of such preliminary finding which is necessary to the validity of its ultimate finding and therefore its order.

21. The District Court erred in ruling that the Commission's order is not improper and beyond the power and authority of the Commission because of the failure of the order to afford the carriers alternative methods of removing the allegedly found discrimination.

SUMMARY OF ARGUMENT

The order of the District Court dismissing the petitions of the Northern States and the Western railroads for an order permanently enjoining enforcement of the Commission's ad interim order should be reversed and these proceedings should be remanded with instructions to the District Court to enter a permanent injunction.

The Commission's ad interim order has been vitiated by the order which the Commission entered on December 5, 1946 in Ex Parte 162, and this Court should therefore summarily reverse the District Court's order and remand the proceedings with instructions to the District Court to enter a permanent injunction. The reductions in Southern and Western class rates which are required by said ad interim order cannot stand, in view of the Commission's order in Ex Parte 162, and, as the ad interim order is integral, the order, as an entirety, cannot stand.

The ad interim order of the Commission is wholly invalid, even apart from its inconsistency with the Commission's order in Ex Parte 162, and the enforcement of such order should have been enjoined by the District Court. The Commission does not have authority to require changes in established rates unless such rates are unlawful, and no order which it enters requiring such changes is valid unless the ultimate findings of unlawfulness upon which such order rests are supported by adequate particular findings which are in turn supported by substantial evidence. While the Commission has purported to find Official Territory class rates violative of Section 1 of the Act, and to find the relationship between such rates and inter-territorial rates from other territories to Official Territory violative of Section 3 of the Act, an analysis of the record and of the Commission's report and order shows that the Commission's order cannot be supported as an appropriate correction of either a Section 1 or a Section 3 violation. Thus, while the Commission concluded that Official Territory class rates were less than just and reasonable rates in violation of Section 1, it made no findings which support this conclusion. The record does not permit such findings, and other findings which the Commission has made are inconsistent with and preclude such findings. The same is true with respect to the Commission's conclusions and findings concerning a Section 3 violation. The Commission has misconstrued the 1940 amendment to Section 3(1) of the Act as a Congressional mandate to establish uniformity, or near uniformity, as a new standard of lawfulness, and on that basis the Commission has made an ultimate finding of a Section 3 violation. This ultimate finding, however, when examined in the light of established regulatory principles, is not only wholly unwarranted, but is also inconsistent with and precluded by the Commission's preliminary findings. The Commission's order would be further objectionable as an order to correct a violation of Section 3 (even if such violation could be found to exist) because the order fails to afford the carriers alternative methods of removing the alleged "undue preference and prejudice."

ARGUMENT

Point One

The Commission's Ad Interim Order, which the District Court Refused to Enjoin, Set Aside and Annul, Has Been Vitiated by the Order which the Commission Entered on December 5, 1946 in Ex Parte 162, and this Court Should Therefore Summarily Reverse the Order of the District Court and Remand the Proceedings with Instructions to the District Court to Issue a Permanent Injunction.

The Commission's ad interim order, which appellants sought to have the District Court enjoin, is obviously an integral order. Said order concerns the relationship between class rates in Official Territory and all other class rates, and, if permitted to become effective, would alter the relationship by altering all such class rates. Any order which is concerned with the relationship of rates is necessarily integral. When the order itself directly affects all of the rates which create the relationship the integral character of the order is obvious.

The Commission's ad interim order in the Class Rate Investigation proceeding, in so far as it ordered reductions in Southern and Western class rates, can no longer stand. In the Class Rate Investigation proceeding, the Commission found that maximum reasonable class rates in the South and West were ten percent lower than the rates then in effect, namely, the rates of May 15, 1945, and ordered that the rates be reduced to maximum reasonable rates as so found. In Ex Parte 162, decided December 5, 1946, the Commission concluded that maximum reasonable class rates in the South and West were 20% higher than the class rates in effect on May 15, 1945. It is obvious that an order cannot now be sustained which, for example, directs a reduction in a 100¢ rate to 90¢ on the ground that 90¢ is the maximum reasonable rate, when the Commission has subsequently made clear that a rate substantially in excess of 100¢ is the maximum reasonable rate. So far as the ordered reduction rests on a finding of a Section 1 violation (namely, maintenance of rates in excess of reasonable maxima) the subsequent finding in Ex Parte 162 shows that the first finding no longer may be relied upon. The ordered reduction cannot rest on a finding of a Section 3 violation because *neither Western nor Southern class rates have been found to be prejudicial.* Moreover, in so far as the order in the Class Rate Investigation proceedings seeks to correct any preference and prejudice, it starts a change in relationship on the assumption of its finding (no longer acceptable) that maximum reasonable class rates in the South and West are rates 10% lower than those in effect on May 15, 1945. *Inasmuch as the ordered reduction in Southern and Western class rates was premised exclusively on a finding that those rates exceeded maximum reasonable class rates by 10%, it now being apparent from the Commission's subsequent action that those rates are in fact materially less than maximum reasonable class rates, the ordered reduction cannot stand and as the order is integral, the order as an entirety cannot stand.*

This Court clearly has the power to consider the effect of the Commission's action in Ex Parte 162, and, on the basis thereof, to enter a summary order reversing the final order of the District Court and directing said Court to enter the permanent injunction which the Northern States and Western railroads originally requested. As Mr. Justice Brandeis said, speaking for the Court in *Watts, Watts & Co., Ltd.* v. *Unione Austriaca Di Navigazione,* 248 U. S. 9, 21 (1918):

> "This Court, in the exercise of its appellate jurisdiction, has power not only to correct error in the judgment entered below, but to make such disposition of the case as justice may at this time require. *Butler* v. *Eaton,* 141 U. S. 240; *Gulf, Colorado & Santa Fe Ry. Co.* v. *Dennis,* 224 U. S. 503, 506. And in determining

what justice now requires the court must consider the changes in fact and in law which have supervened since the decree was entered below. *United States* v. *Hamburg-Amerikanische Packetfahrt-Actien Gesellschaft*, 239 U. S. 466, 475, 498; *Berry* v. *Davis*, 242 U. S. 468; *Crozier* v. *Krupp*, 224 U. S. 290, 302; *Jones* v. *Montague*, 194 U. S. 147; *Dinsmore* v. *Southern Express Co.*, 183 U. S. 115, 120; *Mills* v. *Green*, 159 U. S. 651; *The Schooner Rachel* v. *United States*, 6 Cranch 329; *United States* v. *The Schooner Peggy*, 1 Cranch 103, 109-110."

and see also:

Patterson v. *Alabama*, 294 U. S. 600, 607 (1934)

Villa et al v. *Van Schaick*, 299 U. S. 152, 155 (1936)

That supervening decisions and orders of the Interstate Commerce Commission fall within the purview of Mr. Justice Brandeis' remarks, is clear from the decision of this Court in *Ziffrin, Inc.* v. *United States*, 318 U. S. 73, 79 (1942). Moreover, where, as in this case, it is clear that the change in circumstances is controlling and that further proceedings below would be of no avail, this Court has reversed the judgments below and remanded the cases to the lower court with directions to enter judgment for the party entitled thereto.

and see

Ballard v. *Searls*, 130 U. S. 50 (1889)

POINT TWO

THE AD INTERIM ORDER OF THE COMMISSION REQUIRING A 10% INCREASE IN OFFICIAL TERRITORY CLASS RATES IS INVALID, AND THE DISTRICT COURT ERRED IN REFUSING TO ENTER AN ORDER ENJOINING, SETTING ASIDE, AND ANNULLING SAID ORDER.

A. *The Commission Has no Authority to Require Changes in Established Rates unless Such Rates are Unlawful.*

That the Commission is without authority to condemn, or require changes in, existing rates unless such existing rates are properly found to be unlawful is well established. Both the courts and the Commission have long recognized that it is not the function of the Commission to serve as traffic manager for the railroads. The initiative in matters affecting rate levels and structures lies with the carriers. If the rate structures which they evolve are just and reasonable, are free from undue preference or prejudice and are otherwise lawful, the Commission is not authorized to substitute its judgment for that of the carriers with respect to the appropriate level of any particular rate or group of rates. Recognition of this inherent limitation upon the Commission's grant of authority has been widespread and repeated. As this Court said, in *Interstate Commerce Commission* v. *Chicago G. W. Ry.*, 209 U.S. 108 (1908),

> "It must be remembered that railroads are the private property of their owners; that while from the public character of the work in which they are engaged the public has the power to prescribe rules for securing faithful and efficient service and equality between shippers and communities, yet in no proper sense is the public a general manager . . .
>
> "'Subject to the two leading prohibitions that their charges shall not be unjust or unreasonable, and that they shall not unjustly discriminate so as to give undue

> preference or disadvantage to persons or traffic similarly circumstanced, the act to regulate commerce leaves common carriers, as they were at the common law, free to make special rates looking to the increase of their business, to classify their traffic, to adjust and apportion their rates so as to meet the necessities of commerce and of their own situation and relation to it, and generally to manage their important interests upon the same principles which are regarded as sound and adopted in other trades and pursuits.' " (Pp. 118-9)

and as the Commission itself recognized in *Lumber from Pacific Coast to Eastern Points*, 210 I.C.C. 317 (1935),

> "The respondents (railroads) may be mistaken in their judgment as to the effect of those reductions, but that fact is not determinative of the lawfulness or unlawfulness of the rates in question. They are entitled, as a matter of right, to make the experiment unless upon this record we can say that their action or its probable results will violate some provision of the act." (P. 346)

B. *An Order of the Commission is Invalid Unless the Ultimate Findings upon which Said Order Rests are Supported by Adequate Particular Findings which in Turn are Supported by Substantial Evidence.*

This Court has made clear, in earlier decisions, the standards to which an order of the Commission must conform in order to be sustained as a valid order.

Such order of the Commission, to be valid, must contain not only ultimate findings, but also particular findings which warrant the ultimate findings, and these particular findings must be supported by substantial evidence. The necessity for appropriate ultimate findings was pointed out in *United*

States v. *Chicago, Milwaukee & St. Paul R.R. Co.*, 294 U.S. 499 (1935) as follows:

> "This court has held that an order of the Interstate Commerce Commission is void unless supported by findings of the basic or quasi-jurisdictional facts conditioning its power. *Florida* v. *United States*, 282 U.S. 194, 215; *United States* v. *Baltimore & Ohio R. Co.*, 293 U.S. 454. (P. 504)

But appropriate ultimate findings are not sufficient. Parties are entitled to know how those findings are arrived at in order that they may determine whether the Commission erred in its application of the law and whether its conclusions are supported. In this connection the Court pointed out in the *Milwaukee* case,

> "The second report of the Commission is a long and discursive narrative. Two paragraphs at the end give the key to its meaning (200 I.C.C. 621, 622): . . .
>
> "The statement in the second of these paragraphs that the proposed rates would be 'unreasonable' must be read in the light of the report as a whole, *and then appears as a conclusion insufficient as a finding unless supported by facts more particularly stated.*" (Emphasis supplied) (pp. 505-6)

That the evidence must lend substantial support to the findings needs no citation of authority.

In view of the foregoing, it is obvious that an order of the Commision is invalid if the Commission's findings of fact are inconsistent with its ultimate findings and its order.

C. *The Commission's Ad Interim Order Requiring a 10% Increase in Official Territory Class Rates Cannot be Sustained as a Valid and Appropriate Correction of a Violation of Section 1 of the Act.**

The Commission's order in this proceeding requiring an increase in Official Territory class rates cannot be sustained as a valid order for the correction of a Section 1 violation because the Commission has not made a proper and valid finding that such rates are violative of Section 1 and its subsidiary findings preclude such a finding.

1. *Rates are not unreasonably low, in violation of Section 1 of the Act, unless they are either noncompensatory, or otherwise threaten to have harmful effects upon the revenues and therefore the transportation efficiency of the carriers which maintain such rates or of other and competing carriers.*

a. *The law was such prior to the legislation of 1940:*

---

* In Point One of this brief it was pointed out that the Commission's order here under consideration is integral and has been wholly vitiated by the Commission's action and findings in Ex Parte 162. The remainder of this brief is devoted to argument that, wholly apart from said order in Ex Parte 162, the Commission's ad interim order cannot be sustained under either Section 1 or Section 3 of the Act, the only sections which the Commission "found" violated. (Rep. 700-702, R. 315-317) This portion of the argument dealing with the Commission's Section 1 finding, is concerned only with that portion of the Commission's order which required increases in Official Territory class rates, and which will, if sustained, provide the basis for higher than present class rates in Official Territory under the Commission's Ex Parte 162 order. The invalidity of that part of the order which required reductions in Southern, Western and interterritorial rates has already been considered.

Sections 1(4) and 1(5)(a) of the Act (U.S.C., Title 49, Sections 1(4) and 1(5)(a)) insofar as pertinent, provide as follows:

> "(4) It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor, and to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; . . .
>
> "(5) (a) All charges made for any service rendered or to be rendered in the transportation of passengers or property, or in connection therewith, shall be just and reasonable, and every unjust and unreasonable charge for such service or any part thereof is prohibited and declared to be unlawful."

While the Commission in its supplemental report has purportedly "found" that Official Territory class rates are unreasonably low, such a finding is, of itself, a mere conclusion of law. The Commission's statement that Official Territory class rates are unreasonably low, to quote Mr. Justice Cardozo in *United States v. Chicago, Milwaukee & St. Paul R.R. Co.*, (supra)

> ". . . must be read in the light of the report as a whole, and then appears as a conclusion insufficient as a finding unless supported by facts more particularly stated." (p. 506)

The "facts more particularly stated" which are required to sustain a conclusion that rates are unreasonably low in violation of Section 1 of the Act are facts which show that the rates are either themselves non-compensatory and burden other traffic or threaten, because of their low level, to create a noncompensatory rate situation for other and competing carriers. While the Commission has had jurisdiction over railroad rates since 1887, it was not given authority to order increased rates until the enactment of the Transportation Act of 1920. The power then grudgingly given was given in recognition of the fact that, while inexpensive transportation is generally in the public interest, the public interest can be adversely affected by the maintenance of rates which are so low as to burden other traffic of the publishing carrier or to impair the efficiency of the national transportation system or any part of it, and that the Commission should be empowered to prevent these results. In recognition of these inherent and well-understood limitations upon the Commission's minimum rate power, it has been consistently held that a finding of a Section 1 violation cannot be sustained unless it appears that the rates claimed to be unreasonably low are noncompensatory or threaten a noncompensatory situation. Thus in *Texas & Pacific Railway Co. v United States,* 289 U.S. 627 (1933) this Court said

> "... The evidence failed to show that the rates of the Texas and Pacific and the L. R. & N. on export and import shipments to and from New Orleans were not compensatory. The Commission refused to find that they were so low as to cast a burden on other traffic. There was therefore no basis for an order fixing minimum reasonable rates under Section 15(1) of the Act." (P. 633)

and in *United States v. Chicago, Milwaukee & St. Paul Railroad.,* (supra), in holding an ordered increase invalid, this Court said

> "There is no suggestion in the report that the rates have been so reduced as to be less than compensatory ... they do not pass the minima beyond which charges are too low." (P. 506)

> "... There is not a fact to indicate that the rates so reduced will be less than compensatory or that capacity for service to the public will be impaired or put in jeopardy." (P. 507)

Counsel for the United States and for the Commission have previously cited, and will undoubtedly cite to this Court, the cases of *Jefferson Island Salt Mining Co. v. United States*, 6 F. 2d 315 (1925); *Scandrett v. United States*, 32 F. Supp. 995 (1940) or *Youngstown Sheet & Tube Co. v. United States*, 295 U.S. 476 (1940) and argue that, in each of said cases, a minimum rate order was sustained without proof or finding that the rates which the Commission ordered increased had been noncompensatory. While this proposition is literally true, there is nothing in any of said cases which casts doubt upon the proposition that a conclusion that rates are unreasonably low requires a finding either that such rates are noncompensatory or that they threaten to create a noncompensatory situation. In each case there was a finding of a threatened noncompensatory situation. In the *Jefferson Island Salt Mining* case the Court referred to the necessity of avoidance of ruinous rate wars and to the maintenance of a reasonable relation between cost of service and rates as a justification of the Commission's order. In the *Scandrett* case, the finding was that the rates condemned were so low that competing motor carriers, if they were to continue to compete, would be forced to publish ruinously destructive noncompensatory rates. Similarly, in the *Youngstown* case the Commission's concern was with the maintenance of the existing rate structure and the avoidance of a situation which would precipitate destructive and ruinous rate reductions.

If a railroad chooses to publish a particular rate, and that rate is high enough so that the railroads are compensated, high enough to permit good service without burdening other traffic of the railroad, and not so low that competing carriers will either be weakened or be forced to burden their other traffic if they try to meet the rate and continue to compete, then that rate is not unreasonably low, and the Commission has no power to order the rate increased.

The argument may be made that a rate, even if it meets all of the tests just outlined, can be found unreasonably low merely because it creates discrimination (which the rates in this case do not, as will hereinafter be pointed out), but this Court has never so held, and the proposition itself is unsound. Nothing in the *Youngstown* case warrants a claim that a rate may be found unreasonably low and higher rates prescribed merely because lower rates would create undue discrimination. It is true that the Commission found undue prejudice in the *Youngstown* case, but the finding upon which its order rested was that lower rates would tend to disrupt the entire rate structure and this Court took pains to exclude the finding of undue prejudice as a basis for the minimum rate order, saying

> "The order of the Commission was based primarily upon the unreasonableness of the minimum prescribed. The existing rate structure *furnished support for the finding of unreasonableness.*
>
> ". . . It is true the Commission found prejudice to shippers all rail, *but in essence* the order entered was a Section 15 order and not one made under Section 3." (P. 480) (Emphasis supplied)

The unsoundness of any possible claim that a rate can be found unreasonably low merely because it is discriminatory can be developed through an example. Suppose points A and B are the same number of miles from point C and that transportation conditions are the same between A and C as between B and C. Suppose further that the rate from point A to point C is $1.00 per 100 lbs. and that this rate, meeting all of the tests of reasonableness previously outlined herein, is high enough to be compensatory, warrants good service without burdening other traffic and is not so low as to embarrass competing carriers, rail or otherwise. If the carrier which charges $1.00 between A and C charges $1.25

between B and C, it discriminates in favor of A and against B. But it is the relationship between the AC-BC rates which produces the discrimination, not either of the rates by itself. It is absurd to say that because the relationship is discriminatory, the $1.00 rate is unreasonably low, and the $1.25 rate unreasonably high. Proof of such absurdity is that, if the carrier were to reduce the high rate to the level of the low rate, the discrimination would disappear and the low rate would cease being "unreasonably low". Obviously the lower rate was never "unreasonably low", for if it had been, its "unreasonableness" could not have been remedied by adjusting another and different rate.

b. *The 1940 "amendments" to the Act did not change the test of unreasonableness.*

In its report, the Commission has referred to three provisions of the Transportation Act of 1940 and has indicated its belief that its order is justified in the light of such provisions (R. pp. 688-692). These provisions are:

> (1) the provision extending the prohibitions of Section 3(1) of the Act to include prohibitions against undue preference of and undue prejudice to "regions, districts and territories";
>
> (2) the provision authorizing and directing the Commission to institute an investigation of certain rates within and between territories and to enter appropriate orders for the removal of any unlawfulness found to exist (Section 5(b)); and
>
> (3) the statement of national transportation policy contained in the preamble.

Of these three provisions only the first actually amends the Interstate Commerce Act and this provision merely adds "regions", "districts", and "territories" to the objects protected against undue preference and prejudice under the Act. It did not alter the tests of unreasonableness of rates under Section 1 of the Act. The amendment had nothing to do with Section 1. While the amendment made clear that rates are unlawful if they unduly prefer and prejudice regions, districts or territories, such rates are unlawful under Section 3 of the Act, and not under Section 1. They are unlawfully prejudicial only; they do not, by any force of the amendment, become unreasonably high or low in violation of Section 1. Just as the finding of prejudice to all-rail shippers in the *Youngstown* case was not material to the finding of a Section 1 violation, so a finding that rates discriminate against a region, district or territory would not be material on the issue of their reasonableness under Section 1. Whether Official Territory class rates are unreasonably low must be determined without regard to the 1940 amendment of Section 3.

Nor does Section 5(b) of the Transportation Act of 1940 either change the tests of reasonableness or extend the Commission's powers with respect to the removal of unlawfulness when found to exist. Section 5(b) merely authorizes and directs that specific investigations be made by the Commission and this is not confined, as here, to class rates but extends to all rates in the fields described. Section 5(b) authorizes and directs the Commission

> "to institute an investigation into the rates on manufactured products, agricultural commodities, and raw materials, between points in one classification territory and points in another such territory, and into like rates within any of such territories, maintained by common carriers by rail or water subject to part I of the Interstate Commerce Act, as amended, for the purpose of determining whether said rates are unjust and unreasonable or unlawful in any other respect in and of themselves or in their relation to each other, and to enter such orders as may be appropriate for the removal of any unlawfulness which may be found to exist: Provided . . ."

This section clearly makes no attempt to change the tests of rate reasonableness. The direction is merely to determine "whether said rates are unjust and unreasonable or unlawful". The standard of determination is obviously the existing standard of the Act. No other standard is even hinted at. Nor does the section increase the Commission's power with respect to remedies for unlawfulness. Nothing, for example, contains any suggestion that a minimum rate may be fixed when theretofore it might not be. The direction is to enter, in the event of a determination of unlawfulness, an "appropriate" order. In this respect the section is analogous the Hoch-Smith Resolution of 1935 which provided that, upon a determination of unlawfulness, the Commission should order any "lawful change". The Commission interpreted this mandate as a broadening of its powers. This Court said in *Ann Arbor R.R. Co. v. United States,* 281 U.S. 658 (1930) with respect thereto, however,

> "The third paragraph was construed by the commission as making a change 'in the basic law' . . . Indeed it is apparent from the commission's opinions that it regarded this paragraph as requiring it to condemn the existing rates as unreasonable and unlawful, although, had they been considered independently of the paragraph, they must have been upheld as reasonable and lawful under the applicable sections, 1(5) and 3(1), of the existing law.
>
> "We are of opinion that the commission's construction can not be supported. The paragraph does not purport to make any change in the existing law, but on the contrary requires that that law be given effect. Nor does it purport to make unlawful any rate which under the existing law is a lawful rate, but on the contrary leaves the validity of the rate to be tested by that law." (pp. 667-8)

And, as the United States District Court said, in *Anchor Coal Co. v. United States* 25 F. (2d) 462 (1928), in commenting upon the reliance placed upon the Hoch-Smith resolution by the Commission in the proceedings there under review,

> ". . . the fact that the Commission seemed to consider that the Hoch-Smith resolution required it to consider or give effect to industrial conditions and the shift of traffic, or at least showed a spirit and purpose in that regard which should be deferred to, is of itself sufficient to invalidate the order complained of." (P. 474)

It is clear that the direction to make an appropriate order is a direction to make an order appropriate under the governing law—the Interstate Commerce Act. Power to issue a minimum rate order under circumstances which would not otherwise have permitted such an order cannot reasonably be inferred from this language. Such drastic interference with the managerial discretion of the carriers cannot so easily be inferred.

The remaining provision of the Transportation Act of 1940 upon which the Commission in these proceedings seeks support for its unprecedented action, namely, the declaration of policy contained in the Act, is obviously a makeweight and not only lends no strength to the Commission's decision but actually emphasizes the intended continued application of existing and established standards. The declaration sets forth that it is the national transportation policy, among other things,

> "to encourage the establishment and maintenance of reasonable charges for transportation services without unjust discriminations, undue preferences or advantages or unfair or destructive competitive practices."

2. *The Commission has not found and, on the evidence, could not find, either that Official Territory class rates are noncompensatory or otherwise threaten to have harmful affects upon the revenues of the carriers which maintain such rates or of other and competing carriers; in fact, the Commission's own subsidiary findings preclude such a finding.*

a. *The Commission has not found that Official Territory class rates are noncompensatory or threaten to create a noncompensatory situation.*

In its original report the Commission carefully refrained even from finding that class rates within Official Territory (which by its ad interim order were ordered increased 10% and which the report implies should ultimately be increased approximately 15%) were unreasonably low. The Commission made only the ultimate finding,

> "1. That the intraterritorial class rates . . . applicable within official, Illinois, southern, southwestern, and western trunk-line territories, are, and for the future will be, unjust and unreasonable, in violation of section 1(4) and (5)(a) of the act." (Rep. 700-701, R. 315-316).

This omission did not escape the attention of the late Commissioner Porter, whose vigorous dissenting opinion has previously been referred to. As Commissioner Porter pointed out, after stating that, in his opinion, the record fell "far short of supporting the finding that to be just and reasonable and free from undue prejudice and preference, the class rates throughout the area east of the Rocky Mountains must be placed in a strait-jacket of a uniform distance scale",

> "Even the report does not warrant such a conclusion, and it seems the majority could not quite bring themselves to make the direct finding that the class rates are and will be unlawful where and to the extent that they depart from such a scale." (Rep. 712, R. 327).

When this absolute lack of any particular finding to support its ultimate finding was called to the Commission's attention, the Commission, without further evidence, prepared and filed its supplemental report (R. 432), in which it amended its prior report to include the following finding:

> "We are of the opinion that our findings as to those rates are sufficiently stated in the prior report, but to remove any doubt, we find that the class rates within official and Illinois territories are less than just and reasonable rates, with the exceptions as stated in the prior report and in this report, and therefore unlawful. . . ." (Supp. Rep. 62, R. 467)

This supplemental finding is not sufficient. It is itself merely a conclusion of law. No finding short of a finding that Official Territory class rates are noncompensatory or threaten to create a noncompensatory situation will meet the requirement as to necessary preliminary findings of *United States* v. *Chicago, Milwaukee & St. Paul R. R. Co.* (supra).

No such finding has been made.

b. *The record will not warrant, and the Commission's own subsidiary findings preclude, a finding that Official Territory class rates are noncompensatory or threaten to create a noncompensatory situation.*

(1) *The evidence does not warrant, and the Commission's subsidiary findings preclude, a finding that Official Territory class rates, generally, are noncompensatory or threaten a noncompensatory situation.*

At no time during the entire course of the proceedings was any claim asserted or any evidence offered which would tend to show that Official Territory class rates generally were noncompensatory or threatened to create a noncompensatory situation. No respondent, no shipper and no competing carrier so asserted. If, in fact, Official

Territory class rates were too low, it is reasonable to suppose that protest would have been made to the Commission in these proceedings, either by the Official Territory railroads, objecting to an unduly low level of earnings, or by the shippers in Official Territory who use commodity and exception rates, objecting to the burden cast upon them by the fact of unduly depressed class rates, or by competing carriers, claiming inability to meet the railroads' rates. Unreasonably low class rates would necessarily result in (a) noncompensatory earnings for the carriers maintaining such rates and/or (b) unreasonably high rates on other traffic and/or (c) competitive disadvantage to other and competing carriers. Yet none of these groups complained of the general level of Official Territory class rates. The railroads in Official Territory defended the lawfulness of their existing rate structures at every stage of the proceedings, and as soon as the order of this Court was made, enjoining enforcement of the Commission's minimum rate order, the Official Territory carriers took prompt action to cancel the class rate increases which the Commission's orders had required them to publish. (See R. 809) Neither was any protest made by any shipper or shipper's representative in Official Territory. No shipper or shipper's representative who testified concerning Official Territory rates asserted that they were too low, and an examination of the record will clearly so show. Competing carriers' complaints were limited to certain less-than-carload rates (hereinafter considered) and did not relate either to carload class rates (which are both numerically and from a traffic standpoint, far the more important) or to class rates generally.

Official Territory class rates were not even attacked as too low by those parties who complained of the nonuniformity of class rates throughout the nation. In fact, many of these southern and western proponents of uniformity recommended the adoption of the Official Territory level of class rates in their own territories. Others stated merely that the problem of how uniformity should be achieved should be left to the Commission; they did not suggest that the record warranted an increase in Official Territory rates.

Official Territory class rates not only were not claimed by anyone in the proceeding to be unreasonably low but such rates could not possibly have been shown to be less than reasonable rates or noncompensatory. Subsidiary findings based upon evidence credited by the Commission confirm this unequivocally. The revenues of the Official Territory carriers are, and consistently have been, adequate for a number of years, during which the present Official Territory class rate adjustment has been in effect. The following chart, from Page 613 of the Commission's Report, (R. 228) reflecting earnings in terms of percentage return on investment of the carriers in Southern Territory and Eastern District (which, as defined at page 605 of the Report (R. 220), is virtually synonymous with Official Territory) shows not only that Official Territory earnings have been completely adequate in recent years (averaging 4.28% for the three-year period 1941-3) but also that even in the depressed period of earnings in the 1930's, the Official Territory carriers consistently had either greater or approximately the same earnings as the Southern carriers, *whose class rates the Commission found excessive:*

	Southern region Percent	*Eastern district Percent*
Year 1936	2.52	2.67
Year 1937	2.35	2.27
Year 1938	1.90	1.26
Year 1939	2.50	2.34
Year 1940	2.57	2.66
Average of 1936-1940	2.37	2.24
Average of 1941-1943	5.49	4.28

So also, the fact is, and the Commission has so found (Supp. Rep. 65, R. 471) that class rates are the highest rates which the railroads publish and therefore produce greater mile-for-mile revenues than any other rates which the railroads publish. The 17.6% of the traffic which (according to the traffic study made and submitted in evidence in the proceedings before the Commission as Exhibit 228)* moves on exception rates within Official Territory, and a substantial portion of the 76.7% of the traffic which (according to said study) moves on commodity rates therein, necessarily moves on rates which are lower than class rates in relation to the cost of the transportation service furnished, for these exception and commodity rates are all** rates which the railroads have published in lieu of the higher class rates which would otherwise be applicable.

The conclusion is inevitable that class rates generally cannot be found to be unreasonably low or noncompensatory in Official Territory, when, as the Commission has found, the Official Territory rate structure, as a whole, afforded the Official Territory carriers a profit upon their investment (more than 4.25% in 1943, the latest year for which complete data were available at the time of the Commission's decision (Rep. 612, R. 227), and when, as the Commission has found, 94.3% of all Official Territory traffic moves on rates which are not class rates (Rep. 564, R. 179).

Subsidiary findings of the Commission also preclude a finding that Official Territory class rates threaten a noncompensatory situation. Thus the Commission has found that virtually all of the class rates which it "found" unlawful were established as the result of its general rate investigations between 1925 and 1930, subject to certain relatively minor modifications in 1934, 1935, and 1938 and a general increase in 1938. (Rep. 516, R. 131) The Official Territory rates were, as the Commission finds, founded upon distance scales and key rates prescribed by the Commission in 1930, and except for the general increase of 1938 and certain lake-rail modifications made in 1935, had remained virtually unchanged since that time. (Rep. 517, R. 132) These findings would preclude the Commission from finding that the continuance of Official Territory class rates at their existing levels would threaten ruinous rate wars, or disturb seriously the established rate structure, or force other and competing carriers to suffer ruinous rate reductions. These findings show that the Official Territory class rates were integral and important parts of an established rate structure of approximately 15 years standing and obviously therefore could not threaten to disturb that structure.

---

*R. 11,834. Summarized at p. 564 of the Report. (R. 179)

**Except only rates published for the relatively few commodities which are not included in the Consolidated Classification.

(2) *The evidence does not warrant, and the Commission's own subsidiary findings preclude, a finding that any particular Official Territory class rates are noncompensatory or threaten a noncompensatory situation.*

The only claim that any Official Territory class rate was unreasonably low was the claim advanced by certain motor carrier interests that less-than-carload class rates are unduly low in *all* territories and should be increased. No claim was made that any Official Territory carload class rate was noncompensatory. The motor carriers' claim was based upon the Edwards Cost Studies, so called, which are referred to in the Commission's Report and which were claimed to indicate that, upon certain assumptions, less-than-carload rates applicable to *third class and lower* are inadequate to cover out-of-pocket expenses, including the costs incurred in performing pickup and delivery services, plus constant expenses which are allegedly attributable solely to the handling of less-than-carload traffic.

The Commission's subsidiary findings in its supplemental report provide the best refutation of any claim that the evidence, consisting only of these Edwards Cost Studies, shows that less-than-carload class rates are noncompensatory, either in Official Territory or any other territory. In the first place, as the Commission has found, the *Edwards*

Cost Studies, upon which the claim of unreasonableness is based, *do not reflect presently existing conditions.* As the Commission states, in answering the objection of the motor carriers to the *reduction* of Southern and Western less-than-carload rates,

> "The petitioners contend that our finding that the less-than-carload class rates should be reduced, except in official territory, is in conflict with our finding on page 697 of the original report, based upon the cost data, that less-than-carload traffic generally is not bearing its proper share of the costs of transportation. *That finding was based on operations of the railroad in 1939* when the average load per car of less-than-carload shipments amounted to only 4.3 tons in the West, 5.5 tons in the South, and 6.4 tons in the East including Pocahontas and New England territories. *Since then there has been a substantial increase in the average loading of such shipments which has materially decreased the unit costs* attributable to less-than-carload traffic. The increased loading was brought about under war-time conditions, but it does not follow that in the post-war period, especially in the immediate future, loadings will decline to the levels of 1939." (Supp. Rep. 65, R. 471) (Emphasis supplied)

Secondly, as the Commission has found, the cost studies are not reflective of the cost of handling merely *class rate* less-than-carload traffic, but rather, they reflect the cost of handling *all* less-than-carload traffic, including all of the less-than-carload traffic which moves on exception and commodity rates. Thus, the Commission states,

> "The cost data on less-than-carload traffic relate to such *traffic as a whole* and not solely to that which moves on class rates. In appraising the figures it must be borne in mind that much of this traffic does not move on class rates, but on exception rates and commodity rates. Obviously, the class-rate traffic bears the highest rates. Consequently, even if under present conditions less-than-carload traffic, as a whole, in the West and South is not paying its proper share of the costs, it is possible that such result is due in a large measure to the maintenance of exception and commodity rates." (Supp. Rep. 65, R. 471-2)

From the foregoing supplemental findings of the Commission it is apparent that the record will not permit a finding that any less-than-carload rates in Official Territory are unreasonably low or noncompensatory. The Commission has itself pointed out the two principal reasons why the Edwards Cost Studies cannot be used as a basis for testing the compensatory character of any less-than-carload class rates. There was no other evidence or finding bearing on the issue.

Just as the subsidiary findings referred to preclude a finding that any particular Official Territory class rate or group of class rates was noncompensatory, so also other findings which the Commission has made would preclude its finding that any such rate or group of rates threaten to create a noncompensatory situation. The Commission has found specifically that there is no evidence which would enable it to determine whether any particular classification rating is, or was, unreasonable. (Rep. 502, R. 117) The Commission has also found that, "A (classification) rating must be complemented by a class rate, and vice versa, in order to give substance to either." (Rep. 473, R. 88) These two findings constitute an admission by the Commission of what was the fact, namely, that there was no evidence which would enable the Commission to find any particular class rate unreasonable, whether unreasonably low or unreasonably high.

3. *Even if the evidence had warranted (as it does not) and the Commission's findings had not precluded (as they do) a finding that Official Territory less-than-carload rates or any other particular class rates are unreasonably low such a finding would not warrant an order increasing all Official Territory class rates.*

As has hereinbefore been pointed out, the record contains no evidence which has any tendency to show that Official Territory carload class rates, or class rates generally, or Official Territory first and second class less-than-carload class rates, are lower than reasonable minimum rates, and the subsidiary findings of the Commission bar any such finding.

The only rates which were placed in issue with respect to reasonableness were third and lower class less-than-carload rates, and here again not only the lack of evidence, but also the subsidiary findings of the Commission, bar any finding that such rates are less than reasonable rates.

But even if the Commission had found, based on substantial evidence (and it has not) that third class and lower less-than-carload class rates in Official Territory are unreasonably low, such a finding obviously would not warrant a finding that *all* class rates in Official Territory are unreasonably low. Without such findings, supported by substantial evidence, no basis is provided for the entry of the present minimum rate order to correct unreasonableness. No one has contended that first and second class less-than-carload class traffic and all carload class traffic in Official Territory is not paying the full cost of its transportation and more, and if certain other less-than-carload rates were in fact shown to be burdening other traffic, such rates would be burdening *all* other traffic, including *all* other class rate traffic.. If this were the case, the only course properly open to the Commission, in the event of a finding that certain less-than-carload rates are unduly depressed, would have been to order increases in the specific "unlawful" less-than-carload rates. The burden, if any, to which all other class rate traffic is subjected cannot be alleviated by *increasing* the rates upon that traffic, and such rates, not themselves unreasonably low, could not lawfully be increased.

D. *The Commission's Ad Interim Order cannot be Sustained as a Valid and Appropriate Correction of a Violation of Section 3 of the Act.*

There are two complete and insurmountable obstacles to any attempt to sustain the Commission's order in this proceeding as a valid order to correct a violation of Section

3. First, the record does not warrant, and the preliminary findings of the Commission are inconsistent with and therefore preclude the Commission's ultimate finding of a Section 3 violation. Second, even had the record warranted a finding of an unlawful relationship of rates in violation of Section 3 of the Act, the Commission's authority would be limited to the entry of an alternative order, there being various possible and lawful methods of correcting the relationship.

1. *The record does not warrant, and the preliminary findings of the Commission are inconsistent with, and therefore vitiate, the Commission's ultimate finding of a Section 3 violation.*

a. *Rate disparity does not result in undue preference and prejudice within the meaning of Section 3 of the Act unless such disparity (1) results in disparity in actual shipping charges, (2) causes injury, and (3) is unjustified by transportation conditions. The 1940 amendment of Section 3 of the Act did not alter this well-established concept.*

Section 3(1) of the Act provides as follows:

> "It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however,* That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

For the relationship of any two or more rates to result in undue preference and prejudice within the meaning of Section 3 it is clear that the relationship between the allegedly preferential rates and the allegedly prejudicial rates must result in disparity in actual charges (that is, it must appear that the rates or groups of rates complained of actually apply and that neither has been superseded in fact by other rates); that the disparity is actually injurious to the prejudiced shipper or territory, and that the disparity is unjustified.

The first of these elements, namely, the requirement that the rates which allegedly result in preference and prejudice must be found to produce disparity in charges is of critical importance in this proceeding, notwithstanding the fact that it appears to be self-evident and elementary. A class rate of $100 between two points in Official Territory as compared with a class rate of $110 between a point in Southern Territory and a point in Official Territory cannot be preferential of Official Territory or shippers therein and prejudicial to Southern territory or shippers if in fact there is a commodity or exception rate of, for example, $90, which supersedes the class rate and which is the actual rate charged for the interterritorial movement from the South to Official Territory. There would obviously be no justification for equalizing the two class rates at $105, if the Southern shipper had available already a $90 rate. The so-called equalization would merely be penalization of the Official Territory shipper.

Because this proceeding is concerned with class rates only and because the Commission has concluded that certain class rate differences result in preference and prejudice, it is necessary that this Court determine whether the record warrants a finding (which is essential but which the Commission has not made) that class rate differences actually produce differences in charges. If the class rate for a particular commodity has been superseded, and in effect cancelled, by the railroads' establishment of a commodity rate or an exception rate—so that no shipper would or could be charged the class rate—the class rate does not result in a charge, and could not prefer or prejudice.

That a finding of undue preference and prejudice also requires a finding of injury resulting from rate disparity is well established. Thus, this Court, in *Interstate Commerce Commission v. Chicago Great Western Railway*, 209 U. S. 108 (1908), in invalidating an order of the Commission which condemned a rate relationship under Section 3 of the Act, rested its decision principally upon the lack of convincing evidence of injury, saying:

> "While it may be that the proceedings are not to be narrowly limited to an inquiry whether this particular complainant has been in any way injured by the action of the railroad companies, yet that question must be regarded as the one which was the special object of inquiry and consideration." (P. 118)

The Court then cited the lower court's finding that complainant had not been injured, and stated, at P. 121:

> "If . . . the lower rate given to the packers does not directly influence or injure the shippers of livestock, it is difficult to see what foundation there can be for the claim of an undue and unreasonable preference."

The Commission itself has consistently recognized the necessity for a finding of injury in a Section 3 proceeding.

Duluth Chamber of Commerce v. Chicago, St. P., M. & O. Ry. Co., 122 I. C. C. 739, 742 (1927)

Utah State Automobile Association v. Atchison, T. & S. F. Ry. Co., 92 I. C. C. 376, 386 (1924)

City of Moorhead v. Great Northern Railway Co., 172 I. C. C. 38, 42-3 (1931)

U. S. Phosphoric Products Corp. v. Butte, A. & P. Ry. Co., 153 I. C. C. 459, 465 (1929)

Federated Metals Corp. v. Pennsylvania Railroad Co., 161 I. C. C. 287, 288 (1931)

The third essential element of undue preference and prejudice, namely, that such disparity in charges, if any, as the rates produce is not justified by transportation conditions is well recognized. As this Court stated in *United States v. Illinois Central Railroad Company*, 263 U. S. 515, 524 (1924),

> "To bring a difference in rates within the prohibition of Section 3, it must be shown that the discrimination practiced is unjust when measured by the transportation standard. In other words, the difference in rates cannot be held illegal, *unless it is shown that it is not justified by the cost of the respective services, by their values, or by other transportation conditions.*" (Emphasis supplied.)

The 1940 amendment of Section 3(1) in no way alters the tests of unlawfulness thereunder. As has hereinbefore been pointed out, that amendment merely added "regions, districts and territories" to the list of entities which are protected against discrimination under the Act. The amendment does not affect or purport to affect the tests of preference and prejudice or the test of what is "undue". The chain of circumstances which so indicates began with the decision of the Commission in the *Texas & Pacific* case (supra) in which the Commission found that the port of New Orleans was unduly preferred by a certain rate relationship and that the port of Galveston was unduly prejudiced thereby. This Court subsequently held in that case that a port was not a locality and that, as Section 3 (in its then wording) forbade only undue preference of and undue prejudice to "any particular person, company, firm, corporation or locality, or any particular description of traffic", a port could not be unduly preferred or prejudiced. Shortly thereafter Congress amended Section 3 so as to include "ports" and "gateways" as points which might not lawfully be preferred and prejudiced. This still left open the question of whether a region, district or territory could be said to be a locality (rather than merely a group of localities) and hence protected against undue prejudice. Accordingly, in the Transportation Act of 1940, Congress again amended Section 3 so as to make clear that regions, districts and territories come within the protective purview of the Act. But the test of when preference and prejudice are undue was in no way affected. The issue was not presented any more than it had been presented by the earlier proposal that "ports" be allowed to complain when unduly prejudiced. See: *Albany Port District Commission* v. *Ahnapee & W. Ry. Co.*, 219 I.C.C. 151, 171 (1936); *City of Philadelphia* v. *Baltimore & O. R. Co.*, 231 I.C.C. 21 (1938). It is obvious that, in a Section 3 proceeding involving any other than a "region, district or territory", it must be shown that the relationship arises from rates actually in force which cause injury and which are unjustified by transportation conditions. *It is absurd to contend that Congress, when it added the words "region, district and territory" to the list of entities which might not lawfully be preferred or prejudiced, contemplated an exception with respect to these entities alone in the application of the tests of unlawfulness or gave the Commission more extensive powers, in this instance alone, with respect to the removal of preference and prejudice.* As the late Commissioner Porter pointed out,

> "Certainly there has been no change in the criteria, to one of which I have just referred, which have long been applied by us in determining whether undue prejudice or preference exists." (Rep. 722, R. 337)

Nor can it be successfully contended that, when discrimination between territories is drawn in issue, the requirements of the Act with respect to quantum of proof of unlawfulness are less exacting. If anything, the required quantum of proof should approach maximum in a proceeding wherein the Commission's order will affect rates throughout at least one-quarter of the nation (and no territory comprises substantially less).

b. *The Commission's ultimate finding of a Section 3 violation is not only based upon a misconception of law, but is unwarranted by the record and inconsistent with the Commission's own subsidiary findings.*

(1) *The Commission misconstrued the Transportation Act of 1940.*

It has hereinbefore been pointed out that the Transportation Act of 1940 created no changes in the standards of lawfulness under the Interstate Commerce Act and no enlargement of the powers of the Commission with respect to the removal of unlawfulness when properly found to exist (See pages 34 to 37 and 50 to 51 hereof).

The Commission erroneously concluded otherwise. The Commission's minimum rate order requiring a 10% increase in Official Territory intraterritorial class rates manifests not an attempt by the Commission to remedy unlawfulness under the established and well recognized standards of the Interstate Commerce Act but rather one step in the attempt to impose uniformity of class rates upon the nation, in response to what the Commission supposes, erroneously, to be a new mandate of Congress. The key to an understanding of the Commission's findings and order lies in the Commission's interpretation of the provisions of the Transportation Act of 1940 which the Commission deems "recent amendments of the Act". With respect to these provisions, the Commission states, at Page 692 of its Report (R. 307),

> ". . . *it is clear that the main purpose which Congress had in mind was to bring about a greater degree of equalization, harmony, and uniformity in the different regional or territorial rate structures of the country.* The method employed to accomplish this purpose is equally plain. By the amendment to the substantive antidiscrimination provisions of section 3 (a) all discriminations in the form of undue or unreasonable preference or advantage, or undue or unreasonable prejudice or disadvantage, as between regions, districts, or territories, viewed as separate entities, were

> brought directly within the purview of the act along with all the other inhibitions previously included. We were then authorized and directed by the other provisions mentioned to remove any such discriminations found to exist in a proper proceeding. This means that such discriminations as those mentioned which result from differences in the methods of distributing the general rate burden in the several rate-making territories, or from any other cause, if not justified upon proper consideration of recognized elements of rate making *applied in the light of the amended law* are unlawful and should be corrected." (Emphasis supplied)

It is highly significant that the Commission believes that the amended law effects changes either in the recognized elements of rate-making or in the manner in which they are to be taken into account as justification for rate differences. This statement evidences clearly the Commission's belief that Congress has empowered the Commission to achieve rate uniformity or nearer uniformity throughout the nation and to establish uniformity or nearer uniformity as a new standard of lawfulness. Acting on this completely erroneous assumption, the Commission has proceeded to find that, because class rates are not uniform throughout the United States, they are therefore not lawful.

Clearly the order complained of in this proceeding is based upon an erroneous theory of law.

With respect to such an order the Court said in the *Anchor Coal* case (supra):

> "If, however, in making the order complained of, the Commission has exceeded its powers, or has proceeded upon an erroneous theory of law . . . the courts are not bound by its action." (P. 471)

(2) ***The record will not warrant, and th Commission's own subsidiary findings are inconsistent with its ultimate finding of undue preference and prejudice.***

The Commission has found that class rates applicable to transportation wholly within Official Territory are generally somewhat lower than class rates applicable to transportation into Official Territory from other territories, and that because of these differences, the Official Territory intraterritorial rates are unduly preferential to Official Territory generally and to shippers and receivers of freight therein and the interterritorial rates are unduly prejudicial to the other territories generally and to shippers and receivers of freight therein in violation of Section 3 of the Act. (Rep. 701, R. 316) In effect the Commission has found the rates in issue unlawful because not uniform.

As has hereinbefore been pointed out, however, uniformity is not, in and of itself, a standard of lawfulness. A finding of undue preference and prejudice requires more than a showing of differences in rates. It must appear that the rate differences result in *actual differences in charges*, that these differences cause injury and that the differences are not justified by transportation conditions. (See pages 47 to 51 hereof).

(a) *The record does not warrant, and the Commission's findings preclude, a finding that articles move, or even that articles generally move, both within Official Territory and into Official Territory on non-uniform class rates and that class rate differences therefore result in actual differences in shipping charges.*

Class rates for movement wholly within Official Territory are admittedly generally lower than class rates for movement into Official Territory, but it does not follow that a shipper must generally pay more (mile for mile) to ship goods into Official Territory than he would pay if he were shipping the same goods from one point in Official Territory to another. It would only so follow if the differing class rates were the only rates which actually applied to the respective movements. If the charge for transporting a particular shipment *into* Official Territory is determined by a commodity rate, or an exception rate, rather than by a class rate, whereas the charge for the comparable intraterritorial shipment of the same commodity in Official Territory is determined by a class rate, the *difference in the class rates* cannot produce a difference in the charges actually paid for the two shipments. Similarly, if the applicable rate for the Official Territory shipment be a commodity rate, and the comparable rate for the shipment into Official Territory be a class rate, the *difference in class rates* cannot produce a difference in actual charges. Only if a particular commodity moves both into Official Territory and within Official Territory on class rates will the difference in class rates produce a difference in shipping charges.

These basic and elementary considerations underlie the inability of the record in this proceeding to support either a preliminary finding of the Commission that class rate differences produce differences in charges, or an ultimate finding that such class rate differences result in unlawful preference and prejudice.

The record affords no basis whatsoever for a finding, and subsidiary findings are inconsistent with a finding, even generally, that those articles which move on class rates *within* Official Territory also move *into* Official Territory on class rates or that articles which move on class rates into Official Territory move on class rates in Official Territory. The record and subsidiary findings show that, generally, the same traffic does not move both *within* and *into* Official Territory on the same kind of rates. Less than 6% of the total traffic within Official Territory moves on intraterritorial class rates and *almost no traffic moves on interterritorial class rates into Official Territory.* (Rep. 564, R. 179) Less than 1% of the traffic moving into Official Territory from Southern Territory moves on class rates and only 3.1% of that moving from Western Territory (Rep. 564, R. 179). There is no basis for inference that the same or similar types of articles are involved in these unusually limited volumes or that, if they are, the class rates involved are more favorable to Official Territory shippers. In fact, the likelihood is to the contrary. The probabilities are that the traffic which moves into Official Territory on class rates is moving on those class rates which are the same as, *or lower than,* Official Territory class rates. That there are many such rates is evident from the Commission's findings in Appendices 2 and 3 to its Report. (Rep. 731-733, R. 346-348). But, whatever the probabilities may be, the fact remains that *the record affords no basis for any finding either that articles move, or that articles generally move, both within and into Official Territory on class rates which are not uniform and are more favorable to the Official Territory shipper.* Such a finding could not be premised upon any evidence other than a traffic test reflecting the facts with respect to traffic movement within and into Official Territory, and admittedly no such test was offered in evidence. In the absence of such a traffic test, it cannot be assumed that those articles which move on class rates within Official Territory also move into Official Territory on class rates which are less favorable.

This infirmity in the record and these subsidiary findings are clearly fatal, for the *sine qua non* of a finding that the relationship *between two class rates* results in undue preference and prejudice in violation of Section 3 of the Act is evidence that the allegedly preferred shipper avails himself of *one of said class rates* and pays charges which are lower in relation to the service with which he is provided than does the allegedly prejudiced shipper who *must* avail himself of *the other class rate.* If either shipper does not use the class rate which allegedly prefers or prejudices him, but uses an exception or commodity rate, it becomes impossible, in the nature of things, to find that preference or prejudice results *from the relationship between the class rates.* The only preference or prejudice which could result would be from the relationship between the actual governing rates, whether class, commodity or exception, *and as to this there is no evidence.*

The Commission's error, in this regard, is not a mere technical error, but one of substance having far-reaching consequences. If the Commission's order is permitted to stand, despite this error, the effect will be that thousands of shippers in Official Territory will be required to pay increased freight rates in order to "correct" what is a wholly illusory "discrimination". Consider, for example, a jewelry manufacturer in New England shipping his manufactures throughout Official Territory on class rates, and on a representative shipment, paying, let us suppose, a rate of $100. Assume that a Southern jewelry manufacturer sells his product in Official Territory in competition with the New Englander and that if the Southern shipper were required to ship on class rates, his rate (for the same distance) would be $130. But the applicable rate for the Southern shipper is not the class rate, but either an exception rate or a commodity rate which is also $100. Yet the Commission would order the Official Territory rate increased to $110, and, in a wholly futile and useless gesture, order the Southern rate decreased to $117 ($130 less 10%). *Everything about such a situation is illusory except the $10 increase which the Northern shipper is required to pay.* The discrimination is wholly illusory; the reduction in the Southern class rate (already a "paper" rate) is meaningless. *The 10% increase in the Northern shipper's rate, however, is real, despite the fact that it is wholly unwarranted.*

The Commission is well aware that this situation is common. It has found that class rates, particularly within the South, are generally superseded by exception rates and commodity rates, and that the exception rates, particularly, tend to be of territory-wide application. This latter fact is important, for the Southern Classification and exceptions to it apply on interterritorial traffic from the South to the North. *The Commission has found that in 1940 the Southern carriers established exception rates for more than 3500 items in the Southern classification, thereby making "paper rates" of the 3500 formerly prevailing* *class rates.* (Rep. 477, R. 92). *Yet the Commission has "found" these 3500 paper rates prejudicial to the South and, to remove that wholly illusory prejudice has ordered increases in Official Territory rates on these 3500 commodities.* The Commission's order requires higher Northern rates (to remove "prejudice") on 3500 articles (which were "removed" from the Southern classification in 1940) and on the many thousands of other articles for which the Southern carriers have established territory-wide exceptions. Yet the interterritorial *class* rates on these articles cannot possibly cause prejudice or injury, direct or indirect, because the *present* shipper pays and the *potential* shipper would or will pay, not the interterritorial class rate, *but an interterritorial exception rate.*

A record, which will not warrant a finding and which contains subsidiary findings which are inconsistent with a finding, that differences in the rates in issue even generally produce differences in shipping charges paid or required to be paid cannot sustain an ultimate finding that the rates in issue are violative of Section 3 of the Act.

(b) *The record does not warrant, and the Commission's subsidiary findings preclude, a finding that differences between class rates within and class rates into Official Territory result in injury.*

The record is barren of evidence of injury to any person or territories resulting from differences between class rates applicable within and class rates applicable into Official Territory or even of injury generally, consequent upon such differences. The absence of such evidence is inevitable in view of two circumstances pointed out in the preceding section hereof, (1) that there is a complete absence of evidence that *class rate* differences have even generally caused higher relative charges on articles moving into Official Territory than on articles moving within that Territory, and (2) that the record and subsidiary findings of the Commission demonstrate that differences between such class rates cannot generally require the payment of higher rates for the movement into Official Territory, because the very small proportion of such traffic which is class-rate traffic, has not been shown to consist of traffic in the same articles as move on class rates within Official Territory.

Southern and Western proponents of rate uniformity attempted to show that injury had resulted from the lack of uniformity of class rates by attempting first to show that individual shippers have been injured by such lack of uniformity.

Recognizing that the evidence introduced by them to support this proposition had wholly failed to achieve its purpose, these proponents of uniformity next endeavored to show that industry generally in the territories other than Official Territory, and particularly Southern industry, had experienced an arrested growth and a retarded development which should be attributed to the lack of uniformity of class rates. This latter myth, as the record shows and as the Commission's subsidiary findings demonstrate (Rep. 621-2, R. 236-7), was completely exploded by overwhelming statistical evidence that dynamic growth, rather than arrested development, has been the principal characteristic of Southern industry in recent years.

The evidence which was introduced for the purpose of establishing injury to industrial shippers in Southern Territory is summarized in the subsidiary findings at pp. 615 to 619 of the Commission's report. (R. 230-234) This evidence was offered with respect to rates on particular commodities and, as appears from the Commission's subsidiary findings, cannot possibly be regarded as support of a finding of even the slightest injury. The products and shipping points in question, together with a summary of the testimony and/or the Commission's comments thereon are as follows:

(a) *Washboards from Raleigh, North Carolina*: The shipper of this commodity who uses class rates into

Official Territory, competes with two manufacturers in Official Territory. *Whether his competitors use class rates does not appear.* 25% of his shipments into Official Territory are to Detroit, adjacent to a competitor's plant. The Commission's comment is that: "The business of the manufacturer who gave his testimony . . . has increased substantially." (Rep. 616, R. 231)

(b) *Leather, hides, tanning extracts to and from Andrews, North Carolina*: On leather, both commodity and class rates apply, and the only shipments clearly identified as taking class rates (viz., less-than-carload shipments) were merely anticipated at the time of the hearings. Hides do not move *into* Official Territory from this shipper's plant. No showing was made as to rates applicable on tanning extracts. (Rep. 616, R. 231)

(c) *Wine from Atlanta, Georgia:* With respect to this testimony the Commission said: "The witness knew little about rates, and an exhibit prepared by his traffic man was erroneous. The applicable rates to most of the points shown on the exhibit are combination rates, one factor of which, are *exception* rates from Atlanta to border points." The witness' company has recently constructed a larger plant at Atlanta, indicating, according to the Commission "that the business has made substantial progress at that point." (Rep. 617, R. 232)

(d) *Macaroni products from Memphis, Tennessee:* This shipper does not ship into Official Territory but would use *an exception rate* if he were to do so. Moreover, his exception rate is approximately 10% lower than the rate which the Commission, in a special macaroni rate proceeding, has found reasonable and nonprejudicial. (Rep. 617, R. 232)

(e) *Furniture from Birmingham, Alabama:* The shipper *does not use class rates.* (Rep. 617, R. 232)

(g) *Cucumber pickles from Faison, North Carolina:* The shipper *does not use class rates,* but truck competitive rates, which are *lower* than Official Territory class rates. (Rep. 618, R. 233)

(h) *Peanut products from Columbus, Georgia:* The shipper *does not use class rates,* but commodity rates lower than class rates. (Rep. 618, R. 233)

(i) *Grading machinery from Taccoa, Georgia and Vicksburg, Mississippi:* The shipper *does not use class rates.* His first Eastern plant was in Official Territory. Later, he established two plants in the South because of its many advantages. (Rep. 618, R. 233)

(j) *Calendars:* These products move on class rates. The shipper claimed injury from the loss of a 1943 contract to supply calendars. He was, however, awarded the contract in 1944. (Rep. 618, R. 233)

(k) *Electric appliances:* As recently as 1938 the Commission reviewed these rates and found them lawful. Existing freight rates were not found to interfere with competitive relationship. (Rep. 618, R. 233)

(l) *Lead products:*
and

(m) *Iron and steel tanks:* The shippers of these products do not ship into Official Territory but sell their whole output in the South and have never requested competitive rates into Official Territory. (Rep. 618, R. 233)

(n) *Cloth and rags:* These commodities take both class and commodity (or exception) rates. *The rates complained of, however, were not class rates.* (Rep. 618, R. 233)

(o) *Steel automobile truck bodies from Nashville, Tennessee:* It was admitted that this shipper has been able to sell his product f. o. b. Nashville for Official Territory delivery. (Rep. 618, R. 233)

(p) *Shell boxes from Nashville:* The complaining "shipper" does not produce the boxes and has no contract to do so. Another, non-witness, manufacturer is actually shipping from Nashville. (Rep. 619, R. 234)

Such evidence, introduced by Southern proponents of uniformity to establish injury, relates to sixteen different commodities or groups of commodities. In summary it is noteworthy that, of these sixteen commodities:

- 7 move, or would, if they did, move, into Official Territory on commodity or exception rates, rather than class rates (wine, macaroni, furniture, glass bottles, cucumber pickles, peanut products, and grading machinery)
- 1 moves on class rates which are not complained of (cloth and rags)
- 1 moves on commodity rates into Official Territory except in less-than-carload lots (leather)
- 1 moves on class rates which the Commission has specifically recently found lawful (electric appliances)
- 2 do not move into Official Territory because of the sufficiency of local demand (lead products and iron and steel tanks).

The evidence of injury, therefore, depends upon the testimony concerning

1. The washboard manufacturer who is able to sell washboards within commuting distance of his principal competitor's factory and has increased his business substantially;
2. The calendar manufacturer who lost the 1943 contract but obtained a 1944 contract from the same customer;
3. The automobile truck body manufacturer who is able to sell f. o. b. his plant; and
4. The would-be shell box manufacturer in Nashville.

The evidence with respect to the injury to Western shipping interests is aptly summarized by the late Commissioner Porter, in his dissenting opinion. As is there pointed out,

> "The western interests offered only three shipper witnesses, a steel manufacturer at Pueblo, Colo., who

> uses class rates to a very limited extent and did not advocate rate parity with Official Territory, a manufacturer of coal-washing machinery at Pittsburg, Kans., and a manufacturer of lamps and stoves at Wichita, Kans. The last two now ship most of their products to official territory, and neither left any impression that he was hurt by the present adjustment." (Rep. 720-1, R. 335-6)

The testimony of shipper witnesses and the Commission's findings with regard thereto, it is submitted, whether considered individually or collectively, cannot be said to evidence the slightest injury resulting from differences between class rates within and into Official Territory.

Equally untenable is the second claimed basis for a finding of injury, advanced by Southern interests, namely, that differences between class rates within and class rates into Official Territory have resulted in the retarding of Southern industrial development. Both the contention that differences between such class rates has affected Southern industrial development and the contention that Southern industrial development has been retarded are wholly without support in the evidence and are negatived by the Commission's subsidiary findings.

Certainly differences between class rates on interterritorial traffic into Official Territory and class rates within Official Territory cannot be found to have served as a deterrent to Southern shippers or potential shippers. The Commission has found, on the basis of a traffic count made by Dr. Aitchison for May 27 and September 23, 1942, that the South on those days was moving two-thirds as many cars consigned to Official Territory as it was moving cars intraterritorially. (Rep. 565, R. 180) Moreover, as the Commission finds, the rates available to the traffic moving into Official Territory were, in many instances, either lower than Official Territory rates (Rep. 601, R. 216) or on substantially the same level. (Rep. 602-3, R. 217-8)

Nor is there any evidence that the growth and development of industry within the South has been retarded, either by differences in class rates or by any other circumstance. As the late Commissioner Porter stated, in this regard,

> ". . . it is urged by the southern interests, and especially in behalf of the Southern Governors' Conference, that the industrial development of the South as a whole has been and will continue to be retarded, and therefore that the South as a territory has been and will continue to be injured, by the class-rate adjustment unless class-rate uniformity is brought about. The evidence is overwhelmingly to the contrary. The facts are that from 1929 to 1939, which is a representative period, the South made greater progress industrially and economically than any other section of the country . ." (Rep. 721, R. 336)

The statistical data set forth at pages 621 and 622 of the Commission's report (R. 236-237), evidencing the far greater industrial and economic progress made by the South, both generally and in respect of particular industries fully substantiates Commissioner Porter's position. After referring to these data in the majority report, Commissioner Porter continued,

> "Similar data of record show like trends in the furniture industry, in the manufacture of heating and cooking apparatus, and in other industries. Only in the manufacture of a relatively few products, such as morticians' goods, certain flavoring extracts and sirups, and flour and grain-mill products, was industrial trend during that period less favorable in the South than in the North. From 1930 to 1940 there was a greater decrease in agricultural employment in southern than in official territory, but manufacturing employment increased in the South and decreased in the North. In 1941, income payments for the United States were 111 percent of those in 1929, for official territory 100 percent, and for the South 128 percent." (Rep. 721, R. 336)

In view of the evidence and the subsidiary findings of the Commission with respect to injury, it is clear that the Commission's ultimate finding of undue preference and prejudice cannot be sustained.

(c) *The record does not warrant, and the Commission's subsidiary findings preclude, a finding that differences in transportation conditions do not justify differences between class rates within and class rates into Official Territory.*

While the Commission's ad interim order does not itself prescribe complete uniformity of class rates, it is important to remember that the Commission has based its ad interim order upon an ultimate finding that class rates within Official Territory, on the one hand, and class rates into Official Territory, on the other hand, are unduly preferential and prejudicial to the extent that *such rates are not uniform.* The Commission's ad interim order, as the Commission makes clear, does not purport to *eliminate* the preference and prejudice allegedly found but only to *reduce* that "unlawfulness" until such time as it can be wholly eliminated, as the Commission says, by the establishment of a uniform classification and the uniform rate scale which is set forth in Appendix 10 to the report. *The finding of unlawfulness is a finding that no departure from uniformity is justified.* (Rep. 701, R. 316) Such finding to be valid therefore must be based upon subsidiary findings to the effect that conditions affecting the two types of transportation service are not materially different.

Examined in the light of these considerations, it is obvious that the Commission's finding of violation cannot be sustained. The record does not contain evidence to warrant a finding that nonuniformity is unjustified, and the subsidiary findings of the Commission clearly will not permit such a finding. It is true, of course, that class rates into Official Territory (reflecting usually a blending of the origin territory rate level with the Official Territory level) are generally somewhat higher than class rates on traffic moving wholly within Official Territory. *But, the Commission itself has found that transportation costs are lower in Official Territory than in Southern Territory, and substantially lower in Official Territory than in Western Territory, from which it must be obvious that justification exists for a generally lower level of rates in Official Territory than from other territories into Official Territory.* The Commission has also found that Official Territory has, by far, the greatest preponderance of well-paying traffic, from which it follows that Official Territory rates on such traffic (generally class rates) may be lower than in any other territory, and lower than interterritorial class rates blending Official Territory and other rate levels.

Cost Differences

The fact that transportation costs are lower in Official Territory than in any of the other major rate territories affords the first important justification for the establishment and maintenance of nonuniform territorial rates, that is, of *lower rates generally* for Official Territory intraterritorial movement than for interterritorial movement into Official Territory.

That transportation costs are lower, and materially lower, in Official Territory than in any of the other major rate territories has repeatedly been recognized by the Commission in the past and is re-affirmed by findings based upon evidence, credited by the Commission, including the Edwards Cost Studies. *This evidence shows that Southern Territory costs are more than* 6%, *and that Western Territory costs are more than* 15%, *higher than Official Territory costs.* These differences are reflected in the table, appearing on Page 579 of the Commission's Report, (R. 194) wherein are set forth Dr. Edwards' territorial comparisons of costs for traffic moving 100, 300 and 500 miles in all classes of equipment, and reflecting actual average loads. The following table reflects the cost figures for 300-mile hauls in the three major rate territories:

Territory	*U. S. Costs —100*	*Official Territory Costs—100*
Official Territory	95	100
Southern Territory..........	101	106.2
Western Territory	110	115.8

To cover their higher costs the southern and western carriers are entitled to assess higher rates (including class rates) against freight moving within their territories than the Official Territory level of rates (including class rates); they are justified in assessing such higher charges against the freight which they originate for movement into Official Territory; and the Official Territory carriers are justified in joining in interterritorial class rates which reflect higher charges for the portion of the haul in Southern or Western Territory, as the case may be. Nonuniformity of class rates is plainly justified.

The Commission, in its attempt to construct a basis for the prescription of uniform class rates, has attempted to minimize the differences, between territories, in the cost of rendering transportation service. To achieve this result it has dealt, at considerable length, (Rep. 578-581, R. 193-196) with cost evidence which is irrelevant because based upon the arbitrary exclusion of the so-called Pocahontas lines from Official Territory. If the Pocahontas lines' revenues and expenses are excluded from Official Territory cost data, the resultant "Official Territory" costs can be shown to be approximately equal to Southern costs. Nothing could be more arbitrary and capricious, however, than a comparison based upon such exclusion. The Pocahontas lines are Official Territory carriers; they serve within Official Territory, maintain Official Territory rates, compete with other Official Territory carriers, and would be required, unless the Commissioner's minimum rate order with respect to Official Territory rates is enjoined in this proceeding, to increase their class rates by 10%. To exclude Pocahontas costs from Official Territory costs is to lay the basis for a cost comparison so arbitrary and unrealistic as to be meaningless. It is this comparison and this comparison only, which supports the Commission's view that territorial differences in costs ought to be disregarded.

Southern Territory costs are at least 6% in excess of Official Territory costs, whereas the general freight rate level in the South is only 4% higher than the level in Official Territory. The Commission's capricious juggling of cost data to obtain a different and unrealistic result is wholly unwarranted.

No amount of cost data juggling can obscure the substantial spread between Official Territory and Western Territory costs, which difference justifies substantial non-uniformity of rates (including class rates) and renders a requirement of class rate uniformity wholly unwarranted.

Traffic Consist Differences

In view of the cost differences which exist as between territories and which are discussed in the next preceding section, it is obvious that, even if no other transportation condition existed to warrant differences in territorial class rate levels, differences in territorial costs would justify the maintenance of class rates in Official Territory on a somewhat lower level than in either Southern or Western Territories, and would also, therefore, justify the maintenance of class rates on a somewhat lower level for movement wholly within Official Territory than for movement partly in another territory and only partly in Official Territory.

A further and fully as important justification exists for the maintenance of lower class rates in Official Territory than in other territories, and this justification is based upon differences, as between territories, in the nature of the traffic which is available to the carriers. These differences may be summarized by stating that the carriers in Official Territory have available to them a large actual, as well as relative, volume of highly remunerative freight, so called, which can afford to pay its own out-of-pocket costs of carriage and in addition contribute substantially to additional costs and profit, whereas the carriers in the other territories do not have this type of freight available in as large volume, actual or relative.

In all territories, considerable traffic moves upon rates which are very little more than compensatory, for the very understandable reason that such traffic would not or could not move at all by rail on higher rates. This traffic, while covering its direct costs, makes relatively little contribution to such items as overhead and return on investment, leaving these burdens primarily to other traffic which can and will move on more remunerative rates. Differences in the actual and relative volume of well-paying traffic available to the carriers have definite bearing upon the carriers' rates. It is elementary, for example, that carriers which can require 40% of their traffic to pay not only "its own way" but also the bulk of the indirect expense and profit of running the railroad, need not charge such high unit rates for the movement of that 40% as must carriers who must require only 20% of their traffic to bear the bulk of their overhead burden. While the figures used in the foregoing example are used for purposes of illustration only, the evidence credited by the Commission indicates clearly that the basic situation depicted in the illustration does in fact exist and that Official Territory carriers find it possible to secure their needed revenues by charging lower rates on their larger volumes of highly remunerative traffic, while the southern and western carriers are faced with the necessity of obtaining adequate revenues by charging high rates on a small, actual as well as relative, volume of highly remunerative traffic.

Manufactures and Miscellaneous traffic (which is the most important class rate traffic) and Products of Mines traffic are admittedly the most highly remunerative types of traffic and, as the Commission has found (Rep. 612, R. 227), both are even more remunerative to the Official Territory Carriers than to the carriers in Southern Territory, even though Official Territory rates are lower than Southern Territory rates. In the first place, these two commodity groups provide, throughout the United States as a whole, more than 80% of all revenues received by the carriers over and above their out-of-pocket costs even though they constitute only 72.2% of the total carload traffic (Rep. 612, R. 227). Moreover, these two types of traffic are more remunerative to the Official Territory carriers than to the Southern Territory carriers, notwithstanding the fact of higher Southern rates. Thus, as appears from the tables on Page 612 of the Commission's Report (R. 227), these two groups which, combined, account for 82.4% of Official Territory revenue net ton-miles and only 70.4% of Southern Territory revenue net ton-miles, produce 88.5% of Official Territory revenues in excess of actual cost and only 71.4% of Southern Territory revenues in excess of costs.

A further circumstance which increases the rate burden which must be borne by class rate traffic in the South, particularly, is the fact that Products of Mines traffic in the South is not capable of contributing so substantially to gross revenues as it contributes in Official Territory. Products of Mines traffic which, in Official Territory, is highly remunerative and accounts for 38.% of all revenues in excess of out-of-pocket costs, is considerably less remunerative in the South, where it accounts for only 21.2% of such revenues. One of the consequences of this fact is that more than one-half of all revenues in excess of Southern costs must be obtained by the Southern carriers from the one-quarter of their traffic in the manufactures and miscellaneous group.

Subsidiary findings also establish, beyond question, that the Official Territory carriers have available to them greater volumes, actually as well as relatively, of this more highly remunerative traffic than do the carriers of either of the other territories. This fact is apparent from the findings contained on Pages 611 and 612 of the Commission's Report. (R. 226-7) Thus, from the table appearing on Page 611 of the Report, the following comparisons with respect to Manufactures and Miscellaneous and Products of Mines traffic are shown:

	Percentage of total tonnage	*Percentage of total revenues*
Official Territory	88.42%	77.99%
Southern Territory	73.60%	58.31%
Western District	66.02%	53.92%

Other data of record, which the majority of the Commission has chosen to ignore, are reviewed by the late Commissioner Porter in his vigorous dissenting opinion. While the Commissioner was not in agreement with the majority in its conclusions and findings in the Report, his statements with respect to the evidence merit careful attention. As Commissioner Porter pointed out, in this regard, at Page 712 et seq. of the Report (R. 327 et seq.),

> "In the proceedings wherein these (territorial) levels were recently prescribed, we recognized that the volume of high-grade traffic was much greater and the articles included therein of much higher value in official territory than in the other territories; and that the volume of other than class-rate traffic, excluding coal, in comparison with the total traffic, was much greater, and the articles included in the other traffic of lower grade, in the other territories than in official territory. Because of these differing conditions, and the further fact that relatively lower rates were maintained on raw materials and basic commodities within the other territories than in official, we prescribed higher class-rate levels in southern, south-western, and western trunk-line territories than in official territory.

> "Since the decisions in which those prescriptions were made, the situation as to volume and kind of traffic transported in the various territories, has not changed, except in degree." (Rep. 712-3, R. 327-8)

After reviewing the evidence with respect to the much greater volume of manufactures and miscellaneous and products of mines traffic in Official Territory, the Commissioner continued,

> "Two classes of traffic, namely, coal and coke and iron and steel articles, move in much greater volume, constitute a far greater proportion of the total tonnage of freight handled, and provide absolutely and relatively a much larger amount of revenue in official territory than in the South. In 1939, approximately 95 percent of the coal and coke production of the country originated east of the Mississippi River, divided, official territory, including the Pocahontas region, 82.23 percent and southern territory, 12.9 percent. Excluding New England, in which there is no coal production but which imports a vast quantity, and the Pocahontas region, the coal and coke tonnage originated in official territory was 46.19 percent of the United States total. Coal and coke traffic is more diffused and is more evenly shared by the major eastern railroads than by those in the South, where it is largely confined to four railroads, Louisville & Nashville, Southern, Illinois Central, and Clinchfield." (Rep. 713, R. 328)

and further,

> "Official territory railroads handled 481 million tons of freight other than coal and coke in 1939, as compared with 143 million tons transported by southern railroads. Included in the former figure was a large volume of iron and steel traffic far in excess of the tonnage of like articles in southern territory." (Rep. 714, R. 329)

• • • • •

> "Thus, coal, coke, and iron and steel tonnage provide official territory railroads with large sources of revenue which are available only in small degree to southern railroads."

In concluding his discussion on this point, he stated,

> "From the foregoing it is plain that the consist of the traffic is vastly different in official territory than it is in either southern or western territory, and that the chief difference lies in the much larger proportion and volume of the high-grade and more remunerative traffic in official than in either of the other territories.
>
> * * * * *
>
> "These important facts mean that the eastern roads by reason of their large volume of the more profitable traffic can render adequate service to the public with a lower rate level on other traffic, such as class-rate traffic, than can the southern and western roads." (Rep. 716, R. 331)

The Commission's subsidiary findings that cost differences (while they exist) do not wholly justify lower Official Territory rates and that consist differences (while they exist) do not wholly justify such lower rates do not provide a basis for disputing what is the fact, namely, that cost and consist differences combined *do* justify important class rate differences, and *such subsidiary findings obviously preclude a finding that no rate differences are justified by transportation conditions.*

2. *The Commission's order, which fails to provide the carriers with alternative methods of removal of preferences and prejudice, would be invalid as a remedy for a Section 3 violation even if such violation had been shown to exist.*

Even if the Commission's ultimate finding of a Section 3 violation could be sustained (which it cannot), the Commission's ad interim order could not be sustained as a proper order to remedy such violation. An order to correct a preferential and prejudicial relationship must permit the carriers alternative methods of removing the discrimination unless, of course, there is only one lawful way in which the result can be achieved. The reason for this is that Section 3 of the Act is concerned with the relationship between rates, and with nothing else. If the relationship between two rates is unlawful, the Commission is empowered to order that relationship corrected. It is not empowered to prescribe the method by which the relationship shall be corrected, unless, of course, there is but one lawful method of correction. As this Court expressly said in *Texas and Pacific Railway Co.* v. *United States* (supra), in holding invalid the Commission's order

> " . . . Where an order is made under section 3 an alternative must be afforded. The offender or offenders may abate the discrimination by raising one rate, lowering the other, or altering both. (Citing cases) The situation must be such that the carrier or carriers if given an option have an actual alternative." (P. 650)

It is true that the Court referred in said case to the Commission's order as an order under Section 3, but the order obviously would not have been valid (although the contrary has been suggested) if the Commission on the same findings and for the same alleged illegality had stated that its order was entered under Section 15(1) of the Act. The Court was not concerned with the formal issue of whether the Commission in entering its order had referred to the wrong section as the source of its authority, but rather with the substantive issue of whether, when the illegality was in the relationship of rates, the Commission *could* order anything more than a change in the relationship, various means of effecting such change being possible and lawful. The plain meaning of the decision in the *Texas and Pacific* case is that when the Commission properly finds that illegality arises from a rate relationship, it may order that the relationship be corrected but may not require the establishment of a particular rate unless the correction of the relationship may lawfully be made only by the establishment of such rate and it is to this latter possibility that the Court's reference to Section 15(1) relates (289 U.S., fn. 39, p. 6[illegible]). If various lawful possibilities of correction exist, the carriers must be left free to determine the manner of correction in accordance with their managerial discretion. It is no answer to say that this rule does not apply in cases where the Commission also finds the lower rate unreasonable in violation of Section 1, for as is hereinbefore pointed out, the Commission has not made a valid finding to that effect in this case.

The District Court erred in its application of the law in this regard, holding that because the Commission's order was entered under Section 15(1) of the Act, and not Section 3, an alternative need not be afforded. (R. 1438) The Court apparently accepted the argument of counsel for the United States and the Commission that Section 15(1) must be interpreted literally, and that this Court's opinion in the *Texas & Pacific* case was to be disregarded.

Inasmuch as these contentions will undoubtedly be made again, before this Court, careful consideration of them is warranted.

The contention that Section 15(1)* should be interpreted literally proves too much and leads to obviously absurd conclusions. In Section 15(1) it is provided that if "the Commission shall be of opinion that any . . . rate, fare OR charge . . . OR classification, regulation OR practice . . . is or will be" (a) unjust or unreasonable, OR (b) unjustly discriminatory, OR (c) unduly preferential or prejudicial, OR (d) otherwise in violation of any of the provisions of the Act, the Commission may prescribe (a) the just and reasonable rate, fare or charge to be observed in such case, or the maximum or minimum or maximum and minimum, AND (b) the just, fair, and reasonable classification, regulation or practice to be followed, AND (c) order the carrier to cease and desist from violation, and not to collect rates, fares, and charges or maintain classifications, regulations or practices other than those prescribed. It will be noted that, while the types of unlawfulness are stated *disjunctively*, the available remedies are stated *conjunctively*. If section 15(1) is to be interpreted literally, as is contended for and if, accordingly, the Commission is to have the right to prescribe rates in a case where its only finding of unlawfulness is as to a rate relationship, then the Commission should by the same literal interpretation be deemed authorized, upon finding a tariff regulation unlawful, to prescribe not only a different regulation but a different rate. A literal interpretation of Section 15(1) would mean that if the Commission were to find, for example, that a particular carrier maintains an unjust and unreasonable tariff regulation affecting the manner of packing household furniture for transportation between New York and Chicago in violation of Section 1(6) of the Act, the Commission would be empowered not only to correct the specific violation by prescribing a just, fair and reasonable regulation, but might also, and in addition, prescribe a new rate for household goods between New York and Chicago (provided only that the rate be just and reasonable) and might order the carrier to cease and desist from publishing or collecting any other rate than that prescribed. Of course, such a result would be absurd, as those who contend for a literal interpretation of Section 15(1) would agree.

---

*The full text of the Section appears in the appendix hereto.

Section 15(1) must be interpreted in the light of the firmly established regulatory principle with respect to the managerial discretion of the carriers stated by this Court in

Interstate Commerce Commission v. *Chicago Great Western Railway*, 209 U. S. 108 as follows:

> " 'Subject to the two leading prohibitions that their charges shall not be unjust or unreasonable, and that they shall not unjustly discriminate so as to give undue preference or disadvantage to persons or traffic similarly circumstanced, the act to regulate commerce leaves common carriers, as they were at the common law, free to make special rates looking to the increase of their business, to classify their traffic, to adjust and apportion their rates so as to meet the necessities of commerce and of their own situation and relation to it, and *generally to manage their important interests upon the same principles which are regarded as sound and adopted in other trades and pursuits.*' " (pp. 118-9) (Emphasis supplied)

The history of the exercise of the Commission's regulatory authority has been characterized by the fundamental recognition on the part of the courts that, in the absence of unlawfulness, the carriers are free to adjust their charges in accordance with the discretion of their managers and that, accordingly, the Commission, upon a finding of unlawfulness, may only enter such orders as are *necessary* to correct the unlawfulness, unless Congress has *specifically* authorized it to do more. Thus when the Commission has sought to invoke powers which were neither necessary nor expressly granted, but which the Commission has believed would be convenient, and has accordingly found 'implied' in the terms of the Act, the exercise of such powers has been annulled by this Court. One of the earliest such instances occurred in *Interstate Commerce Commission* v. *Railway Co.*, 167 U. S. 479 (1897) wherein the Commission had sought to infer, from its power "to execute and enforce the Act", the power to prescribe rates, and wherein the Court said:

> "The vice of this argument is that it is building up indirectly and by implication a power which is not in

> terms granted . . . if it (Congress) had intended to grant the power to establish rates, it would have said so in unmistakable terms." (P. 509)

An examination of the nature of the wrong of undue preference and the terms of Section 15(1) in the light of the Act as a whole shows clearly that the power to order the removal of undue preference and prejudice *in a particular manner* is not a necessary power, and that it has not been specifically granted to the Commission. In the first place, the Commission, in order effectively to remove discrimination or undue preference and prejudice, ***need not do more than*** order the discrimination removed. The wrong arises only from the relationship of the two or more rates, and as this Court said in the *Texas and Pacific* case,

> "The offender or offenders may abate the discrimination by raising one rate, lowering the other, or altering both." (P. 650)

Secondly, it is clear that Congress has not specifically granted the Commission power to remove undue preference and prejudice by prescribing specific rates. As has hereinbefore been pointed out, the only interpretation of Section 15(1) which is consistent with such a grant leads to the absurd proposition that, once the Commission has found any type of unlawfulness, the Commission may immediately take over virtually all rate making and tariff functions of the carriers.

An examination of other provisions of the Act shows conclusively that Congress did not, and did not intend to, invest the Commission with power under Section 15(1) to prescribe a specific manner of removal of discrimination unless only one method of removal were possible and lawful. Section 13(4) of the Act contains the type of language which Congress would have used had it intended such a result.

In that section, the Commission is authorized, if it finds that intrastate rates discriminate against interstate commerce, to

> "prescribe the (intrastate) rate, fare or charge or the maximum or minimum, or maximum and minimum, thereafter to be charged . . . in such manner as, *in its judgment*, will remove such advantage, preference, prejudice or discrimination." (Emphasis supplied)

Section 13(4) thus contains a grant, in unmistakable terms, of the power to remove discrimination in a specific manner, and its language is to be contrasted with the wholly different language of Section 15(1). It is further significant that the provisions of Section 13(4) and the amendments to 15(1) relied upon by the Commission *were both contained in the same act, the Transportation Act of* 1920. *When Congress intended the Commission to assume the function of determining how prejudice should be removed, it knew how to make clear its intent.*

There is no incongruity in the Commission's having power to order specific changes in discriminatory intrastate rates (notwithstanding the State's sovereign rights) and yet being without power to order specific changes in interstate rates which result in undue preference and prejudice. Any claimed incongruity in this situation is illusory and unreal. In order to deal at all effectively with intrastate rates which discriminate, the Commission must have power to order specific increases or decreases in such rates, for it does not have comprehensive coercive power over intrastate rates and it is the existence of this comprehensive coercive power over the interstate carriers and interstate rates which permits the Commission to deal effectively with discriminatory interstate rates merely by ordering the carriers to remove the discrimination. State sovereignty is encroached upon far less by the Commission's being given the single specific power to increase discriminatory intrastate rates than it would be, were the Commission to be given the comprehensive control of intrastate rates which (without such specific power) it would need in order to deal effectively with intrastate-interstate discrimination.

The fact that the power to prescribe the manner of removal of undue preference and prejudice is not necessary to correct the relationship and has not been expressly conferred upon the Commission by Section 15(1) properly construed, indicates clearly that, in stating in the *Texas & Pacific* case that,

> "Assuming that neither rate is unreasonable, the one carrier cannot be compelled to alter its rate because the other's is higher or lower for the same service . . . Where an order is made under Section 3 an alternative must be afforded." (P. 650)

this Court recognized that the power to order the specific method of removal of discrimination is neither an essential power nor a specifically granted power of the Commission and that, therefore, the carriers are entitled, in the exercise of their managerial discretion, to determine the method of correction of any Section 3 violation which the Commission finds as long as lawful alternatives exist.

The District Court's apparent belief that the afore-quoted language from this Court's decision in the *Texas & Pacific* case is applicable only to orders under Section 3 to correct a Section 3 violation and not to orders entered under Section 15(1) to correct a Section 3 violation (R. 1438) is plainly wrong, and for several reasons. The first such reason is that literally an order cannot be entered under Section 3, for that section merely forbids discrimination. It does not authorize Commission action. The terms —a section 3 order—and—an order under Section 3—are common, however, and mean orders entered under Section 15(1) to correct violations of Section 3. This Court was speaking of such an order in the *Texas & Pacific* case and both the majority and minority opinions so state. Thus, in the majority opinion, at page 634, Mr. Justice Roberts refers to the Court's prior order restoring the cause to the docket for reargument and directing counsel's attention to specific questions of undue preference and prejudice "within the sense and meaning of Sections 3(1) *and* 15(1) of the interstate commerce act . . ."* Mr. Justice Stone begins his dissenting opinion as follows:

> "The Interstate Commerce Commission, acting under Section 3(1) and Section 15(1) of the Interstate Commerce Act . . . has found", etc.

The statements thus quoted also defeat any possible claim that the language in the *Texas & Pacific* decision is applicable only to cease and desist orders entered under Section 12 of the Act.

POINT THREE

THE DISTRICT COURT ERRED IN DISMISSING THE PETITION OF THE PLAINTIFFS BELOW, AND IN REFUSING TO ISSUE AN ORDER PERMANENTLY ENJOINING ENFORCEMENT OF THE COMMISSON'S AD INTERIM ORDER.

The Commission's order, which appellants sought and seek to have enjoined, set aside and forever annulled, does not represent the lawful exercise of lawful authority by the

---

*The complete text of said order, as set forth in footnote 10 to the Court's opinion is as follows:

> "This cause is restored to the docket for reargument upon all questions involved, and the attention of counsel is invited to the question whether the respective relations of the Louisiana ports and the Texas ports to the export, import, and coastwise traffic affected, and to the rates condemned, by the orders in controversy are such that the Louisiana ports may be regarded as localities unduly or unreasonably preferred by such rates within the sense and meaning of sections 3(1) and 15(1) of the interstate commerce act and that the Texas ports may be regarded as localities unduly or unreasonably prejudiced by such rates within the sense and meaning of the same sections." Journal, October Term, 1931, P. 342.

Commission, but constitutes rather one phase of a social and economic experiment upon which the Commission has embarked under the imagined pressure of misinterpreted Congressional legislation (see pages 52 to 53 hereof). The late Commissioner Porter virtually so pointed out, in a preface to his vigorous dissenting opinion, stating,

> "I am forced to dissent from the majority report, first, because of its one-sided and inadequate statement of a number of the important facts; second, because the class-rate uniformity called for by the findings of the majority, . . . and the manner in which it is to be accomplished, not only are without adequate support upon the record and ignore the standards of rate-making consistently followed by this Commission throughout its 58-year history, but in my opinion ignore and are contrary to the best interests of the shipping public, as well as of the railroads, in each of the territories affected . . . ;" (Rep. 709, R. 324)

The cost of the experiment will be borne, if the Commission's order is permitted to become effective, almost entirely by the shippers and receivers of freight in Official Territory. As has hereinbefore been pointed out, Official Territory class rates will, if the ad interim order of the Commission is sustained, and the Commission's Ex Parte 162 order is not modified, be authorized to be increased 37½% over their 1945 levels. Class rates are of far greater importance in Official Territory, both relatively and actually, than in either Southern Territory or Western Territory, and both the District Court and the Commission have so found. (Rep. 638, R. 253; Rep. 565-6, R. 180-1; R. 808, 1451) Not only does a much larger proportion of the total traffic move on class rates in Official Territory than moves on class rates in either the South or the West but because the total volume of traffic in Official Territory far exceeds the total volume of traffic in either Southern Territory or Western Territory, the actual volume of class rate traffic in Official Territory far exceeds the actual volume of traffic moving on such rates in either the South or the West. The shippers and receivers of freight in Official Territory will be required to pay the aforementioned greatly increased freight charges to the Official Territory carriers. These carriers in turn will either become the beneficiaries of increased rates which are higher than they sought, or will, as is more likely, be required to pay substantial portions of their increased revenues to the Southern and Western carriers in the form of divisions of joint rates for interterritorial movement. The class rate reductions which the Commission has ordered in the South and West to complete its uniformity experiment cannot fail to reduce the revenues of the carriers serving in those territories, and, when the Commission becomes faced with the problem of determining a fair basis for dividing interterritorial revenues between the participating carriers, it will find that the Act requires it to consider, among other things,

> ". . . the efficiency with which the carriers concerned are operated, *the amount of revenue required to pay their respective operating expenses, taxes, and a fair return on their railway property* held for and used in the service of transportation . . . *and any other fact or circumstance* which would ordinarily, without regard to the mileage haul, entitle one carrier to a greater or less proportion than another carrier of the joint rate, fare or charge." (Sec. 15(6))

There is no escape from the conclusion that Official Territory shippers and receivers of freight will be required to underwrite and subsidize the uniformity experiment which the Commission has so unlawfully decreed shall be performed. The late Commissioner Porter so pointed out in his dissenting opinion (Rep. 716, R. 331)

Where an order of the Commission is made which is so arbitrary and so transcendent of the Commission's lawful authority as the Commission's minimum rate order here under attack, and where such an order will assuredly result in heavy additional costs to Northern shippers, which additional costs are clearly unwarranted, this Court should exhibit no hesitancy in effectively preventing its illegal enforcement. This Court should reverse the order of the District Court and remand the proceeding with instructions to that Court to issue a permanent injunction.

Respectfully submitted,

THE HONORABLE JAMES L. MCCONAUGHY,
Governor of the State of Connecticut

APPENDIX

Conclusions, Findings and Order of the Interstate Commerce Commission in Ex Parte 162

Conclusions

We therefore pass to our ultimate findings and conclusions. Before stating them, we think the following observations should be made.

There are here involved all the freight rates and charges, and all the passenger fares of the railroads and many other carriers of the Nation, large and small. What we do will directly affect production and distribution in the industries of the Nation, and the welfare of its various regions, as well as the transportation industry. It will have its effect upon the forces tending to economic stabilization or the reverse. We have accorded every reasonable opportunity for those in any way affected to be heard, while pressing the proceedings with as much speed as the size and complexity in detail of the proposals permitted. No case has ever received from us more earnest study. What was said in dealing with another difficult problem of great importance may be repeated here (*Consolidation of Railroads*, 159 I. C. C. 522, at page 524):

> "In a matter of this magnitude in scope and complexity in detail, even after the most careful study and the fullest and freest interchange of views by those charged with the duty of preparing this plan, there must remain many differences of opinion as to the several components parts, both large and small, comprised in the final result. Such is here the case. While a clear majority of us, although not always the same majority, have agreed as to each part of the plan proposed, not all of us have agreed as to all its parts, but all concur in the result. * * *"

When, in 1920, shortly after the close of federal control of the railroads, we were dealing with a situation in many ways comparable with that now presented, the late Commissioner Eastman in concurring in our authorization of large increases in freight rates and passenger fares, made certain observations which are forceful here. He said in part (*Increased Rates, 1920*, 58 I. C. C. 220, at page 258):

"Summing the matter up, conditions are critical and they have not been made less so by the transition from federal to private control. The evil of poor service we have with us, and it is certain that the health of the nation will suffer seriously unless this evil is cured. It is my best judgment that the railroads cannot function successfully without materially increased rates, and I am also persuaded that it is in the best interest of the country that the present plan of operations should receive without delay the best test that can be given it. Under all the circumstances, it follows that it would be a mistake if the railroads were now accorded rates designed to produce substantially less revenue than their responsible executives with unanimity assert that they need in order that good service may be provided. What revenue will actually be produced no one can tell. If the rates prove unduly high, they may later be reduced. The present proceeding has nothing of finality about it and in many respects is similar to a suspension case, where the question is whether or not certain proposed rates shall be permitted to take effect without suspension, a matter left by the act to the discretion of the Commission."

Findings

From a consideration of the entire record in these proceedings, we conclude and find:

1. It is requisite for the carrying out of the purposes of the national transportation policy, and the development, coordination, and preservation of a national transportation system adequate to meet the needs of commerce, the postal

service, and the national defense, and in order that freight rates and charges shall be such as to move the greatest volume of traffic, while providing adequate and efficient transportation at the lowest cost consistent with the furnishing of such service, and to enable the petitioning carriers by railroad and by water under honest, economical, and efficient management to provide such service, that there be substantial increases in the basic freight rates and charges of the petitioners, and the continued maintenance of the present temporarily increased basis of passenger fares and charges. That the basic freight rates and charges, and passenger fares and charges, increased or authorized to be continued in the manner and to the extent herein found and approved in detail, will be just and reasonable, but that the full amount of the increases in the form proposed in the petition in Ex Parte No. 162 have not been shown to be just and reasonable, in respects not herein approved.

2. Except as otherwise specifically provided in these findings or in the appendix thereto, all basic freight rates and charges of the petitioning rail and water carriers justly and reasonably may be increased for the future by 20 per cent. By basic freight rates and charges are meant those now in effect, whether established by order of the Commission or voluntary act of the petitioning carriers (including rates held under investigation and suspension orders)—excluding, however, from such freight rates and charges as now in effect such portion thereof as represents the interim increases authorized by the report and order entered herein on June 20, 1946. Basic freight rates and charges include also rates prescribed by outstanding orders of the Commission, when and as the rates therein prescribed become effective, subject to any exceptions specifically noted herein.

3. The basic freight rates and charges on the commodities specified in appendix 1 may be increased by the specific

percentages or amounts shown therein, and such rates increased as provided therein, will be just and reasonable for the future.

4. The following increases in the basic freight rates and charges for miscellaneous services will be just and reasonable for the future:

Rates and charges on milk and cream in passenger and freight service, including all commodities listed in the applicable basic milk and cream tariffs, may be increased 15 per cent.

Rates and charges for protective services published in Perishable Protective Tariff No. 14, Agent Quinn's I. C. C. No. 25, may be increased 15 per cent.

Charges for collection-on-delivery services may be increased 25 per cent.

Rates and charges for switching, including intraplant and intraterminal switching, whether or not absorbed by line-haul carriers, may be increased 25 per cent.

Where tariffs provide for absorption of charges for switching, subject to a stated minimum revenue for a line-haul carrier, such stated minimum may be increased by the same amount as the charge or charges for switching.

Charges for loading or unloading provided in section 2 of Consolidated Classification Rule 15 may be increased to 5 cents per 100 pounds.

Rates and charges for special train, trap- and ferry-car, and crane service, and for handling railway equipment on its own wheels, may be increased 25 per cent.

All commodity freight rates, and rates and charges on freight in truck bodies, may be increased 25 per cent.

Rates and charges for handling commodities (except milk and cream) in baggage or passenger-train service, including excess baggage but excluding corpses, may be increased 25 per cent.

Except as otherwise herein specifically provided, an increase of 25 per cent may be made in the basic rates and charges for accessorial and terminal services such as storage, handling, loading, unloading, reconsignment, diversion, fabrication, other transits, weighing, etc., other than (a) demurrage charges, on which no increase is here authorized, and (b) charges for handling, loading, or unloading export, import, coastwise, or intercoastal traffic which do not affect the measure of the line-haul rate and are not in addition to the line-haul rate, on which there will be no increase.

Terminal railroads may increase their charges to the railroads for performing the loading and unloading of livestock at public stockyards, by 15 per cent, and such increased charges should be absorbed, or otherwise paid, by the railroads performing the line-haul transportation, except when they accrue for unloading or reloading en route at the request of the shipper, consignee, or owner, or to try an intermediate market, or to comply with quarantine regulations.

Minimum charges per shipment may be increased to $1, except on single shipments of milk and cream. Minimum charges per car in line-haul service, as provided in Consolidated Classification Rule 13 and corresponding rules in other tariffs, may be increased to $20. Minimum line-haul rates where pick-up and delivery services are included may be increased to 50 cents, as provided in our interim findings.

Except as otherwise provided in appendix 1, rates on articles under the general commodity grouping of Manufactures and Miscellaneous, class rates and rates on less-than-carload and any-quantity traffic may be increased 25 per cent within official territory, as defined in our prior (interim) report at page 743, 20 per cent within and between other territories, and 22.5 per cent between official territory and points in other territories.

5. Where through rates are made by combining separately stated rates (two-factor or multiple-factor rates),

such combination will not be increased separately, except as otherwise provided as to rates on grain and grain products, but a single increase should be applied to the entire through rate.

6. Joint, international rates to and from Canada or Mexico may be increased to the same extent and in the same manner as is here authorized within the United States. Where rates on international traffic are made by the use of combinations on the international border, the factor within the United States to or from the international border may be increased to the same extent and in the same manner as is here authorized within the United States.

7. In the initial publication, rates applicable on import, export, coastwise, and intercoastal traffic may be increased to the same extent and in the same manner as provided for domestic rates. The findings herein as to reasonableness are predicated upon the assumption that after the increases become effective such rates will be revised promptly by specific publication to restore recognized port relationships, if such adjustment cannot be made simultaneously with publication of the increases.

8. In the initial publication rates with ocean, lake, and inland waterways carriers may be increased to the same extent and in the same manner as provided for all-rail rates. The findings herein as as to reasonableness are predicated upon the assumption that after the increases become effective, such rates will be revised promptly by specific publication to restore existing differentials in cents per 100 pounds or other unit, if such adjustment cannot be made simultaneously with publication of the increases.

9. The increases herein provided may be applied to joint rates with motor carriers to the same extent and in the same manner as is proposed for all-rail rates.

10. Fractions should be disposed of as follows: In connection with rates or charges which, without the emergency increases of July 1, 1946, are approximately 5 cents or lower, resolve fractions to the nearest quarter cent; rates higher than approximately 5 cents, but not higher than approximately 10 cents, resolve fractions to the nearest half cent; rates higher than approximately 10 cents, resolve fractions to the nearest whole cent, except on grain and grain products and articles taking the same rates; in all instances resolve fractions in connection with commodity rates to the nearest half cent. When, in connection with rates rounded out to quarter cents, fractions fall midway between two quarter cents, increase to the next higher quarter cent; and similarly in conection with rates rounded out to half and to whole cents.

11. The increase in passenger fares authorized by our order in Ex Parte No. 148, dated January 21, 1942, as modified by our order in Ex Parte No. 148, dated October 30, 1945, may be continued in effect without expiration date, and for the future will be just and reasonable.

12. Where carriers earn specific stated amounts as their compensation or division out of joint through rates, such amounts should be increased in the same percentages as the joint through rates.

13. When accessorial charges or switching charges are increased as herein authorized, and such charges prior to the increase were absorbed wholly or in part by a carrier, the amount of the absorption should be increased in the same proportion as the increase in the accessorial or switching charge.

14. The increases in freight rates and charges herein authorized shall supersede and be in lieu of the emergency increases authorized in our prior (interim) report and

order of June 20, 1946. The authorized increased rates and charges may be made effective in the period January 1, 1947, to February 28, 1947, upon not less than 5 days' notice to the Commission and to the general public, by filing and posting in the manner prescribed in the Interstate Commerce Act.

15. Rates and charges increased as herein permitted are not considered as prescribed rates, within the meaning of Arizona Grocery Co. v. Atchison T. & S. F. Ry. Co., 284 U. S. 370.

16. Rates, increased as authorized herein, within official territory from and to border points may be applied as a minimum on interterritorial traffic through such border points to the extent necessary to conform to the provisions of section 4 (1) of the act, in like manner as was authorized in our prior (interim) report.

17. The various railroads, other than the class I railroads, and water carriers which have become parties to this proceeding, will be authorized to make the same increases as the class I railroads. If this authorization does not dispose of the issues raised by their petitions, the matter may be called to our attention, provided any disputed matters prove to be incapable of adjustment informally.

18. Freight forwarders may increase their rates and charges simultaneously and ratably, or in direct proportion to analogous or corresponding increases made in the freight rates and charges of the common carriers whose facilities and transportation services they use. No order is considered necessary to enable them to publish and file such increased rates, subject to possible protest and suspension, other than under section 405 of the act. Appropriate orders will be entered under that section upon proper applications.

19. The record will be held open for the purpose of giving consideration to any necessary readjustments or corrections which the circumstances may warrant, if brought to our attention in the manner prescribed in our Rules of Practice. We will aid in the informal adjustment of any matters arising hereunder, if our aid shall be deemed helpful.

20. Appropriate orders for relief under sections 4(1), 6, 217, 306, and 405 of the Interstate Commerce Act will be entered; except as specified in the following sentence of this finding our outstanding orders will be modified accordingly. As the effectiveness of our order in Class Rate Investigation, 1939, docket No. 28300, is now stayed and enjoined, we do not hereby in any manner suspend or supersede, or modify or affect the finding and order entered in that proceeding.

Chairman Barnard and Commissioner Johnson did not participate in the disposition of this proceeding.

Appendix I

(Omitted in printing)

Order

At a General Session of the Interstate Commerce Commission, held at its office in Washington, D. C., on the 5th day of December, A. D. 1946.

Ex Parte No. 162, Increased Railway Rates, Fares, and *Charges, 1946; Ex Parte No. 148, Increased Railway Rates, Fares, and Charges, 1942:*

It appearing, That further supplemental petitions have been filed, further hearings have been held, and parties have been heard in oral argument and upon briefs filed October 25, 1946;

And it further appearing, That the Commission, on the date hereof, has made its report in these proceedings containing its findings of fact and conclusions thereon, which said report, together with the reports heretofore made in these proceedings, are hereby referred to and made a part hereof;

It is ordered, That the increased freight rates and charges therein authorized shall supersede and be in lieu of the emergency increases authorized in the prior report of June 20, 1946. The authorized increased rates and charges may be made effective during the period from January 1, 1947, to February 28, 1947, upon not less than five days' notice to the Commission and to the general public, by filing and posting in the manner prescribed in the Interstate Commerce Act;

It is further ordered, That outstanding unexpired orders in other proceedings are hereby modified so as to permit the increases in freight rates and charges herein authorized to be established; provided, however, that the provisions of this paragraph shall not be construed to suspend or supersede or modify or affect the findings and order entered in *Class Rate Investigation, 1939,* Docket No. 28300, the operation of which is stayed by court order;

It is further ordered, That rates, increased as authorized herein, within official territory from and to border points, may be applied as a minimum on interterritorial traffic through such border points to the extent necessary to conform to the provisions of section 4(1) of the act, in like manner as was authorized in the prior report of June 20, 1946;

It is further ordered, That the authorization contained in the report and order of June 20, 1946, respecting increased rates on iron ore to the upper lake ports and increased handling charges on iron ore at those ports, is hereby canceled effective January 1, 1947;

It is further ordered, That the increase in passenger fares authorized by the order in Ex Parte No. 148, dated January 21, 1942, as modified by the order in Ex Parte No. 148, dated October 20, 1945, be, and it is hereby, continued in effect without expiration date;

And it is further ordered, That all tariffs or supplements changing rates or charges under the authority of this order, which rates or charges are now maintained or held in force by virtue of outstanding orders of the Commission, shall bear on their title pages specific reference to this order.

Fourth Section Order No. 15650

It appearing, That the Commission in its report in the above-entitled proceedings, hereby referred to and made a part hereof, has approved certain proposed increases for the transportation of property over the lines of rail and water carriers, parties to the proceedings, operating within the United States;

It further appearing, That the said increases as approved and authorized by the Commission in the above-entitled proceedings cannot be published and made effective in the manner authorized therein without producing in some instances rates or charges that yield greater compensation in the aggregate for the transportation of like kind of property for a shorter than for a longer distance over the same line or route in the same direction or greater compensation as a through rate than the aggregate of intermediate rates or charges subject to the Interstate Commerce Act, in contravention of the fourth section of said act;

It is ordered, That, until further order of the Commission, carriers subject to the Interstate Commerce Act parties to the proceedings be, and they are hereby, authorized to establish the increases so approved without observing the provisions of section 4 of the act; *Provided,* That (1) the authority contained herein to maintain rates in contravention of the aggregate-of-intermediates provision of section 4 shall expire July 1, 1947; and (2) where rates established under the authority contained herein are increased by relatively greater amounts to or from intermediate points than to or from more distant points, or where increases are made in rates to or from intermediate points and not to or from more distant points, thereby creating or increasing departures from the long-and-short-haul provision of section 4 of the act, the relief herein shall expire July 1, 1947, except that if applications are filed on or before July 1, 1947, for relief to continue any of such rates beyond that date, the rates included in and covered by such applications may be continued until the determination thereof by this Commission.

It is further ordered, That in those instances in which rates in contravention of the provisions of section 4 are established under the authority contained herein the schedule or schedules containing such rates shall make reference to this order in the manner required by rule 28 of Tariff Circular No. 20.

Supplemental Fourth Section Order No. 14500

It appearing, That the Commission by its order this day entered in the above proceeding, which is hereby referred to and made a part hereof, has approved certain proposed increased fares for the transportation of passengers over the lines of carriers in the United States; and upon further consideration of fourth section order No. 14500, entered January 21, 1942, in *Increased Railway Rates, Fares, and Charges, 1942,* 248 I. C. C. 545, as amended by supplemental orders entered July 6, 1942, August 20, 1942, and September 9, 1942, granting relief from the long-and-short-haul and aggregate-of-intermediates provisions of section 4 of the interstate commerce act necessary to establish increased fares previously authorized in the proceeding:

It is ordered, That fourth section order No. 14500, entered and amended as aforestated, be, and it is hereby, further modified and amended so as to provide that the same measure of relief from the aggregate-of-intermediates and long-and-short-haul provisions of section 4 of the act as is authorized therein with respect to present fares and charges shall also apply, subject to the same terms and conditions, to passenger fares and charges between the same points increased as authorized by order entered this day in the proceeding referred to above and made a part hereof.

By the Commission

W. P. BARTEL,
Secretary.

(SEAL)

INTERSTATE COMMERCE ACT, SECTION 15 (1)

"That whenever, after full hearing, upon a complaint made as provided in section 13 of this part, or after full hearing under an order for investigation and hearing made by the Commission on its own initiative, either in extension of any pending complaint or without any complaint whatever, the Commission shall be of opinion that any individual or joint rate, fare, or charge whatsoever demanded, charged, or collected by any common carrier or carriers subject to this part for the transportation of persons or property as defined in the first section of this part, or that any individual or joint classification, regulation, or practice whatsoever of such carrier or carriers subject to the provisions of this part, is or will be unjust or unreasonable or unjustly discriminatory or unduly preferential or prejudicial, or otherwise in violation of any of the provisions of this part, the Commission is hereby authorized and empowered to determine and prescribe what will be the just and reasonable individual or joint rate, fare, or charge, or rates, fares or charges, to be thereafter observed in such case, or the maximum or minimum, or maximum and minimum, to be charged, and what individual or joint classification, regulation, or practice is or will be just, fair and reasonable, to be thereafter followed, and to make an order that the carrier or carriers shall cease and desist from such violation to the extent to which the Commission finds that the same does or will exist, and shall not thereafter publish, demand, or collect any rate, fare, or charge for such transportation other than the rate, fare, or charge so prescribed, or in excess of the maximum or less than the minimum so prescribed, as the case may be, and shall adopt the classification and shall conform to and observe the regulation or practice so prescribed."

CERTIFICATE OF SERVICE

I hereby certify that I have served the foregoing brief upon counsel for the adverse parties in this proceeding by causing a copy thereof to be mailed, postage prepaid, to each of said counsel.

Dated this 8th day of February, 1947, at Boston, Massachusetts.

Transportation Act of 1940, Section 5 (b), commonly known as the Ramspeck Resolution (49 U. S. C. A. Supp. 1945, Sec. 3, footnote; 54 Stat. 902) 4
United States Code, Title 28, Section 47a 2

DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF NEW YORK

Civil No. 2311

THE STATES OF NEW YORK, DELAWARE, INDIANA, MARYLAND, MICHIGAN, NEW JERSEY, OHIO, WISCONSIN AND THE COMMONWEALTH OF PENNSYLVANIA,

Plaintiffs;

vs.

THE UNITED STATES OF AMERICA,

Defendant

Civil No. 2337

THE ATCHISON, TOPEKA AND SANTA FE RAILWAY COMPANY, ET AL.,

Plaintiffs,

vs.

THE UNITED STATES OF AMERICA,

Defendant

STATEMENT OF JURISDICTION

In compliance with Rule 12 of the Revised Rules of the Supreme Court of the United States, The Atchison, Topeka and Santa Fe Railway Company, et al., submit herewith their statement particularly disclosing the basis upon which the Supreme Court has jurisdiction on appeal to review the final decree and order of the District Court entered in the above entitled consolidated causes on May

27, 1946. A petition for appeal was filed by The Atchison, Topeka and Santa Fe Railway Company, et al., on June 25th, 1946, and is presented to the District Court herewith.

I

Jurisdiction

The jurisdiction of the Supreme Court to review by direct appeal the final decree and order entered in these causes is conferred by Title 28, Section 47a of the United States Code, and particularly the following provisions thereof:

> "A final judgment or decree of the District Court in the cases specified in section 44 of this title may be reviewed by the Supreme Court of the United States if appeal to the Supreme Court be taken by an aggrieved party within sixty days after the entry of such final judgment or decree, and such appeals may be taken in like manner as appeals are taken under existing law in equity cases." (36 Stat. 1150; 38 Stat. 220)

The following decisions sustain the jurisdiction of the Supreme Court to review the final decree and order on direct appeal in this case:

Ann Arbor R. Co. v. *United States*, 281 U. S. 658;
Texas & Pacific Ry. Co. v. *United States*, 289 U. S. 627;
United States v. *Hancock Truck Lines, Inc.*, 324 U. S. 774.

II

Statutes Involved

The principal statute involved is the Interstate Commerce Act of February 4, 1887 (24 Stat. 379), as amended (Title 49 U. S. C. A. Sections 1, 3(1) and 15), and particularly the following provisions thereof:

> "It is hereby declared to be the national transportation policy of the Congress * * * to encourage the

establishment and maintenance of reasonable charges for transportation services without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices * * *." (49 U. S. C. A. Supp. 1945, p. 4; 54 Stat. 899)

"Section 1(4): It shall be the duty of every common carrier subject to this chapter to provide and furnish transportation upon reasonable request therefor and to establish * * * just and reasonable rates, fares, charges and classifications applicable thereto; * * *." (49 U. S. C. A. Sec. 1(4))

"Section 1(5)(a): All charges made for any service rendered or to be rendered in the transportation of passengers or property as aforesaid, or in connection therewith, shall be just and reasonable, and every unjust and unreasonable charge for such service or any part thereof is prohibited and declared to be unlawful" (49 U. S. C. A. Sec. 1(5)(a)).

"Section 3(1): It shall be unlawful for any common carrier subject to the provisions of this chapter to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit points, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, to any undue or unreasonable prejudice or disadvantage in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however,* That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description." (49 U. S. C. A. Sec. 3(1)).

There is also involved in these causes a Resolution of Congress contained in the Transportation Act of 1940, Section 5(b), commonly known as the Ramspeck Resolution (49 U. S. C. A. Supp. 1945, Sec. 3, footnote; 54 Stat. 902), which reads as follows:

> "(b) The Interstate Commerce Commission is authorized and directed to institute an investigation into the rates on manufactured products, agricultural commodities, and raw materials, between points in one classification territory and points in another such territory, and into like rates within any of such territories, maintained by common carriers by rail or water subject to Part I of the Interstate Commerce Act, as amended, for the purpose of determining whether said rates are unjust and unreasonable or unlawful in any other respect in and of themselves or in their relation to each other, and to enter such orders as may be appropriate for the removal of any unlawfulness which may be found to exist: *Provided,* That the Commission in its discretion may confine its investigation to such manufactured products, agricultural commodities, and raw materials, and the rates thereon as shippers thereof may specifically request be included in such investigation."

III

The Issues and the Ruling Below

This proceeding was initiated by the Interstate Commerce Commission on July 29, 1939 to investigate the lawfulness of the freight classifications throughout the United States (I. C. C. Docket No. 28310) and the lawfulness of the class rates throughout all the United States east of the Rocky Mountains (I. C. C. Docket No. 28300). Said class rates, with few exceptions, had been prescribed by the Commission itself in previous extended investigations as being just, reasonable and nondiscriminatory. Such rates vary as between the several rate territories and within the respective territories, reflecting and pursuant to the differences in costs of transportation and other factors of rate making which, prior to its said orders, were always recognized by the Commission as controlling. The class rates in the western territories had been prescribed by the Commission at levels substantially higher than the levels prescribed by it for Official Territory, which comprises the heaviest traffic density territory and is that part of the country lying north of the Ohio and Potomac Rivers and east of the Mississippi. ("Official Territory," as referred to herein, includes "Illinois Territory.")

The Commission conducted extensive hearings in these proceedings over a period of years and submitted in the record of the proceedings the most comprehensive study ever made of costs of railroad transportation in this country, a cost study made under the direction of the Commission's cost section. More than five thousand pages of testimony and hundreds of exhibits were introduced into the record. Wide publicity was given to the proceeding and the Commission invited shippers to appear.

The fact that the shippers in the western territories are satisfied with the long-standing rate structure was demonstrated forcefully, since not a single shipper or receiver of freight in Southwestern Territory testified at the hearings, and only three commercial witnesses, speaking for individual establishments in the extensive Western Trunk Line Territory testified. One of those three urged that the western class rates be maintained on a basis thirty per cent higher than class rates in Official Territory.

The oral arguments were held before the full Commission for a period of ten days, June 14 to June 23, inclusive, 1944. The case was submitted to the Commission on July 15 of that year. The Commission announced its decision on May 15 of the following year. That decision, with four Commissioners dissenting, or concurring only in part, is reported at 262 I. C. C. pages 447 to 766, inclusive. (Exhibit 1 attached hereto)

In its report, the Commission found that the cost study possessed sufficient attributes of accuracy to enable the Commission to rely upon it. (262 I. C. C. at 693) The Commission also found that the study showed the costs of less-than-carload traffic in the western territories to be from 27% to 34% higher than in Official Territory, 39% higher than in the Pocahontas Region of Official Territory, and from 37% to 45% higher than in Southern Territory. It further found the costs of carload traffic in the western territories to be from 16% to 18% higher than in Official Territory.' The Commission's cost study thus confirmed the general knowledge of the differences in territorial costs theretofore recognized by the Commission and underlying the historic differences between the rate levels in Western Territory and Official and Southern Territories as prescribed by the Commission. Nevertheless the Commission held by its said orders that the class rates and territorial rate differentials which it had itself established, and previously approved after extensive investigations and mature consideration, were all unjust, unreasonable, discriminatory, and unlawful, and concluded that all the interstate class rates from the Rocky Mountains to the Atlantic Ocean should be identical without regard to the existing territorial differences in costs and other transportation considerations. It ordered all the interstate class rates set aside and approved for application its own single scale of rates. (262 I. C. C. at 701) It provided for the preparation of a single uniform classification of freight, and concluded "That such revised uniform class rates and classification ratings shall be made applicable simultaneously," with the completion of such uniform classification. (262 I. C. C. at 702)

To effectuate its conclusion that all the presently effective class rates are unlawful because not uniform, and that uniform rates should be applied, the Commission ordered all the carriers east of the Rocky Mountains, including plaintiffs, to cancel the existing class rates and to maintain, during the period of preparation of the uniform classification, as an interim basis, new class rates which "will approach as a preliminary step, the uniformity of class rate structure which we have previously found will be just, fair and reasonable" 262 I. C. C. at 703). This so-called *ad interim* scale, would reduce by ten per cent the class rates of carriers in the western territories where the cost of performing the service is highest, would reduce, also by ten per cent, the class rates of carriers in the Southern Territory where the costs of performing the service is substantially lower than in the west, would increase by ten per cent the intraterritorial class rates of carriers in Official Territory where the cost of performing the transportation service on carload traffic is lowest, and would uniformly reduce by ten per cent all interterritorial class rates notwithstanding the varying costs.

Petitions for reopening and reconsideration were filed by several parties. The petition of the Western Lines pointed out, in part, that the newly prescribed rates would increase the deficit which the Commission found already to exist in the transportation of less-than-carload traffic, and would be confiscatory.

On October 30, 1945 the Commission issued its supplemental report and order (Exhibit 2, atached hereto) in which it rejected the petition of the Western Lines for reopening and reconsideration. The supplemental report and order made certain minor changes in the original report and order, and provided that the newly prescribed rates should become effective on January 1, 1946.

On November 27, 1945, the States of New York, Delaware, Indiana, Maryland, Michigan, New Jersey, Ohio and Wisconsin and the Commonwealth of Pennsylvania filed their petition in the District Court of the United States for the Northern District of New York, seeking an order enjoining, setting aside and annulling the said reports and orders of the Commission. The District Court granted petitions to intervene on behalf of the thirty-three western railroads making this statement, the Governors of all the New England States, the Interstate Commerce Commission, the southern States and southwestern States, certain middle western States, the Southern Governors' Conference, and several State commissions.

After hearing, on oral argument and on brief, an injuction *pendente lite* was granted on December 20, 1945, restraining the enforcement of the Commission's orders. (Exhibit 3, attached hereto) *

Thereafter, the western carriers which had intervened in the initial suit filed their petition in the same court also seeking to set aside the said orders of the Commission. The States of New York and Ohio and the Governors of all the New England States intervened as parties plaintiff, the Interstate Commerce Commission, the southern States, the Southern Governors' Conference, the western States and their commissions intervened as parties defendant. By order of the court, the two causes were consolidated into a single consolidated cause.

The District Court, consisting of the Honorable Harrie B. Chase, Circuit Judge, and the Honorable John C. Knox and Stephen W. Brennan, District Judges, held a hearing on February 18 to 21, inclusive, during which the Court received certain additional testimony and exhibits relating to the issues of the confiscation which would be caused to the western carriers if the proposed rates were to be placed in effect, received briefs and heard extended argument.

---

* (Clerk's Note.—Exhibits 3, 4, and 5 are printed as appendices to the jurisdictional statement in No. 343 and are not reprinted here.)

The Court then considered the case at length. On May 9, 1946, the Court filed a thirty-four page opinion, concluding that the petitions should be dismissed without prejudice to another suit by the western carriers to enjoin the new rates after a test period. (Exhibit 4, attached hereto) The opinion did not discuss or refer to the findings of the Commission that the costs of transportation in the western territories are substantially higher than in Official Territory. It did not point to any evidence or findings sustaining the Commission's conclusion that it has become unlawful for carriers in different parts of the country whose costs of transportation are substantially different, to charge different rates.

On May 23, 1946, the District Court heard extended arguments on motions to continue the injunction pending appeal. On May 27, 1946, it filed its final decree and order dismissing the petitions in accordance with the opinion and continuing the stay of the Commission's orders, pending the determination of appeals. (Exhibit 5, attached hereto)

IV

The Questions Are Substantial

The decision of the Commission in this proceeding is generally recognized as the most momentous and far-reaching in the history of the Commission. Its tremendous economic importance is indicated, but not adequately measured, even by its broad geographical scope, by its serious and immediate financial effect, and by the large numbers of States, carriers and other parties to these proceedings.

The decision marks a clean break with the principles of rate making that have been applied through the country for generations, by the carriers, the Commission, and the courts. The Commission, in its report, referred to "the magnitude and complexity of the issues in these proceedings", (262 I. C. C. at 455) and concluded that the provisions of the Transportation Act of 1940 had so changed the legal tests of the lawfulness of rates and had so "enlarged the power of the Commission over this subject" (262 I. C. C. at 689) that all the existing territorial differences in costs of transportation, density of traffic, composition and consist of traffic could and should be disregarded and flat uniform class rates ordered into effect. In thus abandoning the criteria by which the lawfulness of rates has always heretofore been tested, the Commission has established a novel rule that it is unreasonable and discriminatory for different carriers operating in different territories to charge different rates, mile for mile, notwithstanding the fact that the costs and other transportation conditions are different, and the fact that the present rates thus condemned were established by the Commission itself in recognition of such different conditions.

The Commission has further held that the present class rates for less-than-carload traffic in the western territories which are lower than the costs of transporting that traffic, should be further lowered for the purpose of establishing uniformity with the rates in Official Territory, in disregard of the territorial differences in the costs of transporting such traffic. The District Court has held that such reduced rates should be put into effect for a test period, notwithstanding the Commission's finding that even the present rates produce a deficit.

The District Court concluded that the questions of law here are "of great importance to the shippers, the carriers and the public of this country. There are reasonable and serious doubts as to the determination of these novel and important questions." (See Exhibit 5, p. 4, attached hereto)

We believe the questions presented by this appeal are novel and substantial and are of the utmost public importance.

EXHIBIT 1 13

24573

INTERSTATE COMMERCE COMMISSION

No. 28300

CLASS RATE INVESTIGATION, 1939

No. 28310

CONSOLIDATED FREIGHT CLASSIFICATION

Submitted July 17, 1944. Decided May 15, 1945

PART I

Upon investigation in No. 28310 into descriptions of articles, carload minimum weights, and ratings in official, Illinois, southern, and western classifications applicable to transportation of property throughout the United States, in interstate or foreign commerce, by railroad, by water, or partly by railroad and partly by water, found:

1. That the present official, Illinois, southern, and western classifications, insofar as the ratings named therein are concerned, as a whole, are and for the future will be unjust and unreasonable, in violation of section 1 (4) and (6) of the Interstate Commerce Act.
2. That the present official, Illinois, southern, and western classifications, insofar as the ratings named therein are concerned, as a whole, because of the substantial number of differences in such ratings, result and will result in undue and unreasonable preference and advantage and in undue and unreasonable prejudice and disadvantage, in violation of section 3 (1) of the act.
3. That to make the classification fair and reasonable it is essential that the grouping of analagous articles and those with similar transportation characteristics, shall be made according to accepted and recognized principles of classification, and that scales of class rates be maintained providing different rates for the several classes of property, which shall bear a just and reasonable relation each with the others.
4. That it is impossible, without a basic unity in classification ratings throughout the country, to maintain a just and reasonable relation between the class rates on commodities moving in carload and less-than-carload lots, or as between competing commodities moving at class rates.
5. That the establishment of a uniform classification of property for transportation, with reference to which class rates of respondents are or may be made or prescribed, will be just and reasonable; and to the extent the classifications established by respondents are different and nonuniform, to that extent their existing classifications, as embraced within the Consolidated Freight Classification, are, and will be for the future, unjust and unreasonable in violation of section 1 (4) and (6) of the act.
6. That the findings as to uniformity are not intended to prevent establishment of exceptional classification ratings provided they are justified individually upon their own merits, do not violate the act, are not inconsistent with the national transportation policy, and do not tend to impair the general requirement of uniformity of classification.

7. That the general basis of the official classification, including the percentage relation between the classes, would be just and reasonable for application uniformly by respondents and should be established by them within a reasonable time.
8. That is it just and reasonable that a uniform classification should be established containing (*a*) classes, intermediate between the several classes in the official classification, corresponding to the columns prescribed in finding 1 in *Eastern Class Rate Investigation*, 164 I. C. C. 314, 373; 171 I. C. C. 481, 490; (*b*) the present regular classes which are multiples of class 1 (class 100); and (*c*) additional classes lower than the lowest class in the official classification. And that these classes in the uniform classification should be 80 in number ranging from class 400 to class 13.
9. That substantial uniformity exists in the present classifications as to descriptions of articles and carload minimum weights.
10. Respondents are given reasonable opportunity to initiate a lawful uniform classification before the Commission undertakes the task; respondents are expected to advise the Commission within 90 days from the service of this report whether they will undertake to make and tender a uniform classification based upon the findings herein. Jurisdiction retained to make such further order in the premises as may be proper in the event respondents decline to make and tender a uniform classification or omit to respond within the time specified.
11. That the uniform classification must be closely connected with the class scale or class scales of rates to be applied, to insure proper preservation of revenue for the carriers, and that the rates shall be just and reasonable and otherwise in conformity with the act.

Part II

Upon investigation in No. 28300 into lawfulness of interstate class rates, determined by ratings in official, Illinois, southern, and western classifications, applicable to transportation in interstate or foreign commerce of property by common carriers by railroad, by water, or partly by railroad and partly by water, subject to the Interstate Commerce Act, and the charges resulting therefrom, between all points in the United States except those in mountain-Pacific territory, found:

1. That the intraterritorial class rates (except as they apply to rail-and-water coastal service or relate to short- or weak-line arbitraries) applicable within official, Illinois, southern, southwestern, and western trunk-line territories, are, and for the future will be, unjust and unreasonable, in violation of section 1 (4) and (5) (a) of the act.
2. That the interterritorial class rates in issue in this proceeding applicable between official, Illinois, southern, southwestern, and western trunk-line territories, are, and for the future will be, unjust and unreasonable, in violation of section 1 (4) and (5) (a) of the act.
3. That the relation between the interterritorial class rates applicable from southern, southwestern, and western trunk-line territories to official and Illinois territories, on the one hand, and the intraterritorial class rates applicable within official and Illinois territories, on the other hand, makes, gives, or causes, and for the future will make, give, or cause, undue and unreasonable preference and advantage to official and Illinois territories as a whole and the shippers and receivers of freight located therein, and subjects, and for the future will subject, southern, southwestern, and

15

western trunk-line territories, as a whole, and the shippers and receivers of freight located therein, to undue and unreasonable prejudice and disadvantage, in violation of section 3 (1) of the act.

4. That a just and reasonable basis of class rates, not unjustly discriminatory or unduly preferential or prejudicial, to be observed by respondents with respect to the traffic described in findings 1, 2, and 3 immediately preceding, will be the following:

(*a*) The application, as a maximum for class 1, of the scale of rates shown in appendix 10.

(*b*) The rates herein prescribed are to be applied to the distances over the shortest possible rail route by which carload traffic can be interchanged between carriers without transfer of lading.

(*c*) Class-rate scales, other than class 1, shall bear percentage relations to the class 1 rates, as found to be just, fair, and reasonable in part I hereof. Rule prescribed for the disposition of fractions.

(*d*) Key point class rates based on the scale herein found reasonable may be established subject to our approval between points where such rates were prescribed by us in the prior general class-rate revisions.

(*e*) Such class rates shall apply to the ratings of commodities taking class rates as the same shall be rated in the uniform classification found to be just, fair, and reasonable in part I hereof.

(*f*) Such revised uniform class rates and classification ratings shall be made applicable simultaneously.

PART III

Pending establishment of the rate revisions and classification unification contemplated by the findings in part I and part II hereof, certain readjustments in the existing basis of class rates are required which will be just and reasonable and will bring to the minimum the preferences and prejudices found to be unlawful, as completely as it is practicable now to eliminate such violations. It is found that, on and after the effective date of the order to be entered in this proceeding:

1. The existing interstate class rates applicable to freight traffic moving at the classification ratings within southern, southwestern, and western trunk-line territories and interterritorially between those territories, and also between those territories and official territory, will be unjust and unreasonable unless reduced 10 percent, subject to specified distance rates as minima; but no changes in existing exception rates or column rates, or in groupings in connection with the present class rates, are contemplated by this finding.

2. Simultaneously as part of the adjustment, the existing applicable interstate class rates for freight traffic moving at classification ratings within official territory (including Illinois territory) should be increased [illegible] percent as maxima, in the manner specified in the report, and as so increased the class-rate scales will be just and reasonable; this finding is based in part upon the finding that the revenue needs of the carriers in official territory with respect to their class-rate traffic are greater than is the case as to class-rate traffic of the carriers in the other territories described.

3. The present minimum charge per shipment on less-than-carload shipments moving at class rates in the territory included in No. 28300, is less than a just and reasonable minimum charge to the extent that it is less than

75 cents; and 75 cents is a just and reasonable minimum charge on such shipments.

B. L. Smelker for Interstate Commerce Commission.

REPORT OF THE COMMISSION

BY THE COMMISSION:

We have had the benefit of oral argument. Statements of matters of fact in this report are to be considered as findings by us, except when it is clear that we are merely reciting issues raised or contentions made by the parties, or are summarizing evidence adduced.

Two proceedings, allied, and heard and submitted together, are embraced in this report. Both are investigations on our own motion instituted by our orders of July 29, 1939, as modified August 1, 1940. No. 28310 is an investigation of the lawfulness of the description of articles, carload minimum weights, and ratings provided in the consolidated freight classification, containing the ratings on articles so described in official, Illinois, southern, and western classifications, applicable to the transportation of property in interstate or foreign commerce by common carriers by railroad or water, or partly by railroad and partly by water, subject to the Interstate Commerce Act. Its territorial scope is the entire United States. All common carriers engaged in the transportation described above were made respondents.

Docket No. 28300, Class Rate Investigation, 1939, concerns the lawfulness of interstate class rates,[1] all-rail, all-water, and rail-and-water, applicable in the United States generally, except in mountain-Pacific territory and between that territory and the remainder of the country. As modified by order of August 1, 1940, it includes all rates determined by ratings in the four classifications named above, irrespective or whether the ratings are stated under the regular numbered or lettered classes or as percentages of first class, but none other. It does not embrace exceptions to the classifications.

The two complementary related investigations were heard simultaneously before division 2 of the Commission, to which the proceedings were assigned for administrative handling, at St. Louis, Mo., on July 10 and 11, 1941, Indianapolis, Ind., September 22 to October 1, 1942, Columbus, Ohio, November 16 to 27, 1942, and Washington, D. C., March 29 to April 1, 1943. All the States were notified of the pendency of the proceeding. In accordance with section 13 (3) of the act, we sought the cooperation of the State commissions. Their committee, consisting of Commissioners McConnaughey of Ohio, Scott of South Carolina, and Murphy of South Dakota, sat with division 2 througout the St. Louis, Indianapolis, and Columbus hearings, and the two commissioners first named with Commissioner Doherty of South Dakota sat with the division at the Washington hearing and with us at the oral argument, which was held at Washington, June 14 to 23, inclusive, 1944. A very large number of briefs were submitted. A proposed report in No. 28310 was served upon the parties. Numerous exceptions and replies filed have been considered. No proposed report was served in No. 28300.

---

[1] Rates are stated in this report in cents per 100 pounds.

Because of the magnitude and complexity of the issues in these proceedings, certain steps preliminary to the commencement of hearings were taken by division 2. On January 9, 1940, a notice was issued to the parties and to the public, stating the broad objectives of the investigations, listing some, but not all, subjects to be explored, and suggesting the assembling and compiling of data pertinent to the issues. Among the subjects named for consideration was whether the establishment throughout the United States of a rail and water freight classification, simplified and uniform, or more nearly uniform when compared with the existing classifications, would be lawful and practicable. The notice was accompanied by an order in both proceedings requiring respondents to compile and furnish information concerning traffic moved on specified days in 1939, and an order in docket No. 28310 requiring respondents to compile and furnish specified information relating to the classification of freight. These orders were subsequently vacated, the latter because respondents agreed to furnish the information required without an order, and the former because of the difficulty under conditions then existing owing to the national emergency, and the expense and delay in obtaining and compiling the information sought. The public was informed that certain studies to be prepared by our staff would be offered in evidence at subsequent hearings by qualified witnesses.

A prehearing conference, attended by upwards of 400 persons, was held in Chicago, Ill., on October 28 and 29, 1940. The purpose thereof was to develop more clearly the matters in issue, the particular phases of the general subjects designated in the orders of investigation to be first explored, and to give direction to the studies and research of the interested parties. All persons attending were afforded an opportunity to be heard and to discuss the matters considered. The general opinion of the conference was that the order requiring the compilation of traffic data should be rescinded, and, as stated, that was done by order of November 25, 1940.

Certain studies prepared by our staff were made available to the parties and the public prior to and during the course of the hearings, and were received in evidence.

Numerous petitions were filed by respondents and other interests seeking the discontinuance or indefinite postponement of these proceedings until after the emergency caused by the war. They were all denied. The State of Ohio moved that those petitions be reconsidered and sustained; and the Wisconsin commission and Wisconsin Manufacturers' Association referred to their concurrence in the petitions and reiterated their opinion that the investigations should be discontinued or postponed until after the war. The motion is overruled.

We will report first upon the issues raised with respect to classification in No. 28310, although it is impossible to consider such issues as wholly distinct from intermingled issues raised in the related class rate proceeding, No. 28300. The following, therefore, will constitute Part I of the general report in both proceedings.

Part I

CLASSIFICATION OF FREIGHT

Each of the three major classifications, official, southern, and western, has both intraterritorial and interterritorial application. They contain rules and other provisions relevant to traffic generally, and set forth the ratings for ascertainment of class rates, wherever such traffic and rates are made subject to the respective classifications by specific reference thereto in the rate tariffs. Usually the tariffs are subject also to publications, entitled exceptions to a particular classification, which contain rules, provisions, and ratings more liberal to shippers than, and take precedence over, the classification. Many of them apply throughout an entire classification territory. In addition, there are often commodity rates that take precedence over both the classifications and exceptions as to particular articles.

Illinois classification is used in the border area between official and western classification territories. It has rather limited interstate application and none as to interterritorial traffic. At present it governs, besides Illinois intrastate traffic, the class rates between Illinois and points in the Indiana portion of the Chicago switching district, and traffic between Illinois points traversing routes partly in Indiana on which it authorizes charges over intrastate routes between the same Illinois points lower than what the corresponding charges would be at interstate rates governed by official classification.

Intraterritorial application.—The boundaries of the territories within which the respective classifications have intraterritorial application are roughly sketched on the map of the United States, appendix 1 to this report.

Official classification applies between all points in the part of the country known as official territory, which may be described as lying generally east of the following line: Lake Michigan, including west-bank car-ferry ports on official-territory traffic, south to Milwaukee, Wis., thence the line of the Chicago, Milwaukee, St. Paul & Pacific Railway (the Milwaukee) to Rugby Junction, Wis., thence the line of the Minneapolis, St. Paul & Sault Ste. Marie Railway to Duplainville, Wis., thence the line of the Milwaukee through Watertown to Madison, Wis., thence the line of the Chicago & North Western Railway to Dodgeville, Wis., thence the line of the Illinois Central Railroad to the Illinois State line and west along the latter to the Mississippi River, thence south along that river, including west-bank crossing points on official-territory traffic, to the Ohio River; and lying generally north of the following line: The Ohio River east from its mouth, including south-bank crossing points on official-territory traffic, to Cincinnati, Ohio, thence east on the line of the Chesapeake & Ohio Railway to Kenova, W. Va., thence on the main line of the Norfolk & Western Railway to its crossing with the line of the Virginian Railway west of Roanoke, Va., thence on the Virginian Railway to Suffolk, Va., thence on the main line of the Norfolk & Western to Norfolk, Va., including also all lines of the Chesapeake & Ohio Railway in Kentucky and all lines of the Norfolk & Western Railway except those extending south from Roanoke, Va., to Winston-Salem, N. C., and from Brookneal, Va., to Durham, N. C. This territory, sometimes referred to as official-Illinois territories, embraces New England, trunk-line, central, and Illinois traffic territories, and comprises roughly 14 percent of the land area of continental United States, excluding Alaska, which may for brevity be termed "the country."

Southern classification applies between all points in the part of the United States, called southern territory, which contains about 13 percent of the country's land area, lying south of official territory and east of the Mississippi River, including north-bank Ohio River and west-bank Mississippi River crossing points on southern territory traffic.

Western classification applies between all points in the part of the United States, termed western territory, lying west of official and southern territories, including east-bank Mississippi River points on western territory traffic. It encompasses western trunk-line, southwestern, and mountain-Pacific rate territories, and approximately 73 percent of the land area of the country.

Interterritorial application.—In the several comprehensive class-rate investigations made over a number of years, we have prescribed which of the classifications should govern the interterritorial rates required between the rate territories lying roughly east of the Rocky Mountains, and, on complaints, to some extent from west thereof. However, long before those proceedings the carriers of necessity had subjected to one or the other classification the many interterritorial single-factor rates they had voluntarily established. Without attempting the detailing of extraordinary situations, the present interterritorial applications of the classifications are in general as follows, which applications are graphically portrayed on appendix 1 to this report:

Official classification governs class rates from western trunk-line territory, including the Northwest,[2] Wyoming, Utah common points, and intermediate Utah stations east of those points, to official territory east of Illinois; from official territory east of Illinois to the Northwest; and between official territory and certain points on the Chesapeake & Ohio and Norfolk & Western railways in northeastern Kentucky and southwestern Virginia.

Southern classification governs class rates between official territory, including west-bank Lake Michigan ports, and southern territory, except as to the Kentucky and Virginia points noted above in connection with official classification; and from western trunk-line territory, including the Northwest and southern Missouri, to southern territory.

Western classification governs all through class rates between mountain-Pacific territory, including transcontinental traffic, and official and southern territories, except from Wyoming and Utah as stated above in discussing official classification; from official territory to western trunk-line territory, except the Northwest; between southern Missouri and official territory; from southern territory to western trunk-line territory, including the Northwest and southern Missouri; from western trunk-line territory to Illinois territory, which comprises Illinois and southeastern Wisconsin embraced in official territory; and between southwestern territory and official and southern territories.

Owing to the differences, often substantial, measured by relations to corresponding first-class rates in the particular territories, caused by the varying ratings in the respective classifications, difficult situations occur from subjecting interterritorial class rates to a classification other than that applicable within one of the territories involved. Sometimes a classification determines the rates applying over direct routes passing through all three classification territories, adding to the difficulties. Where a classification has been prescribed on the destination-territory principle later described, different rates result in opposite directions between the same points, and over the same routes, on classes that do not bear like percentage relations to the corresponding first-class rates in the two territories concerned.

---

[2] The term "Northwest" is the designation used herein for that part of western trunk-line territory on and east of the Northern Pacific Railway from Duluth to Hinckley, Minn., thence the Great Northern Railway to Twin Cities, Minn., thence east of the Mississippi River but including west-bank crossing points. It thus includes a narrow strip of Minnesota, Wisconsin except a part in Illinois territory, and the Upper Peninsula of Michigan.

EFFORTS TO PROMOTE UNIFICATION OF CLASSIFICATIONS

Beginning with the year 1887, and continuing to the present time, we have endeavored to promote the unification of freight classifications throughout the United States. Efforts during the first 25 years are narrated in some detail in *Western Classification Case* (1912), 25 I. C. C. 442, 459. In that report we spoke of the multiplicity of varying classifications then prevailing, and condemned them as a public evil that caused confusion and constant embarrassment in the interchange of freight between railroads. As there stated, we, in our first annual report (1887) to the Congress, commended the work of the railroads in reducing the great number of classifications then in effect,[3] characterizing it to be "extremely important and useful," but emphasized the necessity of a single classification for the entire country. The importance and practical necessity of uniformity were reiterated in succeeding annual reports. The desirability of a uniform classification has been urged repeatedly by State railroad commissioners at their annual conventions, by shippers' organizations, and by some railroad officials. Always we have been concerned with the just complaints from shippers against disadvantages they suffered because of inconsistencies and divergencies in classifications.

Although we insistently pressed and encouraged unification in every way possible, and made suggestions toward that end, throughout the years reviewed in the above report (25 I. C. C. 442), we adhered to the opinion that the actual work of unification could be undertaken best by the carriers themselves. We recognized fully the great difficulties to be overcome, but declared that they are not insurmountable to carriers' specialists of long experience in work of this sort, and that unification is practicable. Cognizance was taken of the obvious fact that the merging of ratings would necessitate mutual concessions from shippers and carriers, in that the effect must be to lower the ratings on some articles of commerce, and to increase them upon others. Opposition was expected from interests that would be unfavorably affected.

Continuing in *Western Classification Case, supra*, we said that during the years prior to 1888 "the movement toward uniformity seemed to give promise for the establishment of a single classification for the entire country"; but that in the fifth annual report (1891) we recorded the failure of the carriers to adopt the uniform classification proposed by their committee in 1890, and recommended to the Congress the passage of an act "requiring the adoption within one year from the date of its passage of a uniform classification of freight by the carriers subject to the act."[4] Much additional history was recited, embracing pertinent quotations from a number of annual reports, detailing our persistent endeavor to promote uniformity.

---

[3] Individual railroads would have two or more classifications in effect: One for local traffic in one direction, one for through traffic in one direction and another for that in the opposite direction, and a fourth, perhaps, for traffic from or to a particular section of the country. One railroad had nine different classifications in effect in 1883 for traffic originating on its line.

Until the *Consolidated Classification Case* (1919), 54 I. C. C. 1, official, southern, and western classifications were published as separate issues, each with its individual set of rules, descriptions of articles, and ratings. In that report we again adverted to our annual reports to the Congress mentioning our efforts to stimulate the work in the direction of greater uniformity in freight classifications. In view of the progress made, it had been apparent early in 1918 that a complete unification of the rules and descriptions of articles in the three major classifications was possible at a not distant date, and we "inquired of the carriers why they could not by January 1, 1919, or sooner, effect a consolidation of the three general classifications into one volume containing one set of uniform commodity descriptions with three rating columns, one for each territory, subtended, and with one set of rules."

This occurred during World War I and the period of Federal control of the principal railroad lines of the country by the United States Railroad Administration, whose director of traffic appointed a small committee, of which our classification agent became a member, to carry out the work. That committee submitted a "Proposed Consolidated Freight Classification No. 1" in one volume, which accomplished the consolidation and uniformity to the extent suggested by us, and in addition contained many proposed changes in the ratings. Upon request of the Director General of Railroads for recommendations as to the advisability of adopting the proposed classification for application by the carriers under Federal control, *Consolidated Classification Case*, *supra*, was instituted to inquire into the reasonableness and propriety of that classification, and all carriers subject to the act, not under Federal control, were made respondents.

We said in the report last cited, on page 3:

> The consolidated classification is the result of effort toward uniformity extending over a long term of years, and since uniform rules and descriptions are necessary before uniformity in ratings is possible, it marks an important step toward a uniform classification.

---

[4] That recommendation, repeated in subsequent annual reports, was not adopted. Amendments of the act, sections 1 and 15, June 18, 1910, first inserted in terms a requirement for the maintenance of lawful classifications of freight by the carriers.

With regard to the ratings in the proposed classification we said, page 4:

> There was no concerted effort [by the carriers' committee] to make the ratings uniform, but the desirability of uniformity seems to have been kept in mind, * * *.

At page 9 we stated:

> The fact that a uniform classification would be a convenience is a consideration of relatively minor importance; we have advocated uniformity because it is an essential part of the general scheme which contemplates greater consistency in rate making and elimination of discriminations and inequalities. * * * In large part different ratings in the three territories are not due to actual or substantial differences in circumstances and conditions, but are the result of mere differences of opinion and the natural inclination of traffic officials to give expression to their respective theories of classification.

Although no recommendation was made regarding ratings, we tentatively suggested a 10 class (for first class and lower) classification for the entire country, and the percentage relations for the 10 numbered classes in rate scales.[8] The opinion was expressed, at page 11, that "an absolutely uniform classification could be prepared and proposed only in connection with a universal system of rate scales having a uniform number of classes."

The general conclusions reached in that proceeding, page 71, were that:

> So far as rules, descriptions, packing specifications, and [carload] minimum and estimated weights are concerned, and subject to the modifications thereof indicated in this report, we recommend the adoption of the consolidated classification for application in lieu of the present official, southern, and western classifications by carriers under federal control. We do not recommend any changed ratings except as the establishment of new items may indirectly effect changes, and such as may be a reasonably necessary part of the establishment of uniform descriptions, specifications, or minimum weights.
>
> The same rules, descriptions, packing specifications, and minimum and estimated weights subject to the same modifications and limitations are, tentatively, and without prejudice, found just and reasonable for carriers not under federal control.

The new consolidated classification, conforming generally to our recommendations, was published by the carriers and became effective December 30, 1919.

Uniformity was also recommended by us to the Director General of Railroads, responsive to his request for advice, in *Illinois Classification* (1919), 55 I. C. C. 290, as to the rules, and items of description of articles, packing specifications, and carload minimum and estimated

---

[8] The classes and percentages tentatively suggested were as follows:

Classes	1	2	3	4	5	6	7	8	9	10
Percentages	100	85	70	60	45	35	30	25	22½	20

weights, of the Illinois classification[6] to correspond with those approved, as modified, in *Consolidated Classification Case, supra.* After conferences between the shippers and carriers, in which we and the Public Utilities Commission of Illinois participated, the separately published Illinois classification was revised, not only as to the rules and article descriptive items along the line of the consolidated classification, but also as to ratings. In most instances, the same ratings as in official classification were established, except when the competition encountered by the Illinois shippers came from western territory, in which event the western classification rating was adopted. (Thirty-fourth annual report of the Commission, 1920, page 40.) The Illinois classification was merged in the consolidated classification, effective November 15, 1933.

In annual reports to the Congress subsequent to the establishment of the consolidated classification we frequently commented upon the matter of uniformity, sometimes commending the carriers for the progress made, often giving the number of changes and occasionally specifying the degree of uniformity accomplished[7] and sometimes remarking that the progress has been slow, but always indicating our desire for completion of the task within a reasonable time. The showing of official, southern, and western classification ratings in parallel columns of the consolidated classification was noted as serving in striking fashion to bring inconsistencies to the attention of shippers and carriers, and as being a strong influence toward uniformity.

Once we suggested to carriers the advisability of proceeding more slowly just at that time with respect to unifying ratings that would cause large rate increases, because of the coinciding general increase of 1920 in rate levels by substantial percentages, but said that any changes made should be toward uniformity. Carriers heeded the suggestion. After the general rate reduction of 1922, we remarked upon the accelerated pace in unifying ratings, even though some changes meant only the merging of ratings as to two of the classifications. Also in the 1923 annual report we spoke approvingly of the establishment of less-than-carload and carload ratings in lieu of any-quantity ratings, especially in southern classification, which was characterized as having been an any-quantity classification in the past.

---

[6] The Illinois classification governed tariffs making reference thereto, and at that time applied generally to traffic between points in Illinois, and between Illinois and points on west bank of the Mississippi River in Iowa and Missouri, in southeastern Wisconsin, and in Indiana on interstate routes between Illinois stations.

[7] Unification achieved of any-quantity and less-than-carload ratings combined in the three classifications, beginning with the establishment of the consolidated classification in 1919, was given in the fifty-first annual report (1937) as follows: Year 1919, 31.3 percent; 1922, 39.01 percent; 1927, 42.0 percent; 1932, 59.13 percent; and 1937, 86.0 percent. Nonuniformity of such ratings as to all three classifications was 14.7, 12.05, 11.0, 6.15, and 2.2 percent, respectively. The percentage last stated represented only 204 of the 9,251 ratings.

Reference was made in the thirty-ninth annual report (1925) to the prescription for the first time of uniform percentage relations for the former 10 classes, and the 2 additional classes created by us, in *Southern Class Rate Investigation* (1925), 100 I. C. C. 513, for class rates applicable throughout southern territory and between that and official territory. In the forty-first annual report (1927) reference was made to the fact that similar action had been taken in *Consolidated Southwestern Cases* (1927), 123 I. C. C. 203, as to the usual 10 classes, governed by western classification, prescribed for application throughout southwestern territory and between that and the territories north and east thereof extending to the entire Atlantic seaboard. The percentages prescribed for the upper classes in the latter proceeding were the same as those in the former, permitting unification of ratings in western and southern classifications, particularly for less than carloads, and correction of numerous cases of undue prejudice and preference on traffic between the South and Southwest or in either of the competitive channels on the east and west banks of the Mississippi River, which divides those territories; but the issues in the latter proceeding, and the difference in the number of classes, prevented uniform percentage relations for the lower classes.

In our forty-third annual report (1929) we mentioned pending complaints from North Carolina and Kentucky as to interterritorial rates, due to the location of those States immediately south of official territory where a classification prevailed differing radically from that in southern territory. The opinion was expressed that the comprehensive class-rate revisions in various parts of the country in process then and in the preceding few years would improve the situation, "but eventually it may be necessary to give it further attention and to consider even the advisability of bringing about substantially complete uniformity in classification throughout the country."

The filing of tariffs, effective December 3, 1931, pursuant to *Western Trunk Line Class Rates*, 164 I. C. C. 1, and *Eastern Class Rate Investigation*, 164 I. C. C., 314, was recorded in the forty-fifth annual report (1931). The former decision prescribed class rates within western trunk-line territory and between that and official territory, and the latter between all points within official territory including Illinois. It was stated in the annual report, page 66, that the rates prescribed for the various classes in official territory would, for the first time, bear a fixed relation to each other. It was further stated, at page 67, that:

> Further study of the subject of classification uniformity and the experience which we have gained in recent years in fixing class rates make it increasingly apparent that, while complete unification and merger of the Southern and Western Classifications is possible, such unification cannot be fully extended to embrace

> the Official Classification unless and until there is a closer alignment of the basic rate structures, as between official territory and the other sections of the country, than it has so far been found practicable to accomplish, although revisions heretofore required by us have been in that direction.

In many reports we have reiterated our stand for unification of ratings in the diverse classifications. Illustrative are decisions requiring revisions of class rates throughout extensive classification territories, adjoining others with greatly varying ratings, as well as class rates for interterritorial application, usually for the first time displacing former combinations containing, as factors, territorial rates subject to different classifications. In each proceeding it was necessary, of course, to decide upon a single classification to govern interterritorial through rates. This presented a difficult problem arising from the fact that whichever classification was prescribed would conflict sharply, or in some measure, with the classification applicable in one of the territories affected.

In one of these reports, *Southern Class Rate Investigation*, *supra*, after discussing difficulties in determining interterritorial rates, especially to and from border zones embracing North Carolina and Kentucky, it was stated, at page 667, that:

> until materially greater progress has been made towards harmonizing the radically different rates and classifications applied within official and southern territories, respectively, complications in the interterritorial adjustments will be inevitable.

In *Consolidated Southwestern Cases*, *supra*, where western classification was decided upon to govern class rates between the Southwest and western trunk-line, southern, and official territories, we said, at page 398:

> For years we have endeavored to promote uniformity in classifications. Except for unification of rules and commodity descriptions, the progress in that direction has not been encouraging. * * * So long as vital differences in classification exist it is impossible to bring about uniform class percentages throughout the country, but, on the other hand, until the class percentages are made more nearly uniform, progress toward uniform classification is impeded. We believe that in every such general proceeding as the present, such progress toward uniformity in this direction should be made as is possible.

In another proceeding of this character, *Western Trunk-Line Class Rates*, *supra*, it was declared, at page 217, that:

> This record further demonstrates the need for uniform classification ratings throughout the country. One of the beneficial results of these extensive investigations, in which joint interterritorial class rates governed by one classification are prescribed between major rate territories within each of which different classifications exist, should be the hastening of the much-desired uniformity of ratings.

Western classification had been prescribed in the original report in *Western Trunk Line Class Rates*, *supra*, to govern interterritorial class rates in both directions between western trunk-line and official territories. In the sixth supplemental report in that proceeding (1934), 204 I. C. C. 595, for the first time we found necessary the prescription of the governing classification according to the classification applicable in the destination territory, in order to remove relative unreasonableness and undue prejudice as to the east-bound rates generally, which thus became subject to official classification. It had been found that "Unquestionably the ratings in official are on the whole more favorable from the shippers' viewpoint than those in western." (See page 671.)

On reconsideration of the original report in *Western-Southern Class Rates* (1938), 226 I. C. C. 497, in which the destination-territory classification principle was adhered to for governing class rates between western trunk-line, including southern Missouri, and southern territories, we held in the second supplemental report (1939), 232 I. C. C. 81, that "Difficulties and inconsistencies in applying this finding such as respondents adduce will inhere in any interterritorial class-rate structure so long as the classification ratings are not uniform in the different territories."

Our efforts to bring about unification were instrumental in obtaining the unification of the rules and description of articles. In later years the necessary prescription of single classifications to govern the interterritorial through class rates, required in the comprehensive proceedings cited above, has been a compelling force in bringing about the present comparatively high degree of uniformity of ratings in the three classifications, or at least merging in two of the three.

ANALYSIS OF CONSOLIDATED CLASSIFICATION

The consolidated freight classification comprises official, Illinois, southern, and western classifications, which govern tariffs making reference to them. It contains descriptions of all articles of commerce, including kind of shipping container or nature of packages contemplated by the ratings, and rules and packing descriptions, that are uniform in all the classifications. Opposite the descriptions of articles are shown in three parallel columns the less-than-carload ratings, carload minimum weights or indication of any-quantity, and carload ratings, respectively. Where specified as "AQ", or any quantity, the rating is duplicated in the two rating columns. Where the rating is uniform in all classifications, a single figure appears in the respective rating column; otherwise three ratings are set forth for official, including Illinois, southern, and western classifications, respectively, unless the Illinois classification rating differs from that in official, in which instance four ratings are stated, of which the second is for Illinois classification and the third and fourth for southern and western.[8] Numbers in rating columns higher than 12 (except R26, meaning rule 26, and rates stated in cents per car-mile on railway cars) represent percentages of class 100,[9] published in the class-rate tariffs.

Ratings often vary on a given article for certain reasons, such as the manner of packing or whether the article is set up or knocked down. Many articles have more than one carload rating, depending upon different minimum weights. Numerous carload minima are subject to a rule (rule 34) requiring the computation of freight charges on a higher minimum when the car used exceeds the length specified for the minimum appearing opposite the article descriptive item. Practically all articles have both less-than-carload and carload ratings. In comparatively rare instances, one or all classifications will not provide ratings on articles, but will show that they are subject to the rates of individual carriers, or are not taken, or the rating is stated for one or two classifications only. As to one small category, railway cars moving on their own wheels, the classifications name rates in cents per car-mile instead of giving ratings.

Illinois classification ratings are the same as official on the bulk of the items. The remaining ratings are mostly the same as western, but sometimes the same as southern, and occasionally they are higher or lower than in either of the three major classifications. It is said that the rating on a given article published in Illinois classification is adopted from the classification applicable in the territory from which Illinois shippers encounter their principal competition. Discussion of Illinois classification in the same detail as regarding the other classifications seems unnecessary, inasmuch as the former now governs comparatively little interstate traffic, and whatever is said or done with respect to the others apparently will be pertinent to and dispose of this classification.

While each classification contains numerous ratings which are set forth in percentages of class 100, many being the same as those prescribed by us for so-called regular classes, the classifications do not specify any percentage relations for the regular numbered and lettered classes, but many tariffs do publish them. Such percentages were prescribed by us in the eastern revision for rates governed by official classification; in the southern revision for rates governed by southern classification, in the western trunk-line and southwestern revisions for rates governed by western classification, except in mountain-Pacific territory and on transcontinental traffic. As to mountain-Pacific territory, although there are important exceptions, the percentages generally reflected in the class rates are those which appeared as the relations in the rates required in *Portland Chamber of Commerce* v. *Oregon R. & Nav. Co.* (1911), 21 I. C. C. 640. They were followed in subsequent reports involving rates in all parts of that territory, including *Utah Shippers Traffic Assn.* v. *Atchison, T. & S. F. Ry. Co.* (1931), 172 I. C. C. 306, 311, in which the class-rate scale was extended to 1,500 miles. No consistency exists in the relations between class rates applicable on transcontinental traffic, which are subject to western classification. Class rates governed by Illinois classification have percentage relations not prescribed by us.

---

[8] These single figures, or the figures for the respective classification where the ratings are different, will be sometimes termed "sets" in this report.

[9] Class 100 is the term generally used in this report for first class, as explained later.

Articles are classified in official, Illinois, southern, and western classifications, respectively, into 7, 12 (or 11 since classes 6 and C are same percentage of first class), 12, and 10 regular numbered or lettered classes. In addition, there are 7 classes, namely, 1¼, 1½, 1¾, 2, 2½, 3 and 4 times class 100 rates. The regular class designations and their percentage relations to class 100 reflected in the rates in tariffs applicable in the respective rate territories are stated in the following table:

Percent of class 100	Regular class designation				
	Official	Illinois	Southern	Western	
				Western trunk line and Southwestern territories	Mountain-Pacific territory
100	1	1	1	1	1
85	2	2	2	2	2
70	3	3	3	3	3
60					4
55	R26[1]	R26	4	4	
50	4	4			5, A
45			5	A	
40		A	6		B
37½				5	
35	5	5	7		
32½		B		B	
30			8	C	C
27½	6	6, C			
25			9		D
22½		D	10	D	
20		E	11		E
17½			12	E	

[1] Formerly official classification provided rule 26 ratings, for which 70 percent of class 100 was prescribed in the eastern revision. It has been replaced by class 3 in the classification, although it may still appear in some tariffs.

Besides the classes described above, there are in official, southern, and western classifications, respectively, 16, 14, and 12 classes that are stated in percentages of class 100, of which 3, 5, and 3 classes are the same equivalents of class 100 rates as are certain regular classes in the particular classification. Only one of them, 1½ percent, which provides a rating on one article descriptive item in less than carloads, is above class 100 in each classification, and those below range from 77½ to 20 percent.

The total of all classes, namely, those above class 100, regular (numbered and lettered), and percentage, in official, southern, and western classifications, are 27, 28, and 26, respectively, counting as one equivalent regular and percentage classes; and the full range of all classes in each classification is from 17½ to 400, except that in official the lowest is class 20.

In order to avoid possible confusion and misunderstanding, all classes, however stated in the classifications, will be denoted generally in this report by percentages of class 100, and class 100 may be taken as equivalent to class 1 or first class, as those terms are used in the current classification. Unless otherwise indicated, the official, southern, and western class-rate percentages hereinafter mentioned will be understood to mean those prescribed in the eastern, southern, and western revisions, respectively.

The following facts are found from study of an exhaustive analysis in the record of the consolidated classification as in effect on August 3, 1942.

The sets of ratings on article descriptive items and subitems on which all, or at least one, of the three major classifications provide ratings aggregated 20,915, of which 83 were any-quantity (counting duplicate ratings in less than carloads and carload columns in the classification as one), 10,151 less-than-carload ratings, and 10,682 carload ratings (including 273 tank-car ratings). Of the aggregate, 4,077 ratings were stated as percentages of class 100 rates. The number of different kinds of combinations of ratings found in these sets, consisting of regular class and class-and-percentage ratings, both uniform and nonuniform, and appearing in the three classifications is 16 for any quantity, 80 for less than carloads, and 288 for carloads including tank-car ratings. In addition, there were 11 items of railway cars moving on their own wheels on which rates were named in cents per car-mile instead of ratings. Appendix 4 to this report sets forth the any-quantity and less-than-carload ratings as distributed among the classes in the respective classifications, and appendix 5 the carload ratings (including the tank-car ratings).

As would be expected, ratings in excess of class 100 are used almost entirely for any quantity and less than carloads. They account for approximately 16 percent of the former, somewhat less than 10 percent of the latter, and only about 0.23 percent of the carload ratings.

Omitting the article items and subitems on which any one of the three major classifications fails to provide a rating, the following table shows the degree of uniformity existing in ratings, and the

xtent to which the ratings in two classifications are alike, or unlike
a any two:

	Any quantity		Less than carloads		Carloads		Grand totals	
	Number of ratings	Percent	Number of ratings	Percent	Number of ratings	Percent	Number of ratings	Percent
tals	80	100.00	10,134	100.00	10,664	100.00	20,878	100.00
iform in the 3 classifications	64	80.00	8,622	85.08	3,868	36.27	12,554	60.13
ke in—								
Official and southern	67	83.75	9,343	92.18	5,114	47.96	14,524	69.57
Official and western	76	95.00	8,876	87.59	4,522	42.40	13,474	64.53
Southern and western	64	80.00	8,822	87.05	6,320	59.27	15,206	72.83
like in any 2 classifications	1	1.25	337	3.32	2,444	22.92	2,782	13.33

Uniformity is greatest in the less-than-carload ratings, and least in
e carload ratings. The percentages of unlikeness are extremely
nall, except as to carloads. A slight retrogression occurred in the
ombined any-quantity and less-than-carload ratings since 1937, at
hich time our annual report stated the uniformity as 86 percent,
hereas it is now 85 percent; and a progression of unlikeness from
2 percent to 3.3 percent. That report does not contain correspond-
g figures for carload ratings, which are now only 36 percent uniform
d 23 percent unlike in any two classifications.

On article descriptive items provided in each classification with
tings, any-quantity ratings in the 3 classifications range from
asses 50 to 300, less-than-carloads from classes 30 to 400, and carloads
om classes 17½ to 200. Although these ranges embrace quite a
umber of classes, including regular and percentage, the bulk of the
ticle items are concentrated in comparatively few. The less-than-
rload ratings in official and southern are distributed among 16
asses each, but 89.65 and 85.96 percent, respectively, of the items
e in 5 classes (100, 85, 70, 55, and 50); while in western they are
und in 12 classes, but 90.13 percent are in 4 classes (100, 85, 70, and
). Carload ratings are more widely scattered, in official among 21
asses, but 72.82 percent of the items are in 5 classes (70, 55, 40, and
), and 98.28 percent are in 10 classes (additions, 100, 85, 45, 37½,
d 27½); in southern, among 23 classes, but 74.34 percent of the
ems are in 4 classes (70, 55, 45, and 40), and 91.45 percent are in 8
asses (additions, 100, 85, 35, and 30); and in western among 21
asses, but 81.52 percent of the items are in 4 classes (70, 55, 45, and
½), and 95.45 percent are in 8 classes (additions, 100, 85, 32½, and
)..

Despite the relatively high degree of uniformity in any-quantity
d less-than-carload ratings, substantial disparities exist on indi

vidual article items as indicated in appendix 4 to this report. Thus, on certain items, on which the ratings are stated for any quantity, southern classification is never higher than either official or western, but has one rating of class 55 for which the two others name class 100, whereas official and western are alike in all but one such rating. As to less-than-carload, on items rated class 50 in official the ratings in southern range from classes 30 to 70, and in western from classes 55 to 85; on items rated class 70 in southern the ratings range from classes 50 to 100 in official, and from classes 55 to 85 in western; and on items rated class 55 in western the ratings range from classes 40 to 100 in official, and from classes 30 to 100 in southern.

Still greater variations, relatively, are presented in the carload ratings, set out in appendix 5, of which the following are examples; on items rated class 35 in official, the ratings in southern and western both range from classes 17½ to 55; on items rated class 40 in southern, the ratings in official range from classes 27½ to 70, and in western, from classes 17½ to 40; and on items rated class 45 in western, the ratings in official range from classes 27½ to 85, and in southern, from classes 30 to 55.

All proponents of a change from one classification to another advocated adoption of the official classification as the basis. That classification, from the shippers' standpoint, is regarded as more favorable than the two others on traffic that is moving under class rates. Mathematically, there is little difference on the whole, in that the weighted general averages of the percentage relations to class 100 of all ratings in the respective classifications fall within less than one percentage point, being 67.91, 67.82, and 68.70 percent for official, southern, and western. Broken down by character of ratings, official, southern, and western average percentages of class 100 are, respectively: Any quantity, 112.81, 108.69, and 112.81; less-than-carloads, 87.02, 85.95, and 87.21; and carloads, 49.40, 50.26, and 50.75.

The following table shows total ratings, grouped according to percentages in official classification, and the extent to which the corresponding ratings in southern and western classifications are like, or higher or lower than, those in official, as in effect August 3, 1942. As stated, distribution according to percentages of class 100 in southern and western classifications is shown in appendixes 4 and 5 to this report.

Official classification			Corresponding ratings in—					
Percentage of class 100	Ratings		Southern			Western

[1] Abbreviations: aq., any quantity; l. c. l., less than carload; c. l., carload.

[2] Here the total number of less-than-carload and carload ratings are 5 and 16, respectively, less than stated in the preceding table. Both tables were compiled from the same exhibit, but from different parts thereof.

Compared with official classification, no any-quantity rating in southern is higher, and in western only 3 are in higher; and those lower are 13 and 1, respectively. A similar situation exists as to less-than-carloads, where out of 10,129 ratings only 18 in southern, but 1,035 in western, are higher than in official, whereas 776 and 219, respectively, are lower. As to carloads, it is different in this regard, in that out of 10,648 ratings, 4,157 in southern and 5,107 in western are higher than in official, and 1,376 and 1,019, respectively, are lower.

Many incongruities apear among the ratings. Thus, out of more than 10,000 sets of less-than-carload ratings, 1 item is rated in the 3 classifications class 110, which is not a regular class; 13 items are rated in official class 60, not a regular class, but are assigned to either regular classes 70 or 55 in southern and western; and a single item is rated class 57 in official, which is not a regular class and only 2 percentage points above class 55 wherein it is placed in southern and western. As to carloads, many item ratings in each classification are not regular. For example, official has 2 in class 75, 6 in class 65, 3 in class 60, 7 in class 32½, and 1 in class 20; southern has 24 in class 77½, 4 in class 75, 11 in class 65, and 6 in class 60; and western has 24 in class 77½, 2 in class 75, 11 in class 65, 1 in class 60, 1 in class 42½, and 8 in class 35. Few of the more than 10,000 carload items are assigned in southern classification to regular classes 25, 20, and 17½,[10] or 48, 37, and 86 ratings, respectively.

There is no consistency in the assignment of ratings on the same article as between less-than-carloads and carloads. A few examples of the inconsistencies are: On an article descriptive item one classification will provide the same rating for less-than-carloads as for carloads, but in the others the rating for the former is higher than the latter; the same uniform rating in the three classifications will be shown for both less-than-carloads and carloads, and a carload minimum weight will be specified which, in effect, results in any-quantity ratings, but the ratings are not listed as any quantity; and a uniform carload rating and minimum weight will be stated for a number of items, indicating to some extent similar transportation characteristics of the articles embraced, but the variations in less-than-carload ratings are, for example, from class 55 to class 100, and from class 70 to class 250. Although the less-than-carload and carload ratings are the same on many items, on the great majority of them the former are higher than the latter, and often extremely wide spreads occur, counting regular ratings. For example, in southern and western classifications the spreads are from class 17½ to class 100, or of 11 and 9 classes, respectively, meaning that the less-than-carload ratings are 471 percent higher than carload ratings. If grouped according to number of classes represented by the spreads, probably the largest group would be that of spreads of 2 regular classes.

RATE EFFECT OF CLASSIFICATION DIFFERENCES

In our report in *Eastern Class-Rate Investigation*, *supra*, at pages 372–373, we undertook as a part of the comprehensive revision of class rates there made, to "introduce a proper degree of flexibility into the tructure" of the class-rate tariffs. After discussing efforts to obtain his result in other proceedings, and the utility of a greater number f percentage columns related to first-class rates (and thereby automatically related to all the classification ratings) we made a finding s to the percentage relations of the columns of rates to the first-class ates. As amended in our supplemental report in that proceeding, 71 I. C. C. 481, 499, the finding reads as follows:

---

[10] In the southern revision we prescribed these for regular classes 9, 11, and 12 respectively.

> 1. We find that for the future the class rate tariffs in official territory should ontain columns of rates bearing the following percentage relations to the first ass rates prescribed in this proceeding: 100, 92.5, 85, 77.5, 70, 65, 60, 55, 50, 40, 37.5, 35, 32.5, 30, 27.5, 25, 22.5, 20, 17.5, 16, 14.5, 13.

xamination of the comparative table which appears above shows at only to a slight extent have these percentages (other than those ed for the so-called regular classes) been carried into the several assifications before use for the purpose of providing classification tings additional to those of the regular classes. Flexibility, when nsidered necessary, has all but invariably been accomplished by aking an exception to the classification and thus removing the comodity from the classification, rather than by giving it a rating stated percentage of first class. This is so, although the feasibility of aking use of such intermediate percentages is evident from the fact at they have been so used, but not enough to avoid the whittling vay of the classification by the process of making exceptions thereto. he table shows that some of the percentage relations have not been ed in the official classification at all; if those percentages are used r the statement of rates, it is by the device of removing the comodity *pro tanto* from the classification and assigning it a rate in pecial tariff.

Although the proceeding in No. 28310 brings in issue only the ssifications, discussion of the differences as between them in ratings uld be purely academic without indicating in some degree the eft they have upon the rates in the various territories. A rating st be complemented by a class rate, and vice versa, in order to give bstance to either. Therefore, for the purpose of conveying some a of the effect that the classification differences have upon rates escribed in territories embraced in docket No. 28300, appendixes nd 3 to this report have been compiled, in which the rates for a gle distance are stated. The appendixes do not purport to show average territorial rate levels, because the progressions with disce in the scales in official, southern, and western territories differ some extent one from another, producing relations between the ritories varying with distance; and rate levels in certain parts of territories, such as in New England and the Florida peninsula, higher than in the major portions of the territories.

Appendixes 2 and 3, respectively, cover less than carload and carload ratings and rates, and each contains tables numbered I, II, and III, which deal with official versus southern, official versus western, and southern versus western classification ratings and intraterritorial rates. The ratings are those in effect August 3, 1942, except that southern versus western ratings as effective March 17, 1942, are used because August 3 data therefor are lacking.

Inasmuch as a high degree of uniformity already exists in the ratings above class 100, the comparisons in appendixes 2 and 3 are with class 100 and below, confined to the classes representing a substantial number of ratings. Article descriptive items covered are those proprovide with less-than-carload or carload ratings in each of the three classifications.

The class rates appearing in these appendixes are taken from the distance scales prescribed in the eastern, southern, and western revisions, subjected to the 10-percent general increase of 1938. Rates for 200 miles, the approximate average haul of revenue freight by class I railroads per line of railroad are used, although the average haul per shipment is longer, especially if heavy moving short-haul traffic that moves on commodity or exception rates is excluded. As representative of western territory, the rates for western trunk-line zone I are shown. The corresponding rates for zones II and III are higher by averages of about 14 and 25 percent, respectively. The latter scale was prescribed also for southwestern territory.

As will be observed from appendixes 2 and 3, the article ratings of a particular class in a given classification are found for the most part in the same class, or fairly close thereto, in the other classifications, and the remainder are distributed or scattered widely among other classes. But even where the ratings are the same, the rate effect differs substantially because of the variances in territorial rate levels.

Thus, the 616 articles rated class 55 in less than carloads in official classification, which move at a rate of 44 cents for 200 miles in official territory, are rated from classes 40 to 85 in southern classification on which the rates for 200 miles are from 45 to 95 cents in southern territory; 565 of the articles are, however, in class 55 in southern classification with rate of 62 cents. The same articles are rated from classes 55 to 85 in western classification, on which the rates for 200 miles in western trunk-line zone I range from 53 to 82 cents; 613 of the articles are, however, in class 55, with a rate of 53 cents for 200 miles.

The most important carload class in official territory is class 35, comprising 2,709 article ratings, on which the rate for 200 miles is 28 cents. Those articles are rated from classes 17½ to 55 in southern classification, and the rates thereon vary from 20 to 62 cents in southern erritory, but 1,646 ratings are in class 40 with a 45-cent rate. In estern classification, the carload ratings on such articles extend from lasses 17½ to 55, on which rates in zone I range from 17 to 53 cents, ith 2,115 of the ratings in class 37½, rate 36 cents.

Comparisons of mountain-Pacific with official and southern terri- ories, of the same nature as those in appendixes 2 and 3, would have ttle significance because the territories are not contiguous. A better ne is with the bordering western trunk-line zone III and southwestern rritory, in both of which zone III scale applies, and which bears rela- ons to the rates in zone I which are stated in appendixes 2 and 3. While one classification governs in these western territories and be- ween them, as stated the relations of the rates to class 100 of the regu- r 10 classes in mountain-Pacific territory are not the same as in the thers on classes below class 70.

Because the progression with distance of the maximum rates in the ale prescribed in several proceedings from and to points in virtually very part of mountain-Pacific territory differs materially from the rogressions in scales prescribed in the eastern, southern, and western visions, and the percentage relations between the regular classes also ffer (but ratings stated in percentages in western classification are e same in all western rate territories), rate comparisons for a single stance might tend to mislead. Therefore, in order to present some mparison, rates are set forth in the following tables that were pre- ribed in the territories and zones named for distances of 50, 100, 200 mployed in appendixes 2 and 3), 400, and 800 miles, subjected to the -percent general increase of 1938. The first table shows the 10 asses in mountain-Pacific territory, their percentage relations to t class as prescribed, and rates for the specified distances.[11] The cond table shows the rates in the other territories and zones on per- ntages corresponding to those prescribed for regular classes in ountain-Pacific territory:

Mountain-Pacific territory

ses	1	2	3	4	5	A	B	C	D	E
centages	100	85	70	60	50	50	40	30	25	20
s:										
0 miles	50	42	35	30	25	25	20	15	12	10
00 miles	77	66	54	46	39	39	31	23	20	15
00 miles	111	94	78	67	56	56	44	33	28	22
00 miles	171	145	120	103	86	86	68	51	43	34
00 miles	281	238	197	169	141	141	112	84	70	56

---

[11] At present in mountain-Pacific territory many class rates are lower than prescribed; class 5 is often a lower percentage of class 100 than is class A, for both of which reflecting 50 percent of first class were fixed.

Other territories and zones

Percentages	100	85	70	60	50	50	40	30	25

800 miles	222	189	155	133	111	111	89	67	56

Comparisons of similar character for interterritorial rates governe by the different classifications are not practicable because such rat vary greatly in amounts for like distances depending upon the propo tions thereof in the respective territories through which the rat making routes are computed. Interterritorial rates usually represe a blend of, or lamination derived from, the rate levels within t territories or zones concerned.

EXCEPTIONS TO CLASSIFICATIONS

In recent years the importance of the classifications as factors the determination of freight charges by rail has lessened. This sit ation has been brought about by the establishment of innumeral exceptions which take precedence over the classifications, and by t use of commodity rates. Normally the effect of the establishment a commodity rate is to exclude the application of the classificati and class rates which otherwise would apply and govern the comp tation of the charge. The level of ratings in exceptions and of co modity rates, as distinguished from the level of ratings in the clas fications, which is made by the respective classification committees determined by individual carriers or groups of carriers, and is fi upon consideration of principles usually different from those accord weight in the determination of classification ratings. Some of t reasons for the establishment of exceptions to the classifications the following: To meet motortruck and other competition: c venience and expedition in publication; to accomplish a more restricted application of particular rates; to remove or reduce the amount of differences between class rates and between less-than-carload and carload rates; and to provide a quicker and less burdensome method of complying with section 4 of the act. Many exceptions to the classifications are stated as percentages of first class, and they usually result in rates lower than would apply by the use of classification ratings.

The complete extent to which exceptions to the classifications have been established is not shown in the record. While in all territories, except the South, the greater part of less-than-carload tonnage moves subject to ratings in the classifications, it is generally conceded that as to carload traffic the exceptions have superseded the classifications in large degree. In comparison with other rate territories, the degree in mountain-Pacific territory is smaller. The volume of traffic in all territories which moves under rates subject to exception ratings greatly surpasses that subject to the classification ratings.

In southern territory, rates published as exceptions, or as "column" rates[12] both bearing definite relation to the first-class rates, apply to 644 articles; between southern and central territories, to 582 articles; between southern and Illinois territories, to 606 articles; between southern and trunk-line and New England territories, to 581 articles; between southern and southwestern territories, to 379 articles; and between southern and western trunk-line territories, to 222 articles when moving north-bound, and to 255 articles when moving south-bound. Many of the lower-grade, heavily loading commodities move in southern territory under commodity rates, which are not governed by classification ratings. During 1941, 38 percent of the total originated tonnage of class I railroads in the southern region was transported under such rates. It consisted of brick, cast-iron pipe, cement, lime, road aggregates, livestock, fertilizer, sulphuric acid, cotton, petroleum, iron and steel articles, scrap iron, lumber, and pulpwood.

On September 1, 1940, less-than-carload ratings on approximately 3,500 article descriptive items were established in exceptions to the southern classification that were lower than the classification ratings on such items, ostensibly to meet motortruck competition. On more than 200 of the items carload ratings of 1 regular class below that on less than carloads were published. The territorial application of the exceptions are coextensive with southern classification, or generally throughout southern territory, between southern and official territories, and from western trunk-line territory, including southern Missouri, to southern territory. These exceptions were to be incorporated in the southern classification as soon as practicable, but this had not been done when the hearings closed.

---

[12] In recent years, certain rates in the tariffs of the railroads have been designated therein as "column" rates, as for example, column 20. They are specific percentages of 100. In the example shown, column 20 means 20 percent of the first-class rate, which is 100 percent.

It is estimated that in Texas 50 percent of less-than-carload traffic and less than 10 percent of carload traffic move on classification ratings and class rates. Shippers in that State and in the Southwest are said to have little use for the classification ratings, and this seems to be so particularly as to carload traffic. Exceptions to the western classification applicable in the Southwest are published in a tariff which contains 86 columns of rates, including the 10 regular classes. ranging from 110 to 8.5 percent of first class. Exceptions in the form of 26 different percentage columns apply to 279 descriptions of less-than-carload traffic, and 70 different percentage columns apply to 919 descriptions of carload traffic. The exceptions also contain less-than-carload ratings lower than those determined by the classification on large groups of articles designated as mixtures, such as drugs and chemicals, hardware, and groceries, each mixture subject to a single rate.

The tariffs provide 86 columns of rates lower than first class for application in western trunk-line territory. Between that territory and central territory, in instances where the rates are governed by official classification and exceptions thereto, they provide 122 columns of rates lower than first class, and where the rates are governed by western classification and exceptions thereto, they provide 110 such columns of rates; on traffic between western trunk-line and southern territories, there are 98 columns of rates lower than first class south-bound and 66 columns of such rates north-bound.

An examination of 4 typical rate tariffs shows that 102 percentage columns of rates apply in official territory, 130 in southern territory, 89 in western trunk-line territory, and 85 in southwestern territory. The great number of columns is necessitated by the numerous different ratings in classification exceptions and by commodity rates. In some instances they were published to provide for the lesser percentage of increase authorized in general increases on certain traffic, such as agricultural products, irrespective of whether moving under class or commodity rates. Appropriate columns in the tariffs described above are used also for the numbered and lettered regular classes, of which 7, 12, and 10 have been prescribed for application in official, southern, and western territories, respectively, and for the percentage ratings in the classifications.

The evidence does not show the extent to which exceptions apply in official territory, but there are general statements to the effect that they are numerous and have extensive application, although les numerous than in other territories, and that they have been established principally to meet motortruck competition.

A study of the carload freight traffic of the railroads transported on 1 day was made and testified to by a member of our staff. The basis of the study was a tabulation of the waybills for September 23, 1942, showing the number of carloads of each commodity moved by rail on that day. The tabulation did not reveal the nature of the rate at which the commodity constituting a particular carload moved, and to supply this deficiency, the kind of rate, that is, whether class, exception or commodity, was supplied by our Bureau of Traffic according to the most probable rate charged. This study, while possessing many infirmities because of the lack of basic data, is the only evidence which purports to indicate the proportions of carload traffic moving on class, exception and commodity rates, respectively. It has not been successfully challenged as a reasonable approximation of the facts stated in detail.

The following table, compiled from the study, gives the distribution of carload traffic on September 23, 1942, for each of the major rate territories and interterritorially:

Territories (within, or from one to another)	Class rates	Exception rates	Commodity rates
	Percent	*Percent*	*Percent*
Official	5.8	17.6	76.7
Southern	1.8	6.0	92.2
Western trunk-line	0.6	0.2	99.2
Southwestern	2.4	4.4	93.2
Mountain-Pacific	1.7	(1)	98.3
Official to southern	12.6	36.3	51.1
Southern to official	0.9	4.9	94.2
Official to western trunk-line	12.3	35.4	52.3
Western trunk-line to official	3.1	1.0	95.1
Official to southwestern	22.5	52.0	25.5
Southwestern to official	1.5	3.4	95.9
Official to mountain-Pacific	11.3	(1)	88.7
Mountain-Pacific to official	0.7		99.3
Southern to western trunk-line	1.5	13.5	85.0
Western trunk-line to southern	6.1	3.1	90.8
Southern to southwestern	6.1	22.1	71.8
Southwestern to southern	1.2	4.3	94.5
Southern to mountain-Pacific	4.1	4.9	91.0
Mountain-Pacific to southern	1.5	0	98.5
Western trunk-line to southwestern	13.0	6.2	80.8
Southwestern to western trunk-line	2.0	3.0	95.0
Western trunk-line to mountain-Pacific	2.6	0	97.4
Mountain-Pacific to western trunk-line	0.7	0	99.3
Southwestern to mountain-Pacific	3.9	0	96.1
Mountain-Pacific to southwestern	2.1	0	97.9
All territories to official	4.8	14.4	80.8
Official to all territories	6.7	19.4	73.9
All territories to southern	4.1	11.9	84.0
Southern to all territories	2.1	6.2	91.7
All territories to western trunk-line	2.3	5.4	92.3
Western trunk-line to all territories	1.7	0.6	97.7
All territories to southwestern	5.6	10.6	83.8
Southwestern to all territories	2.0	3.9	94.1
All territories to mountain-Pacific	3.3	0.2	96.5
Mountain-Pacific to all territories	1.5	(1)	98.5
All territories to all territories	4.1	10.	85.2

SUGGESTIONS BY MEMBER OF OUR STAFF

Included in the evidence in this proceeding is a study made by a member of our staff, the assistant to the director of the Bureau of Traffic, entitled "Some Suggestions for Improvements in Railroad Class Rates." It contains principally suggestions for revision of the boundaries of the major freight-rate territories, and for reductions in the levels of the intraterritorial and interterritorial rates. The witness expressed the opinion that revision of the classification should not be attempted until revision of the class rates has been completed. As he proposes that the levels of the class rates should be reduced, the resulting loss of revenue must, in his opinion, be recouped by increases in the classification ratings. He suggests that the initiative of readjustments of the classifications be left to the railroads, and that in the selection of appropriate ratings the existing machinery for consulting interested shippers and the classification and rate committees be used. In order to permit the work to go forward in an orderly manner, the transfer from the old to the new scales of rates should be effected gradually by groups of commodities, and complete cancelation of the present class-rate scales should be deferred until the process has been finished.

It is his view that in reality the exceptions to the classification in all territories constitute the classifications, and that the truly exceptional traffic is that which moves at ratings in the classifications; hence in the revision he would substitute the exceptions for the classification ratings, subject to whatever adjustment might be necessary to preserve revenue.

Referring to the efforts to unify the several classifications, the witness stated that, considering classification in its narrow sense, much progress in that direction has been made, but the unification in fact has been largely factitious and the chief results has been to multiply classification exceptions in the South and West. He expresses the view that a closer approach to real uniformity will result if ratings are readjusted to move the traffic and the readjusted ratings are readjusted to move the traffic and the readjusted ratings published in the classifications rather than in the exceptions.

In his opinion a preliminary reform, which could and should be effected now, is to require all ratings in all classifications to be uniformly stated as that percentage of first class which they actually represent, and to eliminate the many ratings that are designated by a "confusing array of numbers, letters and other meaningless symbols."

RESPONDENTS' POSITION

The position of respondents is that complete classification uniformity is impracticable; that the existing classifications perform useful and necessary functions, and there has been no such departure from or disregard of the principles of freight classification generally recognized or observed in the past as to make the existing classifications obsolete, or to warrant a new revised classification. They point out that the descriptions of articles, packing requirements and rules are now uniform, that substantial uniformity exists as to the ratings class 70 and higher, and that the principal remaining differences are with respect to carload ratings. These differences are regarded ~~as~~ fundamental, and respondents oppose changing the ratings ~~solely~~ to achieve uniformity. They contend that commercial conditions would be disturbed by precipitate changes, their revenues would be seriously affected, and attainment of uniformity would cause demands for an even greater number of exceptions to the classification and of commodity rates than now exists. In their opinion, a uniform classification is not in the best interests of the carriers or of the shipping public.
